All information presented in this catalogue is correct except in the case of typing errors. DELTALAB S.L. reserves the right to alter the characteristics of products presented in our catalogue when said changes are beyond control of this company.

Dear Customers, Distributors, Suppliers and Friends,

It is a great occasion to address you through this new edition of DELTALAB's Catalogue 2025.

Deltalab member of SCGP, the Group of Companies situated in Europe and Asia, focus on providing labware, medical ware and laboratory solutions with advanced technology, through our history of 48 years. To date, it can be said that quality, innovation, product variety, and response to the requirements of our customers for ultimate satisfaction have shaped the essence of the value we provide as you can see in this DELTALAB'S Catalogue 2025.

At Deltalab member of SCGP, our people share a common mission and set of core values: innovation, quality, service, efficiency and sustainability. These are always linked and executed to our daily work, with emphasis on placing customers' priorities first. We think globally, act locally, and envision the next future. With our professional and creative team, we foresee, analyze, redesign, and develop the best solutions for accelerating research & innovation, improving healthcare and diagnostic challenges; automation, accuracy, reliability, speed-, promoting laboratory productivity and capability across industries, as well as taking responsibility to protect environment. Our continual strategies on increase in R&D and Innovation, co-creation with our stakeholders, investment in the right production scale of pioneer product, and keeping up with regulatory evolution are the key to success in the fast moving & competitive global markets. It is anticipate that these will enhance your success too.

We hope you find this new edition of our Catalogue to be useful tool to understand and appreciate the broad & remarkable scope of products that meet your needs and expectations. As we continue to bring new products to market, we also welcome the opportunity to collaborate on any product ideas you may have.

Your invaluable trust, collaboration and partnership are sincerely appreciated.

Pongsuda Pongtanya, PhD
Managing Director

Class I or Class Is (sterile) (low risk medical device)
- 
Directive 93/42/EEC or Regulation 2017/745
Class IIa (Moderate risk, sterile medical device)
- 
Regulation 2016/425
(Personal protective equipment)

The technical data (dimensions, capacities and resistances) specified in this catalogue are approximated.
The resistances (to chemical products, temperature, centrifugation...) may suffer variations depending on external conditions.
We recommend to test the product under the forecasted conditions of use. Please do not hesitate to ask for samples if necessary.

DELTALAB ISO CERTIFICATIONS

Deltalab's Quality Management System is certified as per ISO 9001:2015 and ISO 13485:2016 standards.

Since August 2019, Deltalab has been granted the **ISO 14001:2015 Certification**. This standard ensures that our companies have an Environmental Management System, which allows us to control the environmental impact of our products and activities. Deltalab, being a company **committed with the environment protection**, has decided to implement the mentioned Environmental Management System to reduce as much as possible the environmental impact.

The plastic materials of the products manufactured and commercialized by Deltalab are of high quality and are adequate to the needs of every product. For example, they are suitable for food contact, free of latex and other harmful substances such as heavy metals, phthalates, bisphenol or asbestos. Provided the products made of plastic are not chemically polluted, they are fully recyclable and biodegradable, and must be disposed of following the law in every country.

The packaging cardboard materials used in for the products commercialized by Deltalab are biodegradable and recyclable. To ensure a responsible management of the natural resources, these materials follow the FSC guidelines.

CE MARK OF MEDICAL DEVICES (MD) AND MEDICAL DEVICES FOR IN VITRO DIAGNOSTICS (IVD)

The CE Mark concerns those products that, affecting human beings, may involve a risk to their health. Therefore the CE Mark warrants that a product has been designed and manufactured so that it complies with the following requirements:

- **Does not compromise the health or clinical status of a patient.**
- **Does not endanger the user's health or safety.**
- **Does not compromise the health or safety of third parties.**
- **Minimizes the risk of errors of use thanks to its ergonomic features and the environment in which it is intended to be used.**
- **It takes into account the technical knowledge, expertise, experience, training, and medical and physical conditions of the intended users.**

The CE Mark requires that facilities, work organisation, and systems are subject to rigorous both internal and external quality controls. It also guarantees the highest level of safety when using those products intended for the sample collection and handling of human samples, directly and also for taking human clinical samples and their subsequent in vitro diagnosis.

The CE Mark guarantees that the products will be freely commercialised within the European Union.

MEDICAL DEVICES (MD)

According to Regulation UE N° 2017/745 on Medical Devices (that will replace Directive 93/42/CEE) a Medical Device is any instrument, apparatus, appliance, software, implant, reagent, material or other article intended by the manufacturer to be used, alone or in combination, for human beings for one or more of the following specific medical purposes:

- Diagnosis, prevention, monitoring, prediction, prognosis, treatment or alleviation of disease,
- Diagnosis, monitoring, treatment, alleviation of, or compensation for, an injury or disability,
- Investigation, replacement or modification of the anatomy or of a physiological or pathological process or state,
- Providing information by means of in vitro examination of specimen derived from the human body, including organ, blood and tissue donations, and which does not achieve its principal intended action by pharmacological, immunological or metabolic means, in or on the human body, but which may be assisted in its function by such means.

This Regulation, that will enter into force in May 2020, establishes 4 categories of medical devices, depending on the risk (time of contact and invasivity). DELTALAB manufactures and commercialises products of transient use classified as **Class I (sterile and non-sterile) and Class IIa:**

- **Class I (Non sterile):**

- **Low risk, invasive medical devices**

- It includes: non sterile tongue depressors, speculums, etc. Inspection gloves are considered both as MD Class I and PPE (Personal Protective Equipment). All of them are self-certification products, so No Notified Body is required.

- **Class I (sterile):**

- **Low risk, sterile, invasive medical devices**

- Among others: sterile tongue depressors, sterile Ayre spatulas, sterile cytology brushes, flocked swabs with and without transport media. They are certified by a Notified Body.

- **Class IIa (sterile):**

- **Moderated risk, sterile surgically invasive medical devices**

- This includes traditional swabs with and without transport medium and Deltaswab® flocked swabs with and without transport medium. Certification by a Notified Body is required.

- The CE Mark allows these swabs to be used in surgical operations as an invasive product.**

MEDICAL DEVICES FOR IN VITRO DIAGNOSTIC (IVD)

According to Regulation EU N° 2017/746 on medical devices for in vitro diagnosis (that will replace Directive 98/79/EC), an in vitro medical device is “any medical device which is a reagent, reagent product, calibrator, control material, kit, instrument, apparatus, piece of equipment, software or system, whether used alone, solely or principally for the purpose of providing information on one or more of the following:

- concerning a physiological or pathological process or state;
- concerning congenital physical or mental impairments;
- concerning the predisposition to a medical condition or a disease;
- to determine the safety and compatibility with potential recipients;
- to predict treatment response or reactions;
- to define or monitoring therapeutic measures.

Specimen receptacles shall also be deemed to be in vitro diagnostic medical devices;

Specimen receptacles means a device, whether of a vacuum-type or not, specifically intended by its manufacturer for the primary containment and preservation of specimens derived from the human body for the purpose of in vitro diagnostic examination. Examples: Urine analysis bottles, blood extraction tubes, tubes with means of transport for combined use with swabs, capillaries, enrichment media, etc.

Medical Devices for in vitro diagnosis are not considered material for general laboratory use .

PPE PRODUCTS (Personal Protective Equipment)

According to Regulation EU N° 2016/425m that repeals Directive 89/686/EEC, a PPE product is “any device or system to be worn or used by a human being, which protects him from one or various risks that may endanger his health and/or security”.

Security glasses and protection gloves are included. Inspection gloves are considered both as Medical Device and PPE as they protect the user while being a low risk, invasive medical device.

USEFUL INFORMATION

PRODUCT PACKAGING

SYMBOLS USED IN LABELING AND INFORMATION ON MEDICAL DEVICES

(in accordance with UNE-EN ISO 15223-1: 2016)

	Manufacturer		Do not use if package is damaged
	Manufacturing date		Temperature limit
	Batch code		Do not reuse
	Catalogue number		Consult instructions for use
	Sterilized using aseptic processing techniques		Caution
	Sterilized using ethylene oxide		In vitro diagnostic medical device

TRANSPORT

- **CONTAINERS: CAPACITY:**

- 20 feet: 28 m³ maximum
- 40 feet: 58 m³ maximum
- 40 HC feet: 68 m³ maximum

* Calculated package by package, not by pallet, for maximum space optimization.

- **PALLETS:**

- maximum air transport height: 1.50 m
- maximum height land transport: 2.40 m
- maximum height sea transport: 2.10 m
- width x depth european pallet: 80 x 120 cm
- width x depth american pallet: 100 x 120 cm

SALES CONDITIONS

- Goods are shipped at the purchaser's risk and on the purchaser's account.
- Goods are considered delivered, and at the responsibility of the purchaser, from their shipment from our warehouses. Any problem of transport or other is therefore the entire responsibility of the purchaser from that moment.
- Goods delivered are the property of DELTALAB S.L. until paid in full. In case of discrepancy, we will be governed by the courts of Barcelona.
- **MINIMUM ORDERING QUANTITY** (per total order): According to our price list.
- **MINIMUM ORDER QUANTITY** (per product): In those products indicated, it is possible to acquire minor quantities from the standard selling unit. In those cases, a surcharge is applied in order to cover the manipulation costs. Orders over the standard selling unit must be multiple of this standard selling unit. Orders must be in complete case quantities unless indicated otherwise.
- **ORDERS:** They must be made in writing, indicating the item code, name, units, price or offer. In case of doubt, the product code will take precedence.
- **CLAIMS AND RETURNS:** Any claim on the items in our catalogue must be made in writing within the deadlines indicated in the current price rate and its return requires the prior authorization of DELTALAB S.L. The customer must indicate the code, lot and delivery note number of the product subject to the claim.

Returns of products with sterile CE marking or items made of materials suitable for contact with food are not accepted.
- **PACKAGING:** Our products are properly packaged and coded (code, description, quantity and lot number). This catalog indicates weights and volumes in kilograms and cubic meters.
- **SPECIAL AND CUSTOM PRODUCTS:** We can supply some customized products, with another cap colour, other containers or packaging, etc. Consult our sales department.

You can see our current complete sales conditions at DELTALABs Price list

For reasons which are beyond our control we reserve the right to modify the product specifications.

01. MICROBIOLOGY

SWABS FOR MICROBIOLOGICAL SAMPLING

- Swabs are used for biological sampling.
- Specially used for processing samples which, after being coloured, will be analysed by microscopy.
- Also suitable for isolations in culture medium.
- Another important use is its capacity to spread dishes by dissemination techniques (for example for susceptibility testing by Kirby-Bauer or by E-test).

STERILE SWABS

The swabs intended for the collection and transport of microbiological samples are considered invasive medical devices for temporary use. As such, they comply with the safety and performance requirements determined by EU Regulation 2017/745 (on medical devices).

According to the rules of classification of this Regulation these swabs belong to class IIa since they are of surgical use.

The **Centro Nacional de Certificación de Productos Sanitarios** (CNCps - ON nº0318) is the institution who notified these swabs.

QUALITY STANDARDS – REQUIREMENTS FULFILLED BY STERILE SWABS

1. UNE-EN ISO 556-1 Sanitary products sterilisation. Requirements to be designed as “STERILE”. Part 1: sterilized sanitary products requirements. Requirements for medical devices in their terminal state.
2. UNE-EN ISO 868-5 Packaging materials for medical devices sterilised in their final stage. Part 5: Sealable bags and rolls made of porous materials and plastic film. Requirements and test methods.
3. UNE-EN ISO 11737-1 Sterilization of medical devices. Microbiological methods. Part 1: determination of a population of microorganisms.
4. UNE-EN ISO 11737-2 Sterilization of medical devices. Microbiological methods. Part 2: Sterility tests performed for the definition, validation and maintenance of a sterilization process.
5. UNE-EN ISO 11135-1 Sterilization of medical devices. Ethylene oxide. Part 1: requirements for development, validation and control of the routine of a sterilization process of medical devices.
6. UNE-EN ISO 11137-1 Sterilization of health care products. Radiation. Part 1: requirements for the development, validation, and control of the routine of a sterilization process of PS.
7. UNE-EN ISO 11137-2 Sterilization of health care products. Radiation. Part 2: setting the sterilization dose.
8. UNE-EN ISO 15223-1 Sanitary products. Symbols to use on labels, labelling and information to be supplied. Part 1: general requirements.
9. UNE-EN ISO 14971 Sanitary products. Application of risk on management.
10. UNE-EN ISO 13485 Sanitary products. Systems of quality management. Requirements for regulatory purposes.

SWABS USE ACCORDING TO THE MATERIAL

SWAB HEADS

Made of various materials, including cotton, polyester and viscose. Each swab contains more or less 0.04g of fiber and its absorption capacity is 0.2-0.3ml, with cotton usually having a better absorption of liquid, although the difference is minimal.

- **Cotton/Pure Cotton:**

Fibrous substance, white and soft. Being a vegetable fiber can include traces of some substance (fatty acids, oils, etc.) that affect labile or demanding microorganisms.

- **Polyester (Dacron):**

For use in direct antigen, PCR, IFA tests. Its drawback is that it contains fatty acids and inhibitory detergents. It has flame retardant properties.

- **Viscose (Rayon):**

Artificial silk obtained from cellulose. It is a more aseptic material and the one with less inhibitory effects has in bacterial growth. Therefore, it is the best material for cell recovery.

- **Flocked fibres:**

Material with high absorption and overall sample elution.

SWABS SHAFT

The shaft is available in different materials according to its application: In wood, in polystyrene (breakable without leaving splinters) and also in aluminum.

PRESENTATIONS

<p>In bulk: the non-sterile swabs presented in bags of 100 units.</p>	<p>Peel-pack package: Plastic unit bag - plastic or medical paper - plastic (according to reference).</p>	<p>Flow-pack package: single bag. Polypropylene bioriented bag.</p>	<p>Package in polypropylene tube: The product is identified on the label, that acts as a seal.</p>

All the above packages have the following parameters printed on: product code, product description, lot number, expiry date, CE mark, manufacturer name and address, sterilisation method and single use mark (Ⓢ).

TRADITIONAL SWABS WITHOUT TRANSPORT MEDIUM

Non sterile swabs

Non-sterile swabs presented in bags of 100 units, except code **300205**, supplied bulk.

Dimensions:

300232: 200 x 2.5 mm. Tip 5 mm de diameter.

300230: 150 x 2.2 mm. Tip 5 mm de diameter.

300260: 150 x 2.5 mm. Tip 5 mm de diameter.

300260.1: 150 x 2.5 mm. Tip 5 mm de diameter.

300243: 147 x 2.5 mm. Tip 5 mm de diameter.

300205: 147 x 2.2 mm.

Model **300232** is longer than the traditional swabs and is designed for those hard to reach places.

For use in **gynaecology** when taking endocervical cells while using the speculum.

code	shaft material	tip material	case quantity	case weight	case volume
300232	extra large wood (200 mm)	cotton	80 x 100	5.0	0.032
300230	standard wood (150 mm)	cotton	100 x 100	4.65	0.032
300260	polypropylene	cotton	40 x 100	2.5	0.012
300260.1	polystyrene	viscose	40 x 100	2.5	0.014
300243	aluminum	cotton	100 x 100	2.8	0.005
300205*	wooden shaft only	-	1 x 1,000	2.5	0.010

* Non CE product.

Expiry date: 60 months

Sterile swabs

Sterile swabs individually wrapped in peel-pack or flow pack, depending on the model. **Sterilized.**

For use when samples do not need to be transported.

It is recommended our transport swabs in tubes when sample transport is required (see next page).

1. Flow-pack: plastic.
2. Peel-pack: plastic + plastic.

A: Wood
B: Snappable polystyrene
C: Aluminum

code	shaft material	tip material	sterile	package	case quantity	case weight	case volume
300200	wood	cotton	STERILE R	peel-pack	2 x 1,000	2.25	0.029
310200	wood	cotton	STERILE R	flow-pack	2 x 1,000	2.60	0.029
300201	snappable PS	cotton	STERILE R	peel-pack	2 x 1,000	3.52	0.027
300202	snappable PS	viscose	STERILE R	peel-pack	2 x 1,000	3.50	0.029
310202	snappable PS	viscose	STERILE R	flow-pack	2 x 1,000	2.02	0.029
300203	aluminum	cotton	STERILE EO	peel-pack	2 x 1,000	2.40	0.029

Cases per pallet: 54.

Expiry date: 48 month.

Sterile swabs (2 units)

Two Sterile swabs wrapped in peel-pack, depending on the model. **Sterilized by ethylene oxide.**

One swab is designed for cleaning the sampling area.

The other swab is designed for sample collection.

For use when samples do not need to be transported.

It is recommended our transport swabs in tubes when sample transport is required 1,000 peel-packs with 2 units each one per case.

Peel-pack: medical paper + plastic.

code	shaft material	tip material	sterile	package	case quantity	case weight	case volume
300210	wood	cotton	STERILE EO	peel-pack	1.000	2.65	0.024
300212.1	snappable PS	viscose	STERILE EO	peel-pack	1.000 peels	2.72	0.025

Cases per pallet: 54.

Expiry date: 48 month.

Sterile swab in round tube

Sterile dry swabs supplied in shockproof round bottom polypropylene tube, with a label sealing the cap.

Dimensions of tube: Ø 13 x 165 mm.

Sterilized by ethylene oxide.

code	shaft material	tip material	case quantity	case weight	case volume	cases per pallet
300250	wood	cotton	4 x 500	14.00	0.060	24
300261	snappable PS	cotton	4 x 500	14.90	0.070	24
300252	snappable PS	viscose	4 x 500	15.00	0.066	24
300263	snappable PS	polyester	4 x 500	15.00	0.062	24
300251	aluminum	cotton	4 x 500	15.00	0.066	24
300253	aluminum	viscose	4 x 500	13.90	0.070	24

Expiry date: 48 months

Human DNAsa, RNAsa and DNA free certified swabs, sterile

Human DNA free Certified. Sterilized by ethylene oxide.

The swab is supplied in a polypropylene tube, which protects the sample up to the laboratory prior to its analysis. The stick of the swab is made of polystyrene while the head is produced with viscose or polyester according to the code. The tube is labeled indicating code, description, lot, expiry date and providing an identifying area to note down collection details (site, date, etc.). Moreover, the label seals the tube with the cap of the swab, acting like a tamper evident system.

code	shaft material	tip material	selling unit	case quantity	case weight	case volume
300252DNA	polystyrene	viscose	500	4 x 500	14.20	0.070

Expiry date: 48 months

This product is not considered a medical device and does not carry CE marking because it is not for a subsequent diagnosis of a pathology, but is designed for saliva sampling, for genetic analysis (identification of human DNA) within the scope of the investigation and the forensic market.

TRANSPORT SWABS WITH MEDIA

Manufactured in Clean Room
+
Sterilized by Radiation

Safety

- Paperless, plastic peel-pack is an extraordinary safe system to maintain pack integrity and sterility

Comfort

- Space saving
- Collapsible internal case
- Easy warehouse identification
- Selling unit easy to commercialize
- New standardised pack quantity for all our swabs
- The peel-pack has a small slit at the top to allow easy opening

Information

- Full range of transport medias listed on the package
- Clear dual CE Marking IVD + MD printed in both, peel-pack and case
- Instructions for use printed on the peel-pack and on the inner box. Also available online.

Design

- Attractive peel-pack and friendly users guide
- Dimensions of the peel-pack: 38 x 210 mm
- Eye-catching case designed exclusively for swabs
- Drawings of a swab and a tube on both the peel-pack and the case for first sight identification

Traceability

- Each single peel-pack is printed with the catalogue number, UDI, lot number, expiry date and product description.
- Both external and internal cases are also identified with catalogue number, UDI, lot number, expiry date and product description.

Environmentally friendly

- Peel pack made of one material only: easy recycling!

CE SWABS:

As the two main components of a transport swab have different purposes and different ways of interaction with the patient, both have different CE treatment:

1. **Swab:** for microbiological sample collection. As a surgical invasive product of temporary use, is classified as CLASS IIa product in compliance with EU Regulation 2017/745.
2. **Tube:** with transport and preservation media container facilitator of survival and transport of biological samples prior to analysis. Classified as in vitro diagnostic IVD (according to EU Regulation No. 2017/746, which replace Directive 98/79/EC).

TRANSPORT MEDIA:

The media used to transport the sample, has the appropriate chemical composition that maintains the bioburden levels with the minimum physiological activity, achieving thus the minimal quantitative and qualitative variation of the sample from the collection to its analysis.

COMPONENTS:

Each set consists in a tube and a swab, packed in a peel-pack bag (A) and sterilized by radiation.

- (B) **Tube with transport media:** Made of rigid polypropylene with round bottom.
- (C) Polyethylene **cap** specially designed to close hermetically; non slippery surface when using gloves.
- (D) Coloured **label** in each tube with the following parameters printed: transport media type, sterilisation method, manufacturer name, CE mark, "single use" and "see the instructions" marks, lot number and expiry date, as well as spaces to write patient name, date, time, medical report number, source and kind of sample. The label seals the cap and the tube.
- (E) **Swab** fitted in a second cap with a shaft which ends in a tip of synthetic or organic material hardly adhered to the shaft. The cap provides a leakproof seal after sample collection.

Both the peel-pack package and the label of the tube are printed with the following information: transport media type, sterilization method, manufacturer name, CE mark, "single use" and "see the instructions" marks, lot number, and expiry date. Peel pack also includes UDI.

Amies. Sterile

Universal transport media for bacteria in microbiological samples. It is a modification of the medium Cary Blair, itself of the medium Stuart. Basically, the glycerophosphate is changed from the original composition to inorganic phosphate and methylene blue for neutral pharmaceutical coal. In addition, it adds calcium and magnesium ions, which help preserve the permeability of the bacterial cell. This media assures the viability of organisms such as:

- Neisseria sp.
- Haemophilus sp.
- Corynebacterium sp.
- Trichomonas vaginalis*
- Streptococcus pyogenes*
- Streptococcus pneumoniae*
- Shigella flexneri*
- Salmonella typhi*
- Brucella abortus*
- Enterobacterias, etc.

The presence of charcoal on the media neutralises inhibitors and bacterial toxins, and improves the recovery ratio of *Neisseria gonorrhoeae* and *Vibrio cholerae*

Some microorganisms can resist on the media for up to 3 days, although the recovery of microorganisms is better if cultured in the first 24 hours. Amies transport swabs are available with or without charcoal.

Swabs are sterilized by radiation.

Expiry date: 30 months.

code	shaft material	tip material	case quantity	case weight	case volume
300287	snappable PS	viscose	6 x 100	9.33	0.059
300285*	snappable PS	viscose	6 x 100	9.37	0.058
300281	aluminum	viscose	6 x 100	9.08	0.056
300281/1*	aluminum	viscose	6 x 100	9.15	0.052

*Amies with charcoal included.
Cases per pallet: 32.

Liquid Amies. Sterile

This is a variation of the traditional Amies media swab where the media is presented as liquid form without agar.

Suitable for conservation of pathogens such as:

- Haemophilus sp.
- Corynebacterium sp.
- Trichomonas vaginalis*
- Streptococcus pyogenes*
- Streptococcus pneumoniae*
- Shigella flexneri*
- Salmonella typhi*
- Brucella abortus*
- Neisseria gonorrhoeae*
- Staphylococcus epidermidis*
- Escherichia coli, etc.

Swabs are sterilized by radiation.

Expiry date: 30 months.

code	shaft material	tip material	case quantity	case weight	case volume
300284.SE	snappable PS	viscose	6 x 100	7.60	0.055

Cases per pallet: 32.

Stuart swabs. Sterile

The modified Stuart media allows the conservation and transportation of a large number of pathological microorganisms, such as:

- Neisseria gonorrhoeae*
- Haemophilus influenzae*
- Neisseria meningitidis*
- Bordetella pertusis*
- Corynebacterium diphtheriae*
- Trichomonas vaginalis*
- Staphylococcus aureus*
- Streptococcus* sp.
- Salmonella* sp.
- Shigella* sp.
- etc.

The most unstable organisms will remain viable for up to 24 hours and other for several days. The media is reduced due to the presence of thioglycolate, which diffcults the enzymatic reactions of the bacteria. The multiplication of the bacteria is prevented due to the lack of nitrogen in the media.

Swabs are **sterilized by radiation**.

Expiry date: 30 months from sterilisation date.

code	shaft material	tip material	case quantity	case weight	case volume
300290	wood	cotton	6 x 100	9.40	0.057
300291	aluminum	cotton	6 x 100	9.10	0.057
300295	snappable PS	viscose	6 x 100	8.65	0.060

Cases per pallet: 32.

Cary Blair. Sterile

Cary Blair is another modification of Stuart media.

The glycerophosphate has been substituted by inorganic phosphate since glycerophosphate is a metabolite for some bacteria, so they could grow and disperse the pathogens amount.

The methylene blue has also been removed and the pH increased to 8.4. This is a media originally developed for faecal samples but is also used successfully for anaerobic transport, such as:

- Neisseria gonorrhoeae*
- Vibrio cholerae*
- Vibrio parahaemolyticus*
- Haemophilus influenzae*
- Neisseria meningitidis*
- Streptococcus pneumoniae*
- Shigella flexneri*
- Pasteurella pestis*
- Campylobacter* Spp., etc.

Swabs are **sterilized by radiation**.

Expiry date: 30 months from sterilization date.

code	shaft material	tip material	case quantity	case weight	case volume

300280.2	snappable PS	viscose	6 x 100	8.50	0.056

Cases per pallet: 32.

Chlamydia. Sterile

Liquid media, suitable for Chlamydia.
For cervical samples it is recommended to firstly use a dry swab to clear the cervical channel.

Sterilized by radiation.
Expiry date: 12 months.

code	shaft material	tip material	case quantity	case weight	case volume
300299.SE	snappable PS	polyester	6 x 100	7.80	0.056

Minimum order quantity: 100 units.
Cases per pallet: 32.

FLOCKED SWABS WITHOUT TRANSPORT MEDIUM

Deltalab offers a wide range of flocked swabs, with or without breaking point, that perform the most efficient absorption and elution for the collection of microbiological samples. These swabs are presented in tube or flow-pack without transport medium.

mod.	code	description	breakpoint mm	case quantity	case weight	case volume
1	300264	Dry swab PS + flocked standard 100mm in tube	100 mm	4 x 500	14.20	0.065
2	300267	Dry swab PS + flocked nasopharyngeal 100mm in tube	100 mm	4 x 500	14.20	0.065
3	310206K	Dry swab PS + flocked standard 80mm in Flow-pack	80 mm	2 x 1000	2.02	0.029
4	310207K	Dry swab PS + flocked nasopharyngeal 80mm in Flow-pack	80 mm	2 x 1000	2.02	0.029

FLOCKED BRUSHES WITH LIQUID TRANSPORT MEDIUM

Range of swabs for the collection and transport of microbiological samples in liquid medium. The Deltaswabs system is compatible with automation equipment for inoculation and seeding of samples, as well as with molecular diagnostic techniques. Compared to traditional swabs, with this range we obtain:

1. Greater reliability in sample recovery: high absorption and elution capacity of the flocked swab.
2. Greater sample viability since it remains completely suspended in the medium.
3. It allows obtaining different homogeneous inocula from the same sample.
4. It adapts to any work protocol.

In addition, possible cross-contamination is minimized due to less handling and maximum tightness. The patient obtains greater comfort thanks to the softer swab cover. The Deltaswab system allows direct spreading on the slide, as it does not contain the agar medium and ensures the correct transport and storage of samples both at room temperature (20°C-25°C) and at refrigeration temperature (4°C-8°C).

FLOCKED SWABS WITH LIQUID TRANSPORT MEDIUM

Amies

Particularly suited for microbiological sample collection and transport. It maintains the viability of Aerobes, Facultative Anaerobes and Anaerobes Bacteria for a minimum of 48 hours both at room temperature (20-25°C) and at refrigeration temperature (2-8°C) and 24 hours with Fastidious Bacteria, following CLSI Quality Control of Microbiology Transport System: Approved Standard - Second Edition. Designed both for traditional and automated sample streaking.

Compatible with the molecular diagnostic techniques and for direct extension on glass slides.

Peel-pack package.

Brush: radiation sterile.

Tube: sterile by aseptic techniques.

mod.	code	ml	description	breakpoint mm	case quantity	case weight	case volume
1	304221KF	1	with standard flocked swab	80	6 x 100	5.6	0.056
2	304222KF	1	with urethral flocked swab	80	6 x 100	5.6	0.056
3	304223KF	1	with nasopharyngeal flocked swab	80	6 x 100	5.7	0.056
4	304224KF	1	with minitip flocked swab	80	6 x 100	5.7	0.056
3	304225F	1	with nasopharyngeal flocked swab	100	6 x 100	5.6	0.056

Expiry date: 30 months.

Cary Blair

Specially suited for the collection and transport of faecal samples. Maintains the viability of the fecal pathogens for a minimum of 48 hours without overgrowth, following CLSI Quality Control of Microbiology Transport System: Approved Standard - Second Edition. Designed for carrying out sample collection directly from the rectum or from faeces.

Designed for traditional and automated sample streaking. Compatible with the molecular diagnostic techniques by PCR and for direct extension on glass slides.

Peel-pack package.

Brush: radiation sterile.

Tube: sterile by aseptic techniques.

code	ml	description	breakpoint mm	case quantity	case weight	case volume
304260KF	2	with standard flocked swab	80	6 x 100	6.3	0.056

Expiry date: 24 months.

VICUM®

Particularly suited for collecting and transporting microbiological samples which contain Virus, Chlamydia, Ureaplasma and/or Mycoplasma. Includes antibiotics which inhibit the growth of Bacteria and Fungi; this ensures reliability in terms of sample recovery. Maintains the infectability of viruses for a minimum of 96 hours both at room temperature (20-25°C) and at refrigeration temperature (2-8°C), following CLSI Quality Control of Microbiology Transport System: Approved Standard - Second Edition. Each tube contains glass beads to facilitate cell lysis, sample homogeneousness and maximize the elution of the sample from the swab. Designed for cell cultivation and compatible with molecular diagnostic techniques by quantitative PCR.

Flow-pack package, except for code 304233.2S presented in peel-pack.

Brush: radiation sterile.

Tube: sterile by aseptic techniques.

mod.	code	ml	description	breakpoint mm	case quantity	case weight	case volume

Expiry date: 24 months

Virus

Particularly suited for collecting and transporting microbiological samples which contain viruses. By including antibiotics which inhibit the growth of Bacteria and Fungi, it ensures the trustworthiness of the sample.

It maintains the infectability of viruses for up to 96 hours, both at room temperature (20-25°C) and at refrigeration temperature (4-8°C), following CLSI Quality Control of Microbiology Transport System: Approved Standard - Second Edition.

Designed for cell cultivation and to be compatible with the molecular diagnostic techniques by quantitative PCR.

Peel-pack package.

Brush: radiation sterile.

Tube: sterile by aseptic techniques.

mod.	code	ml	description	breakpoint mm	case quantity	case weight	case volume

Expiry date: 18 months

ENRICHMENT MEDIA

LIM Broth

Selective enrichment medium for Group B Streptococcus, including *S. agalactiae*. The kit consists of a tube with conical bottom, skirted and screw cap, containing 2 ml LIM broth, and a standard flocked swab. Packed in peel pack (plastic peel pack) with the basic information and instructions printed.

Brush: radiation sterile.
Tube: sterile by aseptic techniques.

code	description	tube height mm	cap Ø mm	case quantity	case weight	case volume
304213KF	2 ml LIM	82.6	16.6	6 x 90	6.59	0.056

Expiry date: 16 months

Selenite

Enrichment medium that inhibits the proliferation of bacterial microbiote. It is particularly suited for isolating *Salmonella* from faecal samples, food and/or water. It is used as an enrichment medium for clinical and industrial samples. Easy and practical. Compatible with manual and automated systems of microbiological culture and suitable for molecular assays.

Sterile by aseptic techniques.

code	description	tube height mm	cap Ø mm	case quantity	case weight	case volume
304210	2 ml Selenite	82.6	16.6	6 x 60	2.84	0.025

Expiry date: 24 months

Thioglycolate

Widely used enrichment medium for isolation and cultivation of Aerobic and Anaerobic Bacteria and Fastidious Bacteria. It is used as an enrichment media for clinical samples. Easy and practical. Compatible with manual and automated systems of microbiological culture and suitable for molecular assays.

Sterile by aseptic techniques.

code	description	tube height mm	cap Ø mm	case quantity	case weight	case volume
304211	2 ml Thioglycolate	82.6	16.6	6 x 60	2.84	0.025

Expiry date: 12 months

CRYOINSTANT: Cryoplashes for the conservation of microbiological strains

Sterile system for the conservation of microbiological strains (for example, fungi in sporulation phase), consisting of a 2 ml cryovial with a skirt, containing 25 glass cryoprobes treated with cryoprotectants that act as a preservative.

Thanks to this system we can:

- Have a **perfect medium of conservation**
- Obtain up to **25 replicas** of the same microbial generation to use progressively for years
- Facilitate the inoculation of the bacteriological medium, since each pearl is equivalent to a culture
- Avoid the defrosting of the entire vial every time we extract a pearl
- Avoid the formation of ice crystals in recovery
- **Minimize the risk of cross contamination**
- **Save freezer space**

COMPONENTS

The cryovial is made of polypropylene and is externally threaded. Resists up to **-190 °C**. Long skirt cap, with silicone gasket To facilitate the classification of samples, our cryovials are offered with caps and pearls in five different colors (except code 409113/6, which is an assortment).

This system allows rapid identification of the sample, differentiating each type of microorganism according to the colour of the cap and the pearl. The cryovials are presented in a rack of 100 units, made of cardboard resistant to **-100 °C**. Each box is supplied labeled with indication of code, batch, expiration, cap colour, and shrink wrapped.

Rack dimensions: 150 x 150 x 55mm. (More information about these boxes on page 214. See code M-600).

Expiration: 48 months from the date of manufacture. **Sterile by autoclave.**

HOW TO USE

1. Take the strain sample using a loop (see our loops on page 38 and 39).
2. Inoculate the vial by inserting the loop into the preservative medium.
3. Close the vial and shake it gently so that the strain is impregnated in the cryoplashes.
4. Extract the remaining preservative medium using a Pasteur pipette (see our Pasteur pipettes on pages 198-203).
5. Close the cryovial and freeze.
6. Every time we want to reproduce the strain, we will extract one of the cryoplashes with a loop or a clamp.
7. We will place the cryop pearl on a plate with medium, ensuring that the entire surface of the pearl enters in contact with the medium.

Self-sampling kits for the detection of sexually transmitted diseases

Detalab presents the new self-sampling kits for the diagnosis of sexually transmitted infections.

These kits are designed and prepared so that the non-professional user can take the sample or samples from his or her own body without any difficulty.

The self-sampling kit facilitates the diagnosis of this type of diseases, avoiding any embarrassment on the part of the affected person, who can take the sample calmly and privately in their own safe space.

Nasal self-sampling kit with virus medium

Sterile invasive system for self-sampling with virus transport medium for subsequent microbiological analysis. Especially indicated for the collection and transport of microbiological samples containing viruses. By including antibiotics that inhibit the growth of bacteria and fungi, it ensures suitability in sample recovery. Maintains the viability of viruses for up to 96 hours both at room temperature and refrigeration. Designed for cell culture and to be compatible with molecular diagnostic techniques.

- Tube with 3 ml of virus transport medium with a mauve cap indicating the type of transport medium.
- Standard flocked swab with a breaking point at 80 mm.
- Presentation in peel-pack.

code	description	case quantity	case weight	case volume
304244K	3 ml virus medium + standard flocked swab	6 x 60	2.84	0.025

Regulation (EU) 2017/745 on medical devices (MDR). **Expiry date:** 18 months.

Kit for the detection of sexually transmitted infections

Sterile invasive system for self-sampling by direct contact with the patient, with and without transport medium, for the purpose of subsequent in vitro diagnostic testing. The product is intended for use by lay users (non-professionals). Product intended for self-sampling in different anatomical areas oral (A), vaginal/ urethral (B) and rectal (C).

- 3 sets 304221KF consisting of a standard swab + tube with AMIES transport medium.
- 2 sets 304238KF consisting of a standard swab + tube with VICUM® transport medium.
- 1 set E300016KP.2 consisting of two thin swabs.
- Stickers labelled A, B1, B2 or C to stick to the tubes with transport medium after taking the samples.

code	description	case quantity	case weight	case volume
200390	(3 sets) 304221KF + (2 sets) 304238KF + (1 set) E300016KP.2	14	4.00	0.056

Regulation (EU) 2017/745 on medical devices (MDR). **Expiry date:** 24 months.

Vaginal self-sampling kit

Sterile invasive product for self-collection of vaginal samples by lay users for subsequent sending to the clinical laboratory, for the purpose of performing a subsequent examination by in vitro diagnosis.

- A standard flocked swab with a breaking point at 100 mm.
- 12ml round-bottom tube with skirt, in a single bag.
- Presentation of the set in peel-pack.

code	description	case quantity	case weight	case volume
1 200391	standard flocked brush bagged in flow-pack + 12ml tube	6 x 60	2.84	0.025
2 200392	standard flocked brush in tube + 12ml tube	6 x 60	2.84	0.025

Regulation (EU) 2017/745 on medical devices (MDR). **Expiry date:** 48 months.

Surface control for the food industry

MICROBIOLOGY

The presence of pathogenic microorganisms in controlled environments in manufacturing facilities can be detrimental to the final product, the consumer, as well as the company. Bacteria, molds and yeasts are found everywhere in our environment.

DeltaKlean is a variant of the swab sampling method, as it combines the swab test with a specific culture medium, and provides us with a result of the presence or absence of the target microorganism.

A reliable, convenient and easy-to-perform analysis and control system that will take food safety to the next level.

Swab for surface control: Aerobic

Swab with culture medium and growth indicator for the analysis of microbial load directly from surfaces. The medium includes an additive to indicate biological activity.

Interpretation of results

A colour change from yellow to pink is indicative of moderate microbial growth on the surface. A colour change from yellow to red is indicative of heavy microbial growth on the surface.

Absence of microbial growth

Moderate microbial growth

Strong microbial growth

Microbiological control

Staphylococcus aureus ATCC® 25923, WDCM 00034: Good - medium pink/red.

Escherichia coli ATCC® 25922, WDCM 00013: Good - medium pink/red.

Enterococcus faecalis ATCC® 19433, WDCM 00009: Good - medium pink/red.

Proteus mirabilis ATCC® 29906, WDCM 00023: Good - medium pink/red.

Detection range of 10-50 CFU.

Incubation at 37±1°C reading at 18-24 h.

code	description	case quantity	case weight	case volume
200180	Swabs for Aerobic control	25	2.84	0.025

Swab for surface control: Listeria spp

Swab with culture medium and growth indicator for the detection of Listeria spp. directly from surfaces. The medium includes a pH indicator to indicate biological activity.

Interpretation of results

A colour change from amber to black is indicative of the presence of Listeria spp. on the surface.

Absence of Listeria spp.

Presence of Listeria spp.

Microbiological control

Escherichia coli ATCC® 25922, WDCM 00013: Inhibited - yellow medium.

Enterococcus faecalis ATCC® 19433, WDCM 00009: Inhibited - yellow medium.

L. monocytogenes ATCC® 35152, WDCM 00109: Good - black medium.

Listeria innocua ATCC® 33090, WDCM 00017: Good - black medium.

Detection range of 10-50 CFU.

Incubation at 37±1°C reading at 18-24 h.

code	description	case quantity	case weight	case volume
200181	Swabs for control of Listeria spp	25	2.84	0.025

Swab for surface control: Salmonella spp

Swab with culture medium and growth indicator for the detection of *Salmonella* spp. directly from surfaces. The medium includes a pH indicator to indicate biological activity.

Interpretation of results

A colour change from red to red/black is indicative of the presence of *Salmonella* spp on the surface. A colour change from red to yellow/black is indicative of the presence of Coliforms on the surface.

Absence of *Salmonella* spp

Presence of *Salmonella* spp

Absence of Coliforms

Microbiological control

Salmonella typhimurium ATCC® 14028, WDCM 00031: Good - medium black/red.

Salmonella enterica ATCC® 13076, WDCM 00030: Good - medium black/red.

Escherichia coli ATCC® 25922, WDCM 00013: Good - medium yellow.

Citrobacter freundii ATCC® 8090: Good - medium yellow.

Shigella flexneri ATCC® 12022: Good - medium yellow.

Enterococcus faecalis ATCC® 29212, WDCM 00087: Inhibited - medium red.

Detection range of 10-50 CFU.

Incubation at 37±1°C reading at 18-24 h.

code	description	case quantity	case weight	case volume
200182	Swabs for <i>Salmonella</i> spp control	25	2.84	0.025

Swab for surface control: Molds and yeasts

Swab with culture medium and growth indicator for the analysis of moulds and yeasts directly from surfaces. The medium incorporates a pH indicator to indicate biological activity.

Interpretation of results

A colour change from violet to amber is indicative of molds and/or yeasts on the surface.

Absence of yeasts and/or molds

Presence of yeasts and/or molds

Microbiological control

Escherichia coli ATCC® 25922, WDCM 00013: Inhibited - medium violet.

Enterococcus faecalis ATCC® 19433, WDCM 00009: Inhibited - medium violet.

Candida albicans ATCC® 10231, WDCM 00054: Good - medium yellow.

Aspergillus brasiliensis ATCC® 16404, WDCM 00053: Good - medium yellow.

S. cerevisiae ATCC® 9763, WDCM 00058: Good - medium yellow.

Detection range of 10-50 CFU.

Incubation at 37±1°C reading at 18-24 h.

code	description	case quantity	case weight	case volume
200183	Swabs for mold and yeast control	25	2.84	0.025

Swab for surface control: E.Coli and Coliforms

Swab with culture medium and growth indicator for the detection of E. coli and coliforms directly from surfaces. The medium includes a pH indicator to indicate biological activity.

Interpretation of results

A colour change from yellow to green is indicative of the presence of Coliforms on the surface. A colour change from yellow to blue in the presence of UV-A fluorescence is indicative of the presence of E. coli on the surface.

Absence of E.Coli and Coliforms

Presence de Coliforms

Presence de E.Coli

Microbiological control

Escherichia coli ATCC® 25922, WDCM 00013: Good - Medium blue - Fluorescence.

Escherichia coli ATCC® 8739, WDCM 00012: Good - Medium blue - Fluorescence.

Citrobacter freundii ATCC® 43864, WDCM 00006: Good - Medium blue -

No fluorescence.

Detection range of 10-50 CFU.

Incubation at 37±1°C reading at 18-24 h.

code	description	case quantity	case weight	case volume
200184	Swabs for E. Coli and Coliform control	25	2.84	0.025

Surface Kit

Surface kits are supplied with a swab and a tube containing a buffered broth with neutralising agents. Kits are intended for surface sampling for subsequent microbiological analysis.

The kit is a single use product and is **sterilized by radiation**.

The swab is composed of a polystyrene support with a breakpoint (only reference **200398**) and a viscose tip. The tube incorporates a pressure or screwed cap.

Presented in unit packaging in peel-pack format.

Available the mismo kit with medium peptona, consult with the sales department.

See Whirl-Pak bags for surface areas on page 57.

Recommended for food, cosmetic, environmental, veterinary and pharmacy industry, among others.

Petri dish baskets

These stainless steel baskets are suitable for dishes of diameter up to 10 cm.

Two models available to hold 16 or 32 Petri dishes.

We can supply customer-designed models.

code	description	L x W x H mm (height without handle)	case quantity	case weight	case volume
H-600	1 section, holds up to 16 dishes	105x110x250	1	0.13	0.005
H-601	2 sections, holds up to 32 dishes	105x215x250	1	0.31	0.009

Height with handle: 360 mm.

Jar for anaerobiosis incubation

Anaerobic Petri dish incubation system.

Jar of methacrylate designed for use with any anaerobiosis that generate special atmospheres.

Up to 14 90mm diameter petri plates.

Metal cap fixed by locking pressure system.

Stainless steel rack.

Viton® O-ring.

Compatible with all the usual reagents in microbiology.

Available cover in blue or red.

code	dimensions* (mm)	cover colour	case quantity	case weight	case volume

Contact plates

Aseptic production. Used in the pharmaceutical industry, hospital environments for determining bacterial contamination of surfaces such as the skin, operating tables, refrigerated gondolas, and work surfaces.

They are manufactured in transparent polystyrene.

The moulded grid at the bottom makes it possible to identify the detected contamination per cm² and it facilitates the counting of colonies.

Stable stacking: The shape of the lid makes stacking perfectly stable during transport and incubation, and saves space on work surfaces.

Dimensions of the dish: 65,7 mm x 14,7 mm height.

code	description	sterile	case quantity	case weight	case volume	cases per pallet
200208	Rodac contact plate	no	25 x 20	5.00	0.031	70

Moulded contact plate rack

Useful for safe transport and incubation of Rodac contact plates and helpful to streamline bench top sample processing. Each rack holds up to 60 contact plates with lids (minimum diameter: 65 mm, maximum diameter: 72 mm) configured in six columns of ten plates. Up to 4 racks can be stacked together, and all interlocked to prevent accidental knock over. Access slots under each stack of contact plates allows a stack of plates to be safely removed from the rack using a secure ring that places a finger under the bottom plate and thumb on top of the lid of the top plate. A large centre divider provides space for labelling and incorporates a handle. All parts are moulded with white polypropylene and are steam **autoclavable at 121 °C**. Racks are supplied individually bagged, flat, and can be easily assembled (instructions included).

code	dimensions* (mm)	case quantity	case weight	case volume

*Lenght x width x height.

Moulded 90 or 100 mm Petri dish rack

Useful for safe transport and incubation of 90 or 100 mm Petri dishes and helpful to streamline bench top sample processing.

Each rack holds up to forty-two Petri dishes with lids, configured in interlocked columns of seven plates. Up to 4 racks can be stacked together, and all interlock to prevent accidental knock over. Access slots under the bottom Petri dishes allows a stack of dishes to be safely removed from the rack using a secure ring that places a finger under the bottom dish and thumb on top of the lid of the top dish.

All parts are moulded with white polypropylene and are steam **autoclavable at 121 °C**. Racks are supplied individually bagged, flat, and can be easily assembled (instructions included).

Stackable Petri dish incubation tray

This polypropylene tray increases overall capacity of the incubator. Designed to hold five 100 mm diameter or fifteen 60 mm diameter Petri dishes, it's provided with two large label areas for critical sample identification by marker or label.

With 16 vents.

Not autoclavable.

code	dimensions (mm)	case quantity	case weight	case volume
H-615	251 x 35 x 237	3	0.82	0.011

Microtitre plates, sterile

Made of high transparency polystyrene.

Standard 96-well plates.

Three models available depending on the bottom of the well.

- **Flat bottom plates ("L" shaped plate)** are more suitable for optical reading (for example, by means of a spectrophotometer). They are also suitable for cell culture in suspension, as well as for those ELISA applications in which the treatment of the surface is not required to improve the adhesion between the plate and the antigen or antibody.
- The **tapered bottom plates ("V" shaped plate)** are very practical when you need to recover the entire sample or to separate components by centrifugation. They can be used for complementing the fixation technique
- **Round bottom plates ("U" shaped plate)** are also used to recover the entire sample or to separate components by centrifugation.

Other applications:

- Dilution
- Preparation of serial samples
- Protein precipitation
- Haemagglutination

The cover, in transparent polystyrene, is supplied separately (codes **900015** or **900015.1**).

These plates can also be covered using the transparent sealing film or the plate sealing mat (see page 68).

Both sterile and non-sterile models are supplied in an individual bag.

Dimensions of the plate: 127.7 x 85.8 mm.

Cell spreader. Sterile

Designed for surface spreading. Made of white polystyrene. **Sterilized by ethylene oxide. Total length:** 149 mm, **base length:** 40 mm. Base length allows spreading liquid samples over any type of Petri dish and avoids contact with the dish walls. The curved Spreader extremity and rounded corners avoid damaging media surface while spreading. The tip bent and rounded edges minimize the possibility of breakage of the solid medium during extension. It allows their use in places where sterilization before use is not possible (for instance when samples are collected far from the lab). Available in peel-pack containing 1 or 5 units, marked with code, expiry date, lot and sterilization method.

code	presentation	case quantity	case weight	case volume
200500.1	5 units peel-pack	1,000	3.32	0.018
200510.1	1 unit peel-pack	1,000	3.6	0.079

Nichrome wire loops

Nichrome wire loops for microbiology.

Comparing them to the traditional loops made of platinum and rhodium, the nickel and chrome alloy results much more competitive in terms of durability and price. Moreover, it offers a totally smooth surface, and rapid cooling after heat sterilisation.

Non-calibrated loops (mod. A):

Non-calibrated nichrome loops, without holder, saving money and storage space. Supplied in groups of 25 units, in one tube, specifying code, description, and lot.

Calibrated loops (mod. B):

Calibrated nichrome loops. Supplied individually in a capped tube, labeled with the code, description and lot.

Non-calibrated loops with holder (mod. C):

Non-calibrated loop made of nichrome alloy.

Light aluminum holder golden colour, partially protected by a transparent, insulating, non-skid plastic.

Streaking needles

Sterile polypropylene planting needle. Flexible, red. **Product sterilized by radiation.**

code	description	sterile	case quantity	case weight	case volume
668811	10 units peel-pack	STERILE R	6 x 1,000	7.78	0.030

Sterile calibrated loops

Inoculation loops used for collection and inoculation by streaking or puncturing method. Flexible loops made of HIPS material. Hexagonal shaft with stripes. They are ideal for inoculation in gel surface by streaking.

Sterilized by radiation.

Two sizes available: 1 µl and 10 µl.

Not recommended for colony counting. Sterile inoculating loops.

Batch and expiry date printed on the bag.

The packaging offers a double closure with a zipper system that closes the coat once opened.

Innoculation loops 1 µl:

Internal diameter : 0.75 ± 0.08 mm

Length : 196 mm

Innoculation loops 10 µl:

Internal diameter : 4.1 ± 0.08 mm

Length : 200 mm

302734	10	20 ud. zip lock	blue	10 x 1,000	12.8	0.070

Sterile calibrated loops

Loops made of polystyrene, high robustness and adequate flexibility for comfortable and efficient use. **Sterilized by radiation.**
 Double use loops: at one of the ends there is a loop for streaking in Petri dishes, using both qualitative and quantitative techniques. At the other end there is a fine tip specially designed for counting colonies. Available in 2 volumes: 1 and 10 µl. The green and blue colors are used to easily differentiate the 2 volumes in the laboratory. They offer great ergonomics and gripping thanks to its hexagonal design of each section which provide ease of orientation while using it. There are 3 presentations: individual pack, 10 and 20 units. All of them are supplied in a plastic packaging with easy opening. The loops are calibrated. **Deltalab** certifies the control of the dimensional accuracy of the diameter of the loop by means of specific gauge (**Calibration certificate available under request**).

Internal diameter 1 µl handle: 1.42 ± 0.05 mm
 Internal diameter 10 µl handle: 3.98 ± 0.05 mm

12 ml screw cap tubes, round bottom

Made of **autoclavable (121 °C)** transparent polypropylene or polystyrene. Green cap made of high density polyethylene.

Dimensions: 15 x 102 mm. The external skirt allows the tubes to remain **free-standing**. Supplied screwed. Recommended volume: 12 ml. The sterile model (ethylene oxide) is supplied individually in flow-pack bag, with indication of batch, expiration date, etc.

According to the guidelines for sterile products. Resistance to centrifugation: **PS: 7,500 xg. PP: 15,000 xg.**

Attention: For autoclaving, the cap should be loose on the thread and not tightly fitted.

Sterile culture tubes in polystyrene

Tubes supplied with either a two position ribbed polyethylene cap, which can be left loose for aerobic work or sealed for anaerobic cultures.

They are biologically inert, exempt from mold release agents, and withstand up to **1,400 xg** and at a temperature between **-190°C to 120°C**.

Packaged in self-standing resealable zip-lock bags of 125 units.

Graduation up to 4 ml and up to 14 ml. 1 ml graduation.

Loose position for aerobic work

PosSealed position for anaerobic cultures

15 ml and 50 ml centrifugal tubes

Made of polypropylene, suitable for both clinical and research applications.

Latex and heavy metal free material. **Only non-sterile models are free of DNase, RNase, ATP, human DNA and endotoxins.**

High transparency of the material for a clear visualization during experiments specially for molecular biology.

Tube and cap designed with the system of flat threads for a complete leakproof.

Highly smooth hydrophobic surface for minimum disturbance during centrifugation.

Silk-screen black graduation in the tube and large white frosted portion for easy writing.

Autoclavable at 121 °C.

Centrifugation resistance: **14.000 xg**, except code **429931: 7.500 xg** and codes **429950, 429951: 3.500 xg**

It is recommended to use adapters to centrifuge and avoid malformations.

Available models: 15 ml non-skirted and 50 ml skirted and non-skirted.

code	description	presentation	sterile	case weight	case volume	cases pallet

15 ml conical tubes

Tubes made of transparent polypropylene, conical bottom, suitable for centrifugation tests in immunology, microbiology, etc. Continuous thread, external moulded graduations in 0,5 ml increments.

Wrinkled area (55 x 10 mm).

Blue cap in polyethylene with hermetic closure thanks to its internal elastic obturation.

Code **429910** is autoclavable (**121°C**) with the cap not being closed, just placed on the thread.

Autoclave not recommended for the codes **429920** and **429946**, as they have been **sterilized by radiation**.

Code **429920** is supplied sterile (100 units bags).

The bag specifies IVD, lot number, expiration date, etc.

Code **429946** is supplied sterile **in individual bags**. Resistance to centrifugation: **7,000 xg** (non sterile model) and **5,000 xg** (sterile models).

It is recommended to use adapters to centrifuge and avoid malformations.

Length (with cap): 120 mm. External mouth diameter: 17 mm. External cap diameter: 20,9 mm.

POLYPROPYLENE RACKS
Pag. 225

code	sterile	autoclavable	case quantity	case weight	case volume	cases pallet
429910	no	✓	500	3.94	0.030	54

50 ml conical tube

Tubes made of transparent polypropylene, conical bottom, suitable for centrifugation tests in immunology, microbiology, etc.

Perfect to analyse Koch bacillus. Continuous thread, external moulded graduations in 5 ml increments.

Blue cap in high density polyethylene with hermetical closure thanks to its internal elastic obturation.

Skirted and non skirted versions, **sterilized by radiation** and non sterilized versions. Sterile codes are either supplied in individual bags (codes **429926**, **429927**), in bags of 100 units (codes **429926.10**, **429927.10**), or in bags of 25 units (codes **429926.25**, **429927.25**) and resist up to **7,000 xg**.

Autoclave not recommended as they have been ionised.

Non sterile codes withstand up to **12,000 xg** and are autoclavable (**121 °C**) with the cap loose on the thread and not tightly fitted.

Every version is supplied capped, excepting code **429900SP**, which is supplied uncapped, with the cap in a separated bag.

You need to use the proper adapters to the tube of the code **429926** during the centrifugation to avoid malformations.

Pipetting bulb

This one-handed design is the simplest safety pipette filler to use available. Manufactured in natural orange rubber. Approx. drawn capacity: 25 ml. Single hand use, only two operating points. Evacuate via the automatic valve. Standard model, accommodates all pipettes. The inside bulb can be cleaned by removing the patented valve and rinsing out.

1. Evacuate the air by pressing the bulb, as the drawing indicates
2. Intake by pressing on point B (↑)
3. Drain the liquid by pressing on point A (↓)
4. Blow out the pipette by pressing as the drawing indicates (point C).

code	description	bag quantity	bag weight	bag volume
19200	pipetting bulb	1	0.05	0.0004

Pipetting bulb

Made of rubber.
Used to avoid mouth pipetting and contamination risk.
Can be opened, cleaned and **autoclaved**.
Ideal for Wintrobe and Westergren pipettes.

code	description	bag quantity	bag weight	bag volume
19201	red pipetting bulb	1	0.04	0.0002

Pipette pumps

Several models for various pipette volumes.
Designed for fast and efficient pipetting with simple, one handed operation.
Pipettes fit smoothly into collar.
Rotate the knurled thumb wheel on the side for precision filling or dispensing, and press the fast release lever for quick emptying.

Easy to use and easily disassembled for cleaning.
Sizes are colour coded. Pipette pumps resist acids and alkalies.

Presentation in individual box.

code	description	colour	bag quantity	bag weight	bag volume
W-100	up to 2 ml	blue	1	0.06	0.0002
W-110	up to 10 ml	green	1	0.06	0.0002
W-120	up to 25 ml	red	1	0.06	0.0002

Sterile serological pipettes

Made of glass polystyrene. Single use only.

Serological pipettes have an accuracy of +/- 2% at full scale.

Sterilized by radiation.

Manufactured in one, two or three pieces depending on the volume.

They guarantee maximum precision without liquid retention at the welding level and offer a total dispensing. Pyrogenic, non-cytotoxic and non-hemolytic.

Volumes from 1 ml to 50 ml, identified with a polyolefin (does not contain synthetic fibers) white cotton and screen printed in colour according to volume.

The peel-pack of the models presented in this way is fiber-free and easy to open. Black graduations, bright and unalterable. Negative scale and double inverted scale (ascending and descending graduations).

DNase and RNase free.

Manufactured in a room with controlled environment, class 100,000.

BSE / TSE free.

This product does not contain latex.

Find trays, rotary stands and other products for pipettes in chapter **Safety and General Labware**

See our plastic Pasteur pipettes in chapter **Liquid Handling**

Please find racks for these pipettes in chapter **Sample Storage**

Three models of tips available:

A = TAPE END,

B = WIDE TIP,

C = OPEN TIP

(recommended for viscose samples).

New filtration range

Deltalab presents a new range of products for microfiltration, consisting of polycarbonate, cellulose nitrate and polyethersulfone membrane filters, as well as hydrophobic and hydrophilic cellulose acetate, nylon and PTFE syringe filters.

Membrane microfiltration is a technical process that allows solid particles to be retained from a fluid (liquid or gas) by passing through a microporous filter medium. Membrane filters, being surface filters with a very precise microporous structure, are used to retain and separate particles or microorganisms from a sample for analysis.

Particles larger than the absolute porosity of the filter are retained on its surface, while smaller particles pass through the filter unless other interactions retain them inside.

Microfiltration covers a smaller particle retention range than that of filtration with filter papers (depth filters).

In addition, membrane filters are used in microbiological quality control procedures in various industries, such as food, beverage, pharmaceutical, cosmetics, water analysis, among others.

The DELTAGO range also includes syringe filters, designed to provide fast and efficient filtration of organic and aqueous solutions.

Polycarbonate membranes

Polycarbonate membranes are manufactured from a high-quality polycarbonate film using track-etched technology. The resulting membrane is a thin, translucent, microporous polycarbonate film with a smooth, flat surface.

Its pore structure is uniform and very precise with a fairly homogeneous pore size distribution.

The surface makes them ideal for the identification of microorganisms using microscopy or binocular lenses.

It provides perfect sample control, capturing 100% of microorganisms larger than the pore size of the membrane.

Maximum working temperature: 140 °C.

Applications:

- Particle analysis.
- Epifluorescence microscopy.
- Fluid clarification.
- Cytology.
- Biological assays, cell biology and cell cultures.
- Removal of red blood cells from plasma.
- Water microbiology (Legionella analysis in drinking water according to ISO 11731).
- Environmental analysis (detection of AOX in water).

code	thickness	diameter	sterile	case quantity
100-2001	0.2 µm	47 mm	no	100

Gridded cellulose nitrate filters

Gridded membranes made of mixed cellulose esters, sterile and individually packaged, for colony counting in routine microbiological quality control.

They are ready-to-use membranes and save preparation time.

The grid size is 3.1 x 3.1 mm.

Available in various colours to ensure the best contrast with the colonies.

Maximum working temperature: 130°C. Autoclavable and with high flow rate.

Applications:

- Clarification and sterilisation of aqueous solutions
- Microbiological analysis and colony counting
- Particle size analysis
- Pre-filtration and clarification of samples before further analysis
- Removal of particles in suspensions to determine the degree of impurity.

PES membrane filters

This membrane is constructed from a temperature-resistant, acid- and base-resistant polyethersulfone polymer.

These membrane filters are recommended for biological applications in aqueous solutions and protein filtration.

They are designed to retain particles during general filtration. Their low protein adsorption and low drug binding characteristics make them ideal for use in life science applications.

Excellent flow rate, even with viscous liquids.

Sterilization: **autoclave at 121 °C**, with Y radiation or ethylene oxide

Applications:

- Filtration and sterilization of proteins and enzymes.
- Sterilization of biological fluids, serum and tissue culture media.
- Biological and clinical analysis.
- Filtration and sterilization of pharmaceutical solutions.
- Determination of the presence of Legionella for the concentration or elution method according to ISO 11731:2017.

code	thickness	diameter	sterile	case quantity
100-3001	0.2 µm	47 mm	STERILE	100
100-3002	0.2 µm	47 mm	STERILE	1,000

Cellulose acetate syringe filters

Cellulose acetate syringe filters are manufactured for fast and efficient filtration of up to 100ml of liquid.

These ready-to-use units offer high flow rates at low inlet pressures.

Available in 5 pore sizes: hydrophilic membrane, low protein adsorption, high flow rate, high strength and stability, up to 100ml sample volume.

Applications:

- Preparation of biological fluid samples.
- Filtration of proteins and enzymes.
- Filtration of cell cultures.
- Clarification of aqueous and alcoholic solutions.

code	thickness	diameter	sterile	case quantity

100-4003	0.45 µm	25 mm	STERILE	100

Nylon syringe filters

SNY syringe filters offer a polyamide 66 (Nylon) membrane in a polypropylene housing.

Due to their high chemical compatibility and physical strength, these syringe filters are recommended for filtering HPLC samples.

Hydrophilic membrane, wide range of chemical compatibility, autoclavable.

Applications:

- Filtration and clarification of samples.
- Sterilization of aqueous and dilute organic solvents.
- Preparation of HPLC samples.

code	thickness	diameter	sterile	case quantity
100-5001	0,20 µm	25 mm	no	100
100-5002	0,45 µm	25 mm	no	100

Hydrophobic PTFE & Hydrophilic PTFE/L syringe filters

Hydrophobic PTFE/H syringe filters are indicated for cleaning small volume samples for HPLC or GC analysis, where maximum chemical resistance is required. Hydrophobic membrane, high chemical resistance to most solvents and acids, autoclavable.

Hydrophilic PTFE/L syringe filters are suitable for aqueous and aggressive organic solvent-based solutions and especially ideal for HPLC samples. The modified membrane exhibits broad chemical resistance and unsurpassed temperature stability to address aggressive sample cases or high temperature situations.

Bottle for collecting water and microbiological analysis

The container contains 24 mg/l of sodium thiosulfate, which neutralizes the bactericidal effect of chlorine during sample transport.

The container is graduated up to 100 ml and includes molded graduations and a label with space to note the sample identification.

This container is made of high transparency polypropylene and has a red, high-density polyethylene screw cap with a discontinuous thread and ribbed for easy handling. The closure is airtight and highly secure thanks to the internal shutter incorporated in the cap.

The product is developed following the ISO 5667-3:2012 Water quality: sampling standard and complies with the European Directive 2020/2184/CE and subsequent amendments.

Its storage does not require special environmental conditions, although it is preferable to avoid sudden temperature changes.

This container allows the user to comply with the European standard UNE10030/2023 for Legionella control.

120 ml bottle with thiosulfate for water analysis

The bottle contains 24 mg/l of sodium thiosulfate, which neutralises the bactericidal effect of chlorine during sample transport.

The container is graduated up to 100 ml and includes a moulded graduation and a label with space to write down the sample identification.

This bottle is made of highly transparent polypropylene and has a cap with a discontinuous, red, ribbed high-density polyethylene thread for easy handling. The closure is airtight and highly secure thanks to the internal shutter incorporated in the cap.

Product developed in accordance with ISO 5667-3:2012 Water quality: sampling, and complies with European Directive 2020/2184/EC and subsequent amendments.

Its storage does not require special environmental conditions, although it is preferable to avoid sudden changes in temperature.

code	description	sterile	capacity ml	case quantity	case weight	case volume	cases pallet
409766	bottle with thiosulfate	STERILE R	120	350	6.30	0.140	16

We can supply bottles with different concentrations of thiosulfate according to the regulations applied in each country. For bottles of other volumes, please contact our sales department.

Dimensions:
 Outer diameter (A): 48.3 mm
 Outer diameter with plug (B): 62.1 mm
 Total length with plug (C): 74.3 mm

Sterile jars for water sampling

Transparent squared jars made of PET.

Wide mouth and grips at two sides, easing the sample collection.

Red cap made of polypropylene with internal liner made of polyan with a label that performs as tamper evident.

Sterilized by radiation. Each bottle is labelled specifying description, code, lot, and expiry date.

Internal mouth diameter: 55 mm

Jar weight (gr):

500 ml jar: 44 g - 1,000 ml jar: 65 g

Available with or without sodium thiosulfate.

With liquid sodium thiosulfate (24 mg/l): Ideal to analyze water meant for human consumption, swimming pools, and any other water where chlorine may modify the composition of the sample while being transported.

Empty, without thiosulfate: Ideal to sample unchlorinated water for microbiological analysis, as well as for other sampling requiring sterile bottles.

Laboratory and industrial packaging

Sterile bottles for water sampling

Rectangular body and cap made of polyethylene. The minor sides are gripped for a better handling. The larger sides are flat for labelling. Tamper evident red cap with an internal joint. Hermetical closure.

Sterilized by radiation.

Each bottle is labelled specifying description, code, lot, and expiry date.

Dimensions:

500 ml bottle: 83 x 65 x 135 mm - 1,000 ml bottle: 83 x 65 x 235 mm.

Internal mouth diameter: 28 mm.

Unitary weight (empty bottle):

500 ml bottle: 40 g - 1,000 ml bottle: 61 g.

Available with or without sodium thiosulfate.

Bottles with liquid sodium thiosulfate (24 mg/l): Ideal to analyse water meant for human consumption, swimming pools, and any other water where chlorine may modify the composition of the sample while being transported.

Sterile bottles: Ideal to sample unchlorinated water for microbiological analysis, as well as for other sampling requiring sterile bottles.

We can supply any other concentration according to each country's standards.

For other volume bottles, please contact our sales department.

Optionally presented in individual bags if requested.

Whirl-Pak® bags with sodium thiosulfate

Bags used for collecting samples of drinking water and treated waters of swimming pools, sewage, etc. These bags tend to stand on their own, they are pre-sterilized, they are unbreakable, compact, with matte band for identification and closure. It is totally waterproof. They contain 10mg sodium thiosulfate tablets inside for each 100ml of water.

code	description	capacity ml	dimen. cm	thickness microns	case quantity	case weight	case volume

Long-handled dippers

Polypropylene cup and polyethylene handle. For convenient sampling from tanks, vats, streams, ponds, lakes, etc. These dippers are light, easy to use and portable. The polypropylene cups have threaded fittings that screw onto the handle. Two pouring spouts on the 500 ml dipper make it useful for left or right handed people to pour from either side.

The end of the handle has a hook for hanging. **Autoclavable container (up to 121°C).**

Please ask the sales department for other lengths.

Sterile homogeniser lateral filter bag

Filter bag suitable for PCR and small volumes, it can be used with very short pipettes.

The unique and patented Pull-Up system allows to pinch the bag and pull up the filtered liquid for easy pipetting.

Nonwoven side filter having a porosity of 50 microns, rigid and transparent. The filtration is performed during homogenization, it is not necessary to wait for the sedimentation of particles.

Compatible with any lab blender.

Sterile by radiation.

code	packaging	case quantity	case weight	case volume
983045	homogeniser lateral filter bag 400 ml	10x25	2.72	0.010

Sterile homogeniser full size filter bag

Bag made of transparent polyethylene (PE) divided in two parts by a filter: **15005**: the filter is integrated into the bag.

122000: joined to the bag by a point in the upper part of the sheet.

The sample is inserted into one of the compartments and, after being homogenised and filtered, the solid particles remain in the initial compartment, while the liquid ones pass to the other compartment and can be extracted with a pipette without any risk of obstruction.

Sterile Whirl-Pak® blender bags with and without filter

Bags made of a low density polyethylene blend, resulting in an **extra-resistant and transparent bag**. Leakproof closure with several metallic rounded sticks.

Codes **200373**, **200374** and **200376** feature a **filter layer** of finely **perforated polyethylene**, to separate the liquid and solids. This allows the **easy pipetting of the sample**. There are 6.45 holes per cm², each one measuring 330 microns diameter. Bags with a **one-piece seam**, avoiding the possible risks of the loss of the corners bags. They feature a write-on strip (excluding codes **200342** y **200343**).

Ethylene Oxide sterilized. Made with materials suitable for food or food industry.

Sterile bags for STOMACHER® blenders

Made of polyethylene. Thickness: gauge 300. Ideal for mixing and blending bacterial samples or when collecting toxic substances from food, fabrics, etc.

Irradiation sterilized. Supplied in bags of 25 units.

Code **15006** is a stainless steel rack for 14 bags. Side handles incorporated.

To close bags. They may be used with the rack **15006**.

Made of a blue tubular piece (230 mm) and a white clip (197 mm) which tightens the bag around the blue tube.

Code **983047** is a clip to close and adjust bags onto the rack.

Also available non sterile versions. Please ask for the minimum order quantity and delivery time. Add an "S" at the end of the code.

Whirl-Pak® surface sampling bags

New Whirl-Pak bags with spoon, hydrated sponge with sample collection medium. The buffered medium of the 200381 model contains monopotassium phosphate, sodium thiosulfate and aryl sulphonate complex.

Code 200381

Cellulose sponge, hydrated with 10 ml of neutralizing buffer. The buffer will neutralize surface sanitizers, including quaternary ammonium compounds, phenolics, iodine preps, chlorine preps, mercurials, formaldehyde, and glutaraldehyde. Diluent has a 24-month shelf life from the date of manufacture. Neutralizing buffer contains monopotassium phosphate, sodium thiosulfate, and aryl sulfonate complex.

Code 200382

532 ml write-on bag contains a sterile, disposable polystyrene plastic spoon of approximately 1 teaspoon capacity.

Meat sampling kit

Designed according to the international standard **ISO 17604**, which is taken as reference on European Directives and Rules about microbiology of food and animal feeding stuff – carcass sampling for microbiological analysis.

Kit 200393.VSP consists of:

- Bottle with 25 ml of sterile buffered peptone water
- Abrasive sponge presented in a sterile bag

The template is sold separately (code 200393P).

Expiry date: 16 months.

02. CELL CULTURE. MOLECULAR BIOLOGY

Cell and tissue culture multiwell plates

Ideal for cell growth and cell yields on multiple, comparative and other analysis. Single position lid reduces the risks of cross-contamination and handling mistakes. Wells are labelled with alphanumeric codes for easy identification. Suitable for all common instruments and automation.

Surface treated.

Lid included. Individually packaged.

Cell and tissue culture flasks

Cell and tissue culture flasks are perfect for cell growth with optimal performance in cases of small to medium initial sample volumes. Available as surface treated and untreated surfaces. Flask surface is flat and free of streaks to maximize the usable growth area. The innovative angled neck design provides good access for pipettes and scrapers. Both sides of the flask have engraved graduations, and **all references can be vented or non-vented, depending on how the cap is closed.** There are models with and without a filter in the cap.

Strict integrity tested. Packaged in packs of 10 units.

Sterilized by radiation. Non-pyrogenic. DNase/RNase-free.

Cell strainer

Cell strainers are manufactured from a strong nylon mesh with evenly spaced mesh pores and gamma resistant. These cell strainers are sterile, rapid, easy-to-use devices for isolating primary cells to consistently obtain a uniform single-cell suspension from tissues. Protect your valuable flow cytometry and cell sorting instrumentation by reliably removing clumps and debris from cell suspensions and clinical samples prior to analysis. Improved uniformity of single cell suspensions. Made of a strong nylon mesh with evenly spaced mesh pores. The extended lip on the strainer enables aseptic handling with forceps

Ready-to-use. **Individually packaged.**

Sterilized by radiation. Non-pyrogenic. DNase/RNase-free.

Sterile culture tubes in polystyrene

Tubes supplied with either a two position ribbed polyethylene cap, which can be left loose for aerobic work or sealed for anaerobic cultures. They are biologically inert, exempt from mold release agents, and withstand up to **1,400 xg** and at a temperature between **-190°C to 120°C**. Packaged in self-standing resealable zip-lock bags of 125 units.

Loose position for aerobic work

PosSealed position for anaerobic cultures

code	dimensions mm	volume	case quantity	case weight	case volume

300808	17 x 100	14ml	8 x 125	7.14	0.060

Sterile serological pipettes

Made of glass polystyrene. Single use only. Serological pipettes have an accuracy of +/- 2% at full scale. **Sterilized by radiation**. Manufactured in one, two or three pieces depending on the volume. **DNase and RNase free. BSE / TSE free**. Pyrogenic, non-cytotoxic and non-hemolytic. See more technical information on page 45.

Three models of tips available:
A = TAPE END
B = WIDE TIP
C = OPEN TIP (recommended for viscose samples).

Screw thread microtubes

Made of **autoclavable** polypropylene, they can be used at extreme temperatures from **-190 °C to +121 °C**. Two versions available: in transparent polypropylene, or opaque brown (**UV resistant**, designed to be used with light sensitive samples). **Certified RNase, DNase and pyrogen free**. Tubes and caps can be centrifuged at **17,000 xg**. Caps are supplied separately, see below.

Dimensions: 11 x 44 mm.

mod.	code	volume ml	skirt	case quantity	case weight	case volume

Screw cap microtubes, with cap. Sterile

Tubes and caps in medical grade, transparent polypropylene.

The cap embodies a non-reactive gas-propylene o-ring.

Suitable for **autoclave, liquid nitrogen (gaz) and boiling processes**.

Perfect for long term storage. Withstand temperatures from **-190 °C**.

DNase, RNase, DNA, and PCR inhibitors free.

Centrifugation Resistance: **20,000 xg**.

Graduated models feature a frosted area for writing.

Microtubes are supplied capped, in bags of 50 units.

Dimensions: 44.45 x 12.95 mm

Screw thread tamper evident microtubes

Microtubes and caps are made of autoclavable ultra clear polypropylene. Ribbed cap with internal silicone O-ring for a positive **leakproof seal**. Super fast ¼ turn thread design. **Tamper evident** seal that proves if microtube has been opened. They can be used at extreme temperatures from **-196 °C to 121 °C**.

Rnase, Dnase and Pyrogen free.

Resistance to centrifugation: **17,000 xg**.

Microtube dimensions: 11 x 44 mm.

Cap dimensions (with tamper-evident ring): 15 x 9 mm

1. Screw cap until locking ring clicks over serrated tube neck.
2. Contents are now protected until cap is removed and tamper-evident ring is detached.

mod.	code	volume ml	case quantity	case weight	case volume

2	409110.2T	1.5	1.000	2.06	0.013

Human DNase, RNase and DNA free certified swabs, sterile

Human DNA free Certified. The swab is supplied in a polypropylene tube, which protects the sample up to the laboratory prior to its analysis.

The stick of the swab is made of polystyrene while the head is produced with viscose or polyester according to the code.

The tube is labeled indicating code, description, lot, expiry date and providing an identifying area to note down collection details (site, date, etc.).

Moreover, the label seals the tube with the cap of the swab, acting like a tamper evident system.

Sterilized by ethylene oxyde.

code	description	selling unit	case quantity	case weight	case volume

0.2 ml Real Time PCR tubes

Tubes made of polypropylene, featuring attached hinged caps.
Flat caps are easily pierceable and offer optical quality, thus allowing their application in **Real Time PCR**.
Available in strips of 8 tubes (see code **4095.1NP** in the following page).
Certified **RNAse, DNase and PCR inhibitors free**.

code	description	case quantity	case weight	case volume
4094.5N	PCR 0.2 ml QPCR tube	1,000	0.25	0.003

0.2 ml PCR tubes

Tubes made of polypropylene, featuring attached hinged caps.
Caps are flat and easily pierceable.
See strips of these tubes on the following page (codes **4094.3N** and **4094.4N**).
Certified **RNAse, DNase and PCR inhibitors free**.

code	colour	case quantity	case weight	case volume
4094.1N	natural	1,000	0.24	0.003
4094.1A	blue	1,000	0.24	0.003
4094.1R	red	1,000	0.24	0.003
4094.1AM	yellow	1,000	0.24	0.003

Ask for minimum quantity and delivery time for other colours.

0.2 ml PCR tubes

Made of polypropylene.
Tubes with attached domed cap.
Certified **RNAse, DNase and PCR inhibitors free**.

code	description	colour	case quantity	case weight	case volume
4095.9N	individual tube with cap	natural	1,000	0.25	0.003

0.2 ml PCR tubes in strips

Made of natural colour polypropylene. Different models available:

- Strip of 8 or 12 tubes with its corresponding strip of 8 or 12 domed caps.
- Strip of 8 tubes with its attached hinged strip of domed caps.
- Strip of 8 tubes with its attached hinged strip of flat caps, suitable for **Real Time PCR**.
- Strip of 8 flat caps, suitable for **Real Time PCR**.

Cap and tube strips allow easy handling and inventory of tubes and caps. Cap strips prevent cross-contamination from tube to tube.

Code **4095.7N** is also suitable for plates. **Certified RNase, DNase, pyrogen and PCR inhibitors free.**

code	description	case quantity	case weight	case volume
1	4095.2N 8 tube strip + 8 domed cap strip	125 strips	0.30	0.0036

6	4095.4N 12 tube strip attached to 12 domed cap strips	80 strips	0.20	0.0028

Ask for another colours.

0.2 ml PCR tubes in strips

Tubes made of polypropylene, featuring attached hinged caps.

Suitable for **Real Time PCR**.

See individual tubes on page 67 (**4094.1N**). Caps are flat and easily pierceable. In bags of 10 strips.

Available in standard height (code **4094.3N**) and low profile (code **4094.4N**) that minimizes the effects of condensation and it allows working with small samples even less than 20 µl. **Certified RNase, DNase, pyrogen and PCR inhibitors free.**

code	description	case quantity	case weight	case volume
1	4094.3N strip of 8 tubes and 8 attached caps	120 strips	0.27	0.0036
2	4094.4N strip of 8 tubes and 8 attached caps low profile	120 strips	0.22	0.0028

0.2 ml PCR tubes in strips

Made of polypropylene.

The strip includes 8 integral 0.2 ml tubes with ultra thin sidewalls and bottoms with individually attached caps. Available with either **flat (needle pierceable)** or **dome-topped individually** attached hinged caps.

Every cap embodies a shield in order to prevent contamination when being opened.

While easily opened and closed with one hand, their positive sealing will fully protect the contents from evaporation during the whole thermal cycle. These strips can be cut to any length while each tube has its own attached cap.

Certified RNase, DNase and pyrogen free.

code	cap	case quantity	case weight	case volume
1	4096.2N flat	125 strips	0.40	0.055
2	4096.3N domed	125 strips	0.43	0.003

Real Time PCR

Polimerase Chain Reaction is one of the most common techniques in every lab where Molecular Biology is being used. Its applications comprise **Diagnostics, Genetic and Prenatal testing, Tissue Typing, Forensics, Pharmacological evaluation**, among others.

One of the **most useful PCR techniques** is the **Real Time PCR**, also known as **Quantitative PCR (QPCR)**. Its main advantage in front of standard PCR is that it saves time as the quantification is being held during DNA amplification. While standard PCR needs a quantifying process after DNA amplification, **QPCR gives results in real time**.

PCR standard consumables are mainly made of transparent polypropylene. After some years of experience, laboratory technicians have found that **crosstalking among transparent wells may affect the real time quantification**. **Opaque white wells and tubes** have proved to avoid this well-to-well crosstalking, thus **ensuring an exact and reliable quantification**.

Opac wells also allows luminosity absorption.

The following pages include the newest innovations in this brand new area; like **bi-mould technologies**, which allow the manufacture of an opaque tube attached to an optically clear cap.

White well technology is available in both strips of tubes or also 96 well plates.

CELL CULTURE. MOLECULAR BIOLOGY

0.2 ml, Real Time PCR tubes in strips

Tubes made of polypropylene.

Strip of 8 tubes, each one featuring an attached flat cap.

Strips are manufactured by biomaterial molding, so the tubes are made of opaque white PP, while caps are compounded of transparent, optically clear PP. Opaque white tubes perform the highest performance in **Real Time PCR**, as they avoid crosstalking between wells.

Specially conceived for **Real Time PCR**.

Caps are easily pierceable.

In bags of 10 strips.

Certified RNase, DNase and PCR inhibitors free.

Autoclavable at 121°C.

code	description	case quantity	case weight	case volume
4094.5BP	strip of 8 white 0.2 ml QPCR tubes and 8 attached caps	120	0.27	0.004

0.2 ml, Real Time PCR tubes in strips

Tubes made of polypropylene.

Strip of 8 tubes, featuring an attached strip of 8 flat caps. Strips are manufactured by biomaterial molding, so the tubes are made of opaque white PP, while caps are compounded of transparent, optically clear PP. Opaque white tubes perform the highest performance in **Real Time PCR**, as they avoid crosstalking between wells. Specially conceived for **Real Time PCR**.

Caps are easily pierceable.

Certified RNase, DNase, pyrogen and PCR inhibitors free.

Autoclavable at 121°C.

code	description	case quantity	case weight	case volume
4095.1BP	strip of 8 white 0.2 ml QPCR tubes and 8 caps	125	0.23	0.004

Graduated 0.5 ml PCR tubes

Made of **autoclavable** polypropylene.
Attached hinged caps are flat and easily pierceable.
Tubes are easily opened and closed with one hand.
Tubes have moulded-in graduations in 0.1 ml increments from 0.1 up to 0.6 ml, and a frosted panel on their side for writing or labelling.
Certified RNase, DNase and pyrogen free.

code	colour	case quantity	case weight	case volume

4094.2R	red	1,000	0.38	0.005

Graduated 0.5 ml PCR tubes

Same features as the above tubes, but with a domed cap.

code	colour	case quantity	case weight	case volume
4095.5N	natural	1,000	0.46	0.005

384 wells plate skirted

Made of transparent polypropylene. 384 wells plate.
Each well has a capacity of 50 µl.
A low rim around the top of each well helps to prevent accidental cross-contamination
All wells are thin walled for an excellent thermal transfer.
Orientation cut is at position A 24 (upper right).
A black printed alphanumeric grid helps sample identification.
Suitable for **PCR** and **real time PCR (QPCR)**.
Dimensions according to the **SBS** standard.
RNase, DNase, DNA and PCR inhibitors free.

96-well flexible PCR plate

Made of polypropylene.

It is suitable for both real time and standard PCR thermocyclers.

This 96-well PCR plate is thin-walled for rapid thermal transfer. Flexible, the plate could be easily cut into sections of 24, 32 or 48 tubes.

An alphanumeric grid helps sample identification, and to facilitate orientation, the bottom right corner of the plate is cut away.

Certified RNase and DNase free.

Dimensions: 120 x 73 x 20 mm.

Dimensions according to the **SBS** standard.

code	colour	case quantity	case weight	case volume
900098	natural	10	0.22	0.0024

96-well low profile skirted PCR plate

Made of polypropylene. Each "low profile" well has a capacity of 200 µl. A low rim around the top of each well helps to prevent accidental cross-contamination and makes easy the sealing with film.

All wells are thin walled for an excellent thermal transfer.

This plate has a skirt approximately 15 mm high that can be filled using automatic fluid handling systems or standard multichannel pipettors.

A black printed alphanumeric grid helps sample identification.

Orientation cut is at position A 12 (upper right).

RNase, DNase, DNA and PCR inhibitors free.

Suitable for PCR and real time **PCR (QPCR)**.

Dimensions according to the **SBS** standard.

code	colour	case quantity	case weight	case volume
900123	natural	10	0.30	0.003

Opaque skirted 96 well PCR plate

Made of polypropylene.

Alphanumeric identification.

The skirt around the plate provides a labelling area. Conical-bottomed wells.

The plate can be handled by robotic equipment and is ideal with automated pipetting systems. To facilitate orientation, the bottom right corner of the plate is cut away.

Well dimensions: 5.5 mm. Well depth: 14 mm.

Code **900093**: Black plate for fluorescent PCR.

Code **900095**: White plate for luminescence (optical absorption) PCR.

Certified RNase and DNase free.

Dimensions: 126 x 84 x 15 mm.

Well plate volume: 100 µl.

code	description	case quantity	case weight	case volume
900093	96 well black plate	5 x 10	1.35	0.010
900095	96 well white plate	5 x 10	1.35	0.010

96 well standard plate

Made of transparent polypropylene.

96 wells standard plate with a capacity of 350 µl each well.

A low rim around the top of each well helps to prevent accidental cross-contamination and makes easy the sealing with film.

All wells are thin walled for an excellent thermal transfer.

A black printed alphanumeric grid helps sample identification.

Orientation cut is at position A 12 (upper right).

RNAse, DNase, DNA and PCR inhibitors free.

Suitable for PCR and real time PCR (QPCR).

Dimensions according to the SBS standard.

code	colour	case quantity	case weight	case volume
900111	natural	10 x 10	2.72	0.027

96-well low profile PCR plate

Made of transparent polypropylene.

Low profile well (15 mm high).

Perfect to work with samples of 100 µl or even less.

A low rim around the top of each well helps to prevent accidental cross-contamination.

The orientation cut is at position H 12 (lower right).

A printed alphanumeric grid helps sample identification.

DNase, RNAse, DNA and PCR inhibitors free.

It is suitable for both standard or Real Time PCR.

Dimensions according to the SBS standard.

code	description	case quantity	case weight	case volume
900110	low profile PCR plate	5 x 20	1.9	0.018

96 well semi-skirt plate

Made of transparent polypropylene.

This plate has a semi skirt ±7.5 mm high.

Each well has a capacity of 200 µl and embodies a low rim around its top which prevents accidental cross-contamination and it makes easy the sealing with foils.

Orientation cut is at position A 12 (upper right).

Alphanumeric identification printed in black.

DNase, RNAse, DNA and PCR inhibitors free.

Dimensions according to the SBS standard.

code	description	case quantity	case weight	case volume
900122	semi-skirt PCR plate	10	0.32	0.003

96 wells low profile, semi-skirted white plate

Specially designed for Roche thermocycler.

Made of white polypropylene. Semi-skirt "low profile" 96 well. Each well has a capacity of 200 µl.

A low rim around the top of each well helps to prevent accidental cross-contamination and makes easy the sealing with film.

Orientation cut is at position H 12 (bottom right).

A black printed alphanumeric grid helps sample identification.

RNase, DNase, DNA and PCR inhibitors free.

Suitable for PCR and real time PCR.

Dimensions according to the SBS standard.

code	description	case quantity	case weight	case volume
900113B	semi-skirt PCR plate	10 x 10	2.96	0.027

96 well, low profile, semi-skirted plate

Specially designed for ABI "Fast" thermocycler.

Made of transparent polypropylene with frosted appearance.

Semi-skirt "low profile" 96 well.

Each well has a capacity of 200 µl.

A low rim around the top of each well helps to prevent accidental cross-contamination.

Orientation cut is at position A 1 (upper left).

A black printed alphanumeric grid helps sample identification.

RNase, DNase, DNA and PCR inhibitors free.

Suitable for PCR and real time PCR (QPCR).

Dimensions according to the SBS standard.

code	description	case quantity	case weight	case volume
900112	semi-skirt PCR plate	10 x 10	2.96	0.027

PCR sealing mat

Manufactured from a non reactive rubber, this PCR sealing mat ensures a secure, leak free seal during the PCR cycling process.

It is designed to seal **96 well PCR plates**, but may also be cut to fit 24/32/48 well plates.

The mat is marked "*this side up*" for a proper positioning into the plate (sharp cone side up). This sealing mat may be sterilized in an **autoclave** or cleaned by immersion in a bleach solution.

DNase, RNase, DNA and PCR inhibitors free.

code	description	case quantity	case weight	case volume
900305	PCR sealing mat	10 x 5	1.20	0.012

Adhesive sealing film

Sealing film for use with microplates, multiwell plates and microtiter plates.

Advantages:

1. Minimises the risk of contamination or reagent spillage during ELISA or PCR processes.
2. Minimises the risk of contamination from tube to tube and from plate to plate.
3. Prevents sample evaporation.

A 5 mm wide strip (opaque white) at the lateral edges of the film helps pull the film from its protective paper and prevents it sticking onto fingers. The film is thermostable and functional from **-70 °C to 95 °C** at 75% humidity.

RNase and DNase free. DMSO resistant.

We recommend to use the "roller" **900330** to ensure a perfect seal.

code	description	case quantity	case weight	case volume
900300	adhesive film	1 x 100	0.23	0.0005
900301	adhesive film suitable for QPCR	1 x 100	0.06	0.0004
900330*	sealing roller	1	0.01	0.0001

Aluminum sealing foil

This type of material is ideal for manual sealing during PCR work, microtiter plates or manipulation and archive.

For high throughput applications from **-80 °C to 120 °C**.

Adhesive backing.

Pierceable with a pipette tip for easy access to sample.

DMSO resistant.

It is recommended to use the "roller" code **900330** for ensuring a perfect sealing, eliminating the danger of evaporation.

Dimensions: 14x8 mm

RNase, DNase and DNA free.

code	description	case quantity	case weight	case volume
900320	aluminum foil	1 x 100	0.28	0.0003
900330*	sealing roller	1	0.01	0.0001

Deep well plate (96 wells or 12 rectangular channels)

Made of medical grade polypropylene, composed of 96 square wells. V-shaped bottom squares, each with 2 ml capacity. Numeration. Alphanumeric mold that facilitates the identification of samples. Widely used for dispensing and storage of liquids, since either by manual or automatic pipetting (robotic).

Resists temperatures from **-80 °C to 121 °C (autoclave)**.

Certified as free of RNase, DNase, DNA and PCR inhibitors free.

Manufactured according to SBS standards. Stackable.

Sealing mat.

Made of **autoclavable** silicone, exclusive for square well plates.

Alphanumeric marking in black for easy identification of wells.

It is pierceable, so it should not be removed to aspirate the sample.

It has 2 tabs on the right side for easy positioning.

mod.	code	description	case quantity	case weight	case volume
1	900198	96 well plate 2.0 ml	5	0.58	0.0032
2	900310	PCR sealing mat	10	0.14	0.0008

96 deep well plate (96 round wells)

Made of medical grade polypropylene, it is made of 96 round bottom wells, each one of 1.2 ml capacity. Printed alphanumeric grid helps sample identification, and to facilitate orientation the bottom right corner of the plate is cut away.

Widely used for liquid handling and storage, with manual pipetting or robotic handling.

It withstands temperatures from **-90 °C to 121 °C (autoclave)**.

Dimensions according to SBS.

Certified free from detectable RNase, DNase, DNA and PCR inhibitors free.

code	description	case quantity	case weight	case volume
900156	96 well plate 2.0 ml	5	0.51	0.003

96 deep well plate (square well, round bottom)

Made of polypropylene. The 2.1 ml well capacity (2.0 when capped) plate is used mainly for compound storage and enzyme assays. An alphanumeric grid helps sample identification, and to facilitate orientation the bottom right corner of the plate is cut away. DMSO resistant. Can be centrifuged up to **6000 xg**.

It withstands temperatures up to **-150 °C. Autoclavable**.

Each well measures 8.3 x 8.3 mm.

Plate dimensions: 41.6 mm high x 127.8 mm long x 85.5 mm wide.

We recommend to protect the samples with the sealing mat code **900306** (DMSO resistant).

RNase, DNase, DNA and PCR inhibitors free.

code	description	case quantity	case weight	case volume
900170	96 deep well plate, natural colour	4	0.47	0.002
900306	sealing mat	24	3.60	0.002

Sample storage system

96 round bottom tubes, supplied in twelve strips of eight tubes each, held in a rack with lid. Rack, lid, tubes and caps are made of **autoclavable** polypropylene, manufactured with the **SBS** standard footprint.

Compatible with all robotic applications and multichannel pipetting systems.

Alphanumeric numbered wells, indelibly printed in black, allowing identification in short light conditions. **DNase, RNase, DNA and PCR inhibitors free.**

Used for serial dilutions, mixing, storage and harvesting of cells, cell growth for cell culture assays and DNA screening, and as an ideal long-term storage system. Caps are sold separately in strips of eight or twelve units, depends on the model; every cap has a tag to make an easy opening and closing.

Tube dimensions (height): 8 x 44 mm

Rack dimensions (with lid): 128 x 86 x 48 mm

code	description	case quantity	case weight	case volume
409009	rack with 96 tubes (8 x 12)	10	1.63	0.010
409010	strips of 8 tubes each	125 strips	0.27	0.007
409011	strips of 8 caps each	125 strips	0.11	0.012
409012	loose tubes	1,000	0.63	0.005

Sample storage system

Compact sample storing system. It consists on a blue rack with a translucent lid, holding 96 loose round bottom tubes (1,2 ml) arranged in 8 x 12. Robotics suitable version (**RC845TP**). **Autoclavable** and stackable, it resists up to **-100 °C**, and embodies a moulded alphanumeric identification.

Rack, lid and tubes made of polypropylene. Caps made of low density polyethylene.

Caps are sold apart in strips of eight units; every cap has a tag to make an easy opening and closing.

Tube dimensions (height, closed): 8,8 x 45 mm.

Rack dimensions (with lid): 118 x 82 x 50 mm.

DNase, RNase free.

code	description	case quantity	case weight	case volume
RC845TP*	rack with 96 tubes for robotics	10	1.14	0.010
409005	strips of 8 caps each	120 strips	0.16	0.002
845	tubes in bulk	1,000	0.60	0.004

* pyrogen free

Sample storage system

Made of a white rack and a transparent lid, with 96 tubes (12 x 8) 1.2 ml (capped, 1.1 ml).

Tubes and rack are manufactured in polypropylene, being autoclavable.

Caps in non **autoclavable** polyethylene.

Caps are acquired apart, in strips on eight units.

It is ideal to work with robots and multichannel pipetting systems, as well as for sample transport, storage, or freezing (it can withstand up to **-80 °C**).

It stands up the majority of chemical agents.

Both lid and rack embody an alphanumeric identification.

The top left edge of the lid is cut for an exact orientation.

Tube dimensions (capped): 9 x 48 mm.

Rack dimensions (with lid): 126 x 81 x 53 mm.

According to **SBS** standard.

code	description	case quantity	case weight	case volume
409004	rack with 96 tubes (8 x 12)	10	1.80	0.009
408002	tubes of 8 caps each	120 strips	0.73	0.005
408005	strips of 8 caps each	120 strips	0.09	0.001
408003	loose tubes	5 x 960	3.88	0.028

03. HEMATOLOGY & BIOCHEMISTRY

Procedures and controls

During the manufacturing process of the tubes for extraction, periodic checks are carried out, among which are:

- Reproducibility dosing control
- Quantity and quality dosing control
- Watertightness control
- Centrifugal Resistance Control

Each case includes a brochure with recommendations of use.

Expiry date on our tubes, anticoagulants and other

• Serum tubes (granules and gel)	24 months
• Serotub Glucose	12 months
• Lithium heparin	24 months
• Iodoacetate heparin	13 months
• Edta	24 months
• Citrate for coagulation	15 months
• Anticoagulants in containers	24 months
• Thrombocyte count and osmotic brittleness	24 months
• Reticulocyte vital staining	24 months

100% Traceability

Our blood collection tubes are individually identified with its code, LOT number and expiry date, so the traceability from its manufacture to the final consumer is guaranteed. **Raw materials traceability. Process traceability. Final product traceability.**

We manufacture our blood collection tubes according to the following:

- **EU Regulation No. 2017/746** on *in vitro* diagnostic medical devices.
- **EN ISO 14971** - Application of risk management to medical devices
- **EN ISO 6710** - Single-use containers for venous blood collection
- **ISO 15223-1** - Medical devices - Symbols to be used on labels, labelling and information to be supplied - Part 1: General requirements
- **EN ISO 13485** - Medical devices - Quality management systems - Requirements for regulatory purposes

Serum glucose serotub

Transparent polypropylene tubes, covered and labelled with detail of lot number, expiration and volume.

With ergonomic cap in inert polyethylene.

Tubes treated with inert additive for rapid clot retraction and serum separation.

As well as inert granules, rounded to avoid possible lesions in erythrocytes at the time of centrifugation and its consequent risk of haemolysis.

These granules act as a barrier that, without being airtight (as in the case of the gel), ensures comfortable pipetting or decanting of serum.

They allow most biochemical, glucose and creatinine measurements to be performed in a single tube, except for CPK and lithium, thus saving the use of two tubes, one for routine tests and the other for glucose.

Presentation: in black bags due to the photosensitivity of the product

Store at room temperature.

It is supplied in plastic racks.

Expiration: 12 months.

code	description	case quantity	case weight	case volume	pallet quantity
600602	13 x 75 for 4 ml blood	12 x 100	4.92	0.033	42

Ask for minimum quantity and delivery time for tube 16 x 100. 10 ml blood.

Silicone and TPE tourniquet

Product intended for the retention of the blood flow by oppression of a corporal limb for extracting blood samples, differentiate a vein, ...etc.

Silicone tourniquet

Dimensions: 18 mm wide, 0.8 mm thickness.
Non toxic, USP, Class VI, silicone. **Autoclavable.**
Material of high transparency and non smelly.

TPE tourniquet

Dimensions: 25 mm wide, 0.6 mm thickness and 450 mm length.
Manufactured with TPE, thermoplastic elastomer. Latex-free product, non cytotoxic and non-irritant.

mod.	code	description	dimensions	quantity	weight	volume
1	GS-02	silicone	box with 10 bands 0.5 m long each	1	0.11	0.001
2	TQ	TPE	450 mm	1,000	7.00	0.019

Serum tubes with clot accelerator and gel serum separator

Made of a clear polypropylene, supplied capped and labelled with an inert polyethylene cap.

The tubes are designed and processed to permit a fast serum and blood clot separation.

Each tube contains a special inert additive which accelerates the coagulation, and the result is a **fast clot retraction**.

The coagulation speed is, doubtlessly, much higher than the obtained with the glass tubes or the other existing tubes on the market.

The inert gel is located, after centrifugation, between the clot and the obtained serum and it works as a totally watertight barrier.

The ergonomic features of the cap design results in a very reliable and easy-to-use cap.

The lot number, expiry date and volume are printed on the label of each tube.

Supplied in plastic racks.

We strongly recommend its usage for biochemistry, routine tests, special biochemistry, markers, hormones, immunology (tube without anticoagulants).

Expiry time in 24 months.

code	description	case quantity	case weight	case volume	pallet quantity
600801	13 x 75 round for 4 ml	12 x 100	5.40	0.030	48
600800	16 x 100 round for 9 ml	6 x 120	6.00	0.040	36

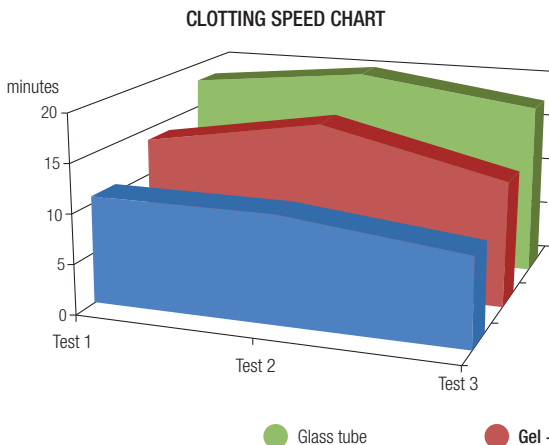

Serum tubes with clot accelerator and gel serum separation

Clotting speed increased: with our tubes processed with gel serum separator and accelerator we improve the clotting speed achieving a 20-25% advantage over glass tubes. The serum is obtained after 15 minutes, depending on the particular working conditions.

Serum volume increased: The volume obtained is higher than the obtained with granules tubes or glass tubes, achieving an advantage around 20%. The gel serum separator tube is the preferred option when analysis requires maximum serum yield from the blood sample.

Recommended in case the objective is to obtain larger serum volume.

Note: Before using, the gel serum separator remains at the bottom, even when the tube is bent.

● Glass tube

● Gel + accelerator

● Granules + Accelerator

Serum tubes with clot accelerator and granule serum separator

Made of a clear polypropylene, supplied capped and labeled with an inert polyethylene cap.

The tubes are designed and processed to permit a **fast serum and blood clot separation**.

Each tube contains a special inert additive which accelerates the coagulation, and the result is a fast clot retraction. The coagulation speed is much higher than the obtained with the glass tubes or the other existing tubes on the market. Allows the obtention of serum in 12 min.

The inert **granules are rounded** to avoid cellular lysis during centrifugation and minimize the risk of haemolysis. These granules are located between the clot and the separated serum working as a retaining wall. It assures a comfortable pipette action or serum decanting. (It isn't a watertight barrier).

The ergonomic features of the cap design results in a very reliable and easy-to-use cap.

The lot number, expiry date and volume are printed on the label of each tube.

Expiry time in 24 months.

code	description	case quantity	case weight	case volume	pallet quantity
600400	13 x 75 round for 4 ml	2 x 1.000	7.90	0.045	32
600300	16 x 100 round for 9 ml	2 x 500	6.10	0.045	32
707094*	bottle of 750 g with separator granules	20	17.50	0.045	40

* Product without CE mark

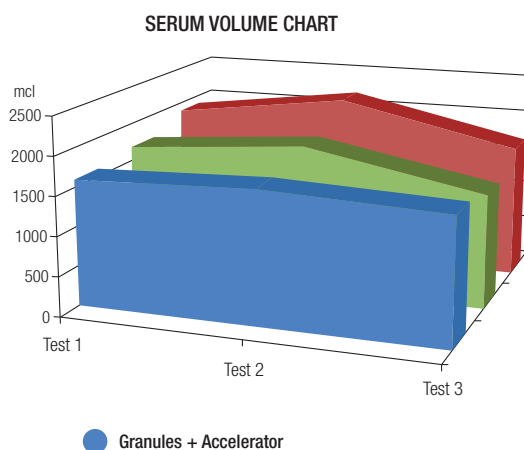

Serum tubes with clot accelerator and granules

Clotting speed increased: with our tubes processed with granules and accelerator we achieve a clotting speed higher than the obtained not only with glass tubes but also with gel tubes. The advantage achieved is around 40-50% over glass tubes. Serum can be obtained starting from 12 minutes, depending on working conditions.

Serum volume increased: The volume obtained is a little higher than the obtained with glass tubes but fewer than the obtained with gel serum separator tubes.

Due to its effectiveness and low price this product is highly recommendable for all routine serum tests.

Lithium heparin tubes

Made of clear polypropylene, supplied capped and labeled, indicating **filling line, lot number, and expiry date**.

The anticoagulant pulverization inside the tube optimizes the mixture and avoids the unnecessary blood dilution.

The anticoagulant mechanism is the inhibition of the thrombin action.

Supplied in plastic racks.
Type of coagulant: **spray**.

Expiry date: 24 months.

code	description	case quantity	case weight	case volume	pallet quantity
601802	13 x 75 round for 4 ml blood	12 x 100	4.10	0.033	42
601803	13 x 75 round for 2.5 ml blood	12 x 100	4.10	0.033	42

Iodoacetate lithium + heparin lithium tubes

Made of clear polypropylene, supplied capped and labeled. A fill line indicates the level of blood required on the label of each tube, as well as the **lot number and expiry date** which are printed on it.

The anticoagulant and preservative pulverization inside the tube optimizes the mixture and avoids the unnecessary blood dilution.

The blend anticoagulant-glucose preservative is ideal for biochemical tests, so it's possible to determine most of the biochemical parameters with only one tube and preserve the product stable for 4 days. It is recommended to maintain the tubes in a dark and cool place (at room temperature).

The tubes are packed in black bags in order to keep them out of the light because the iodum is photosensitive.

Supplied in plastic racks.

Type of coagulant: **liquid**.

Expiry date: 24 months.

code	description	case quantity	case weight	case volume	pallet quantity
602002	13 x 75 round for 4 ml blood	12 x 100	4.40	0.033	42
602003	13 x 75 round for 2.5 ml blood	12 x 100	4.30	0.033	42

Edta: tripotassium

Made of clear polypropylene, supplied capped and labeled.
Tetraceticetilendiamin acid, a tripotassium salt, works as an anticoagulant thanks to its capacity to fix the blood calcium. Because the anticoagulant is pulverized, it allows a mixture with the blood almost immediate.
The quantity of additive is very small so there are no dilution mistakes (this may occur in the tubes with big additive liquid solution volumes). There is no risk of anticoagulant loss when uncapping because it is adhered to the tube walls.
The cap shape, both internal and external design, assures a comfortable and reliable capping.

A volume indication mark, lot number and expiry date on the label of each tube, allow to assure the traceability of the product.

Supplied in plastic racks. Type of coagulant: **spray**.

Expiry date: 24 months.

code	description	case quantity	case weight	case volume	pallet quantity
601603	13 x 75 round for 2,5 ml blood	12 x 100	4.10	0.033	42
601702	13 x 75 round for 4 ml blood	12 x 100	4.14	0.033	42

Edta: tripotassium. Rubber cap

Tubes made of clear polypropylene, supplied capped and labeled. Mauve, pierceable (but not pierced) and plugged cap made of thermoplastic rubber.
Suitable for haematological automatic machines.

The label indicates **code, volume, lot number and expiry date**, assuring total traceability.

Tubes supplied in trays of 100 units.

Type of coagulant: **liquid**.

Expiry date: 24 months.

code	description	case quantity	case weight	case volume	pallet quantity
611604	13 x 80 for 3 ml blood	8 x 100	3.00	0.030	50

Speed sedimentation citrate for pediatrics

System for the determination of the erythrocyte sedimentation rate. Specially recommended for **Paediatrics**. The system consists of a tube and a pipette. The tube includes a pierceable and re-sealable stopper. Filled with 0.08 ml of trisodic citrate 0.106 M for 0.32 ml of blood according to standards of Westergren standard method. The pipette of pressure filling has an inner diameter of 1.25 mm and is graduated. Once blood and citrate are mixed together, introduce the pipette into the tube (without removing the stopper). The blood will automatically reach the 0 level. The results obtained are comparable to those obtained with the standard method (macro).

Expiry date: 12 months.

code	description	case quantity	case weight	case volume

E.S.R. semi micro system TAKIVES with self-levelling system

Pipette graduated from 0 to 160 mm, with a total length of 200 mm and an inner diameter of 2.5 mm, according to the Westergren Method.

The **system accepts a total volume of 1 ml.**

The plunger must be drawn up manually up to a limit inside the pipette to ensure an adequate volume of blood-citrate blend.

Tube made of high transparency polypropylene.

Expiry date: 15 months.

Take a reading after 1 hour and the second after 2 hours

code	description	case quantity	case weight	case volume

E.S.R. with self-levelling system

Code 29: Consists of a polystyrene pipette with self-filling system using a plunger suitable for 12 mm or 13 mm diameter tubes. Graduated from 0 to 180 mm. 1.25 ml blood-citrate mixture is enough for determination.

Expiry date: 15 months.

Code 132832: Consists of a Soda glass pipette up to 180 ml, in white screen printed, with a piston in low density polyethylene incorporated.

Measures: 210 x 4.5 mm. **Expiry date:** 60 months.

Mailing container

Mailing container with safety screw blue cap, both manufactured in polyethylene. Leak proof.

Ideal for 10 ml tubes.

The tube includes a piece of absorbent paper to prevent any leakage.

Container and cap are sold separately.

Dimensions uncapped: 117 x 30 mm.

External mouth: diametre 24,5 mm, internal: 21 mm.

code	description	case quantity	case weight	case volume
401301	mailing container	500	7.70	0.090

Blood group test plate

Made of ultra clear polystyrene.

Features 10 numbered wells.

Stackable.

Dimensions: 160 x 40 x 6 mm.

code	description	case quantity	case weight	case volume
P0100000	blood group plate	25 x 10	3.70	0.014

Syringes

3-piece syringes formed by body, plunger and sealing gasket.

Transparent PP cylindrical body, with support fins and provided with a safety ring that prevents accidental exit of the piston.

With an indelible graduated scale according to the International System of Measurements.

In unitary container, sterilized by ethylene oxide.

Non-pyrogenic and latex free product, PVC and Phthalates free.

For version with needle, contact the sales department.

Common problems in centrifugation

PROBLEM	POSSIBLE CAUSES	REASON FOR MISUSE	SOLUTION
The barrier is not clearly defined	Poor or incomplete serum separation. Barrier is intact and well defined	<p>Incomplete or inhibited coagulation. Non-homogeneous blend of blood and coagulant</p> <p>Early centrifugation, insufficient allowance coagulation time prior to centrifugation</p> <p>Centrifugation xg-setting under appropriate value</p>	<p>The tube was not inverted for 5 times</p> <p>The recommended 30 min. standing time for coagulation was not observed</p> <p>The tube was not centrifuged at or above the minimum, appropriate xg-setting</p> <p>After tube is filled with blood and capped, gently invert the tube for 5 times</p> <p>Wait for 30 min before centrifugation</p> <p>a) Set the centrifuge between 1,000-1,500 xg</p> <p>b) Confirm centrifuge is correctly calibrated</p>
	Barrier is skewed and poorly formed, separation is incomplete	<p>Less centrifugation time than recommended</p> <p>Refrigerated centrifuge</p>	<p>The tube was not centrifuged for the required time</p> <p>The temperature of the centrifuge was lower than the recommended</p> <p>Centrifuge the tube at the appropriate xg-force for at least 10 min</p> <p>a) Keep the centrifuge at a temperature between 24 °C and 26 °C (around 77 °F).</p> <p>b) Thermally insulate the tube and avoid contact with the centrifuge and centrifuge rotor</p>
Blood tubes fracture during centrifugation	<p>xg-force centrifugation exceeded the tube construction</p> <p>Centrifuge not positioned level and/or foreign matter or debris inside the rotor of the centrifuge</p>	<p>The tube was subjected to xg-forces exceeding 1,500 xg</p> <p>a) Shock absorbers or tube stand-off cushions absent.</p> <p>b) The inside of the rotor is not clean</p>	<p>Maintain centrifuge at or below 1,500 xg</p> <p>Install shock absorbers or tube stand-off cushions as required. Remove any foreign agent or debris that may be inside the centrifuge</p>
Cell clumps observed within the separation barrier	<p>Incomplete or inhibited coagulation. Non-homogeneous blend of blood and coagulant</p> <p>Insufficient time before centrifugation</p> <p>Excessive xg-force centrifugation</p>	<p>The tube was not inverted for 5 times</p> <p>The recommended 30 min standing time for coagulation was not observed</p> <p>The tube was centrifuged at above 1,500 xg</p>	<p>Invert the tube for 5 times</p> <p>Wait for 30 minutes before centrifugation</p> <p>Set the centrifuge at a speed below 1,500 xg</p>
Presence of fibrin in serum	<p>Incomplete or inhibited coagulation. Non-homogeneous blend of blood and coagulant</p> <p>Early centrifugation, insufficient allowance coagulation time prior to centrifugation</p>	<p>The tube was not inverted for 5 times</p> <p>The recommended 30 min standing time for coagulation was not observed</p>	<p>Invert the tube for 5 times</p> <p>Wait for 30 minutes before centrifugation</p>
Abnormal assay results	Poor serum quality due to haemolysis	Blood subject to aggressive agitation or rough handling	Handle tube with moderation. Invert gently. Never shake severely or agitate the tube
	Excessive xg-force centrifugation	The tube was centrifuged above 1,500 xg	Set the centrifuge to a maximum of 1,500 xg xg-force

Blood collection tubes with pierceable and re-sealable rubber caps

Manufactured from transparent polypropylene. Robust and resistant to breakage. Tubes feature a unique flexible rubber cap which has two cross cuts and is specially designed to reseal automatically after introduction or withdrawal of the sample. **This system eliminates the need to remove the stopper when introducing or withdrawing blood samples.** Tubes can be used with most manual, semi-automatic and automatic blood sampling machines, and are suitable for transportation by intra hospital pneumatic systems.

Tubes for small blood volumes

Tubes intended for use by health professionals in clinical analysis laboratories and venous blood sample collection units.

Main use for collection of venous blood sample for blood cell count (cell structures at room temperature remain stable for a period not exceeding 4 hours after extraction)

Others: Obtaining plasma (for biochemical determinations in general except for triglycerides by enzymatic methods, glucose, potassium and calcium)

Recommended in paediatrics or for low blood volumes.

Accessory available under request to the sales department.

See speed sedimentation citrate for paediatrics in the page 88.

Anticoagulants and preservatives in containers

Available in bottles of 15 ml.

The dosage of one drop (15 ml = 300 drops) is enough for 5 ml of blood.

Both products have preservatives for stability.

Code **705000** composition: lithium heparin, phenylmercury acetate and distilled water. Prepared according ISO 6710. Heparin concentration between 12 and 30 µl for each ml of blood.

Expiry date: 24 months.

code	description	case quantity	case weight	case volume
705000	Lithium heparine 15 ml	10	0.29	0.00019

Microhaematocrit capillary tubes

Soda neutral glass tubes with a colour-coded print for an easier identification, with sodium heparin (red) or without heparin (blue).

Supplied inside a glass tube with a plastic cap, specifying code, lot and expiry date.

Two lengths available: 70 or 75 mm (± 0,5 mm).

code	description	external diameter	volume µl	case quantity	case weight	case volume
161364	75 mm with heparin	1.4-1.7	75	10 x 100	0.36	0.0006

Capillary tubes sealing wax

Vinyl plastic wax, in a numbered (from 1 to 24) plastic holder.

Suitable for all capillary tubes, specially for those that have to be centrifuged, like micro-haematocrit capillary tubes.

Must be preserved in temperatures from 15 °C to 30 °C.

code	description	case quantity	case weight	case volume
140064	sealing wax	3	0.07	0.0002

Spectrophotometer cuvettes

Disposable cuvettes suitable for most of the open spectrophotometers. Homogeneous dimensions, specially of the surface crossed by the light beam, assuring an optimum transmission level on the whole visible spectral. The material used avoids any possible measurement interference. Due to the strict quality control during the manufacture process, a high reliability is assured. The maximum absorption variations are $\pm 1\%$.

The two sides not crossed by the light beam are ribbed to an easy identification of the cuvette position inside the spectrophotometer measurement chamber, resulting in an easy positioning and removal.

They are supplied in a dust proof, expandable polystyrene box (100 units per box) with lid.

Dimensions: 12.55 x 12.65 x 44.55 mm ($\pm 0,1$ mm).

Light path: 10 mm.

Standard cuvettes

Made of polystyrene for assays in the visible spectral range (340 to 800).

	code	description	case quantity	case weight	case volume

“Fast read” plate for urinary sediment cell count

Disposable plate for determining μL cells in the sample.
Using this system a smaller number of epithelial cells present in each field can be achieved, reducing the possibility of overlapping with other cells. Ensures a more careful and precise result, providing technical staff to determine presence of cellular elements.

code	description	case quantity	case weight	case volume
141746	fast read plate for urinary sediment cell count	100	0.30	0.0008

Sample cups

Cups are made of polystyrene, except code **900008** which is made of HDPE.
Also available under request the 1.5 cup Amelung type with stain ball and the 0.5 cup Sysmex type.

Scintillation vials

Single use vials made of high density polyethylene to minimize solvent losses.
Screw caps made of polypropylene ensure a leakproof seal.
Compatible with most liquid scintillation counters available on the market.
2 models available: code **900100**, standard volume 20 ml, and code **900101**, volume 4 ml, designed for insertion in the 20 ml vial so as to minimize the volume of scintillation liquid.

Dimensions:

Vial 20 ml: 26.5 x 60.10 mm (Ø x h)

Minivial 4 ml: 13.71 x 53.60 mm (Ø x h).

Leak proof screw cap containers

Specially designed for histology, they are provided with double internal security closure. Manufactured in translucent polypropylene with polyethylene ribbed yellow cap. They have moulded graduations in increments of 50 ml, and a ring in the upper part of the container that prevents dripping when decanting liquids. Its leakproof closure makes them ideal for liquid (including alcohols) or solid sample storage.

They meet the standard UNE-EN 14401. Rigid plastic containers. Methods to test the effectiveness of closures.

Supplied uncapped. Check with the sales department for other colors.

HISTOLOGY, MICROSCOPY AND STAINING

Security screw cap containers

Ultra clear polypropylene containers with yellow polyethylene cap.

Watertight closure: the cap, with an innovative shape, has a double closure. Graduated Container.

The base and the cap are ribbed so the handling with gloves is comfortable and reliable.

There is a ring in the upper part of the body, in order to avoid the dripping in case of liquid decanting.

Six different capacities from 20 to 120 ml.

Find more information about this product on chapter **Containers. Sampling**

Paraffin

It has a low dimethylsulphoxyde (DMSO) content and a quick penetration of tissues for 2 micron cuts.

Melting point: **56/58 °C**. Can be used with usual solvents. Ideal for histology. 1 Kg presentation.

code	description	case quantity	case weight	case volume
440139	Paraplast Plus®	8 x 1Kg	8.50	0.023
440139D	Pure paraffine with DMSO	8 x 1Kg	9.0	0.025

Histology mould

Single use clear polypropylene mould.

The smooth interior ensures the paraffin does not adhere to the mould. The special material used ensures excellent thermal exchange. Available in various sizes. Suitable for most of the cassettes.

External dimensions: 50 x 37.2 x 12 mm.

mod.	code	well dimensions mm	case quantity	case weight	case volume

Tissue embedding sponge

Foam sponge, very useful for small specimens in biopsy tests.

Fits standard cassettes.

Avoids sample loss though drain holes when sample is processed.

Does not affect paraffin drainage.

code	dimensions mm	colour	case quantity	case weight	case volume
192922.04	32 x 26 x 3	blue	500	0.08	0.003

Biopsy Bags

Used to hold small biopsy and histological specimens during processing. Manufactured from solvent resistant Polyester, effectively prevent the deformation. Thin mesh (0.2x0.2 mm) provides excellent fluid exchange and avoids small sample loss. Convenient peel-open bag allows for placing and removing specimen rapidly.

HOW TO USE

1. Put the biopsy in the bag and fold its end
2. Place it the cassette and enclose to process as a usual processing
3. Extract the bag from the cassette
4. Open it with care extending the edges
5. Extract the sample for embedding in paraffin

HISTOLOGY, MICROSCOPY AND STAINING

Cassettes for tissue. Histosette I

- Made of polyacetal.
- Air vents allowing more efficient filling with paraffin.
- Safety closure.
- With one-piece integral lid.
- To lock the cassette, just separate apart the lid, turn it round and lock it into the base of the cassette.
- They may be opened and closed as many times as required.
- **External dimensions:** 40 x 28 x 6 mm (with closed lid).

Writing area at 30°. **Hand cassettes.**

64 cuts (1 x 5 mm) in base and lid, distributed 16 x 4

code	colour	case quantity	case weight	case volume
454141	white	3 x 500	5.40	0.039

Ask for minimum quantity and delivery time for other colours.

Biopsy cassettes. Histosette I

Frontal writing area at a 30° angle. **Cassettes for manual use.**

Material: Acetal

Designed to hold biopsy specimens during the embedding process, as well as in a storage folder.

code	colour	case quantity	case weight	case volume
454241	white	1,500	5.74	0.037

HOW TO USE

Mega cassettes

Made from polyacetal.
With an integral lid.
Designed for larger tissue samples.
Holes are 1 x 5 mm.
Cassette dimensions: 26 x 40 x 13 mm.

code	colour	case quantity	case weight	case volume
44125	white	500	2.57	0.025

Ask for minimum quantity and delivery time for other colours.

Cassettes for tissue. Histosette II

- Made of polyacetal.
- Hinged lid: can be opened and closed as often as necessary.
- Supplied assembled, saving time and making storage easier.
- Air vents allowing more efficient filling with paraffin.
- Easy handling with one hand.
- Safety closure (see figure).
- Writing area slanted at a 45° angle, suitable to be used with most labelling instruments.
- **External dimensions:** 41 x 28 x 6 mm.

64 cuts in base and lid. **Hand and automatic cassettes.**
Cassettes and lids are available: pre-mounted, or with the lid separated in another case.

code	colour	case quantity	case weight	case volume
Cassettes with the lid pre-mounted:				
44140	pink	3 x 500	5.00	0.026

44145	blue	3 x 500	5.00	0.026
44147	green	3 x 500	5.00	0.026

*2 dispensing boxes with 500 cassettes each plus one box containing 1.000 lids.

Cassettes for biopsy. Histosette II

Made of acetal polymer. 224 holes. 1 mm square openings to maximize fluid exchange and to ensure proper drainage. **Hand and automatic cassettes.**
Cassettes and lids are available: pre-mounted, or with the lid separated in another case.

Security closure

HISTOLOGY, MICROSCOPY AND STAINING

Biopsy cassettes

Recommended for THERMO printers.

Manufactured in POM, resistant to the chemical action of the solvents used in histology. Available for biopsy, with 0.9mm square holes, and for fabrics, with 0.5x1mm rectangular holes.

With 2 large marking areas on the sides and another on the front, 45°. The hinge design ensures that the cassette and its lid are always attached even if it is opened and closed frequently, avoiding any loss of the sample. Supplied in 10 sleeves of 75 cassettes plus 1 zip bag with 750 caps.

For other colors, check with the sales department.

code	type	colour	case quantity	case weight	case volume
555260	for biopsy	white	750	3.08	0.015

Biopsy and tissue cassettes

Recommended for LEICA & SAKURA, PRIMERA and SAKURA TISSUE-TEK SMARTWRITE printers.

Manufactured in POM, resistant to the chemical action of the solvents used in histology. Available for biopsy, with 1.6mm square holes, and for tissues, with 0.5x1mm rectangular holes.

With 2 large marking areas on the sides and another on the front, 35°. One piece design and snap closure. Supplied in 25 sleeves of 40 cassettes, with open lid.

For other colors, check with the sales department.

Biopsy and tissue cassettes

Made of POM, resistant to the chemical action of solvents used in histology. Measurements: 28 x 40 x 7mm.

Available for biopsy, with rectangular holes of 5.0 x 1.0 mm.

Available for tissue, with square holes of 0.9 x 0.9 mm.

With two large labelling areas on the sides of the cassette and a front writing surface inclined at a 45° angle, adaptable to most cassette labellers. Colour: white.

Compatible (not exclusive) with: Leica IPC®, SAKURA®(Leica OEM), Laser printer® (UV type) y Vogel® (needle).

Laboratory storage cabinet

Designed especially for the storage of microscope slides, histology cassettes and embedding rings. Universal models interchangeable with other cabinets on the market. All parts of the cabinet are stackable. Manufactured from enameled metal. Colour grey. You can make up your own composition from one or several of the following elements:

- Modular cassette drawers
- Modular microscope slide drawers
- Top
- Base
- Wheels base

All modules are stackable.

Modular top (1)

code	external dimensions mm			unit weight	unit volume
	height	length	width		
DS51	26	485	480	2.18	0.007

Modular cassette drawers (2)

Cabinet consisting sliding drawers.
The cabinet can hold approximately 910 embedding rings.

code	external dimensions mm			unit weight	unit volume
	height	length	width		
DS36	91	485	480	9.56	0.033

Modular microscope slide drawers (3)

Consisting of 14 sliding drawers to hold a total of approximately 5,600 microscope slides of 26 x 76 mm.

code	external dimensions mm			unit weight	unit volume
	height	length	width		
DS10	146	485	480	12.50	0.044

Modular base (4)

To fit all modular cabinets and drawers.

code	external dimensions mm			unit weight	unit volume
	height	length	width		
DS52	76	485	480	1.59	0.019

Modular base with wheels (5)

To fit all modular cabinets and drawers.

code	external dimensions mm			unit weight	unit volume
	height	length	width		
DS63	146	485	480	9.24	0.070

Forceps

Made of polyoxymethylene. Colour: orange.
Self-sprung forceps with rounded ends.
Code **19503**, the inner part of the tip is ribbed to enhance sampling. Ribbed for a better handling.
Autoclavable. Flexible.

code	length mm	case quantity	case weight	case volume
19500	115	5	0.23	0.0006
19501	145	5	0.05	0.0001
19503	250	5	0.17	0.0043

Economical storage box

This box, complete with a lid, is specially designed for the storage of histology cassettes.
Made of heavy-duty cardboard for long term storage.
Each box stores up to 250 cassettes or 160 embedding rings.

Dimensions: 455 x 235 x 50 mm.

code	description	case quantity	case weight	case volume
DS42	waterproof cardboard	18	5.30	0.130

Modular storage drawers

Made of high impact polystyrene, this set consists of 6 stackable drawers (7 slots per drawer) providing permanent storage and identification of up to 165 embedding rings or 250 cassettes per drawer (total capacity: 1,500 cassettes).

Dimensions: 400 x 230 x 340 mm.
Front: black colour. Sides: grey.

code	description	case quantity	case weight	case volume

Slides

Standard size: 26 x 76 mm (\pm 0.2 mm)

Thickness: 1.1 mm (\pm 0.1 mm)

Clear, **pre-washed glass**. Ideal for routine analysis.

Displayed in cases of 50 units.

Each case is vacuum flow-packed to protect them from dirtiness.

Each case includes a bag of silica salt. With improved matte band for greater comfort of use: it offers better writing and prevents the slides from sticking together.

Available with polished or cut edges of 45° and 90°.

Expiry date: 24 months.

	code	edges	angle	corners	matte area	case quantity	case weight	case volume

F	D100006	grounded	90°	non clipped	yes	50 x 50	14.20	0.014

Cover slides

Standard size: Different according each model. (Please check the table below)

Thickness: 0.145 mm (\pm 0,015 mm)

Clear, **pre-washed glass**.

Specific use: protection of the sample and lens.

Supplied in cases of a hundred or two hundred units (depending on the code).

Each case includes a bag of silica salt, and is supplied vacuum in tropical pack.

Easy opening, no need for scissors. New improved box which minimize the risk of pack breakage and ensure a better lock.

code	dimensions mm	case quantity	case weight	case volume

STAR FROST® ADHESIVE slides

Standard size: 26 x 76 mm (± 1 mm).

Thickness: 1 mm (± 0,05 mm).

High definition, **pre-washed glass.**

Hydrophobic. No stain residues, no proteins in the surface.

Grounded edges.

Marking area: Featuring a 20 mm wide section. This special printed area is resistant to all common chemicals used in the laboratories, and may be marked with pencil, ballpoint pen, marker and different laboratory-printers (e.g. Leica XPS). Thanks to the single side printing the user always knows the best surface to be used.

StarFrost® Adhesive slides do not show striae and disturbing background staining such as the blue or red background obtained with Haematoxylin and Eosin-staining of tissues on Albumin coated glass, or the brown background obtained during the Immunoperoxidase or In-situ-DNS-Hybridisation process. They are ideal for molecular-hybridization, as being DNase and RNase free there is no need of washing them with chromic acid. **Available with ground edges 90°.**

Supplied in boxes of 50 units.

The final packaging (20 boxes) is protected by an aluminum film packaging that protects against humidity (**tropical pack**).

Complies with ISO 8037/1 (European standard). **Expiry date:** 14 months.

Star Frost® Adhesive slides are treated with silane-coating, which ensures cell-and-tissue-adhesion and supports the forming of covalent bonds between the tissue and the glass surface through electrostatic attraction. So tissue and cell substrates stick rapidly on the surface without using further adhesives or protein coating media, saving costs and time. As the underside is untreated, the Star Frost® Adhesive slides do not tend to stick when stacked or transported as with other competitive products.

Slide printer microscope slides

Measures: 25 x 75mm

Thickness: 1.1mm

Made of clean, clear, degreased glass with polished edges and frosted white, hydrophilic, clean and washed marking area. Resistant to all common laboratory chemicals, high pH, routine stains, etc. and suitable for all common sterilization methods. It is possible to mark with pen, pencil and laboratory marker.

Suitable for manual use and use in printers such as Thermo Slide-Mate® (Thermo-Fisher) slide printer & Signature® (first) slide printers.

For other colour, ask to the sales department.

Expiry date: 18 months

code	angle	corners	matt area	case quantity	case weight	case volume

D100011	90°	non clipped	yes	50x50	14.2	0.014

Adhesion microscope slides

Measures: 25 x 75mm

Thickness: 1.1mm

Made of super white glass with positive charge coating specially developed for use in immunohistochemistry (IHC) and other more complex applications. It offers a great adhesion of the tissue on the surface of the slide. In addition, it also improves staining itself. Hydrophilic surface tension and grounded edges.

Suitable for use in manual IHC staining, automatic IHC staining with Leica and Dako automated IHC Stainers and routine H&E staining of detachable tissue sections.

Models D100024 and D100025 are also recommended for Roche Ventana automated IHC Stainer.

Expiry date: 15 months

Microscope slide labels 23 x 23 mm

Write on these permanent adhesion labels and stick them onto microscope slides for better identification.

White colour.

Each sheet contains 40 labels (8x5).

Page size: 13.3 x 19 cm.

code	quantity	weight	volume
901600	1,000 labels	0.14	0.0001

Mounting medium for microscopy

VITROCLUD® quick-hardening mounting medium for microscope preparations. Neutral and colourless.

Short hardening time (20 min). Refractive index at room temperature: 1.5. Resistant to heat, cold (down to -17°C), humidity and light including UV rays. It is recommended to close the container immediately after use.

If the medium becomes too viscous, add Xylene.

Supplied in aluminum bottles for a safer storage.

Store at maximum 20°C .

code	description	case quantity	case weight	case volume

Staining tray

Made of ABS.

It will accept 10 or 20 slides on plastic rails covered by a polymer strip to perfectly hold slides even if tray is held at an angle (see picture A).

When humidity is required, wells between rails may hold water, and raised rails will avoid water from touching the slides.

It features a draining plug to ease the emptying of the tray (see picture B). Four rubber feet ensure stability.

Cannot be used with acetone and chlorinated hydrocarbons.

Staining jars with lid

Material: **autoclavable TPX**.

Two options available: vertical, "Hellendhall" type (Code **19335**) horizontal "Schiffertecker" type (Code **19351**).

It is recommended to use slides up to 2 mm thick.

code	description	case quantity	dimensions mm	case weight	case volume
19355	vertical, for 8 slides	4	58 x 53.5 x 86	0.28	0.002
19351	horizontal, for 10 slides	4	76 x 65 x 45	0.32	0.002

Staining jar and dish

Dish made of polypropylene and jar made of **autoclavable TPX**. The jar is supplied with two lids. The first lid provides evaporation free storage of staining liquid when the dish is not in use. The second includes a slot to allow staining dish insertion.

Code **19353**: height (with lid) 70 mm, height (without lid) 65 mm, length 100 mm and width 75 mm.

Code **19354**: height 21 mm, length 83 mm, width 70 mm and length (handle) 160 mm.

It is recommended to use slides up to 1 mm thick.

code	description	case quantity	case weight	case volume
19353	jar with 2 lids	4	0.49	0.006
19354	staining dish for 20 slides	2	0.06	0.001

Staining system

Slide staining system compound of a range of jars, and a 12 slides staining rack. Different jar colours allow the user to distinguish each stage of the staining process. Jar and rack made of **autoclavable** POM (polyoxymethylene), resistant to staining agents as alcohol, xylene, etc. (not phenol). The jar embodies a hinged lid which allows storing the jar with the content. Reagent capacity: 80 ml.

Jars can be loosely joined to each other laterally (picture 1).

The rack features a handle in the hinged lid, and can be placed up when handled out of the jar. Since the slides are placed vertically in the rack, their writing area will not be stained, allowing their removal without the use of forceps (picture 2).

Rack and jar withstand from **-170 °C** and **121 °C**.

Jar dimensions: 64 x 76 x 92 mm.

Rack dimensions: 60 x 64 x 97 mm.

code	description	case quantity	case weight	case volume

191108	dark grey rack	6	0.32	0.0024

Coplin type staining jar

Jar made of opaque white, unbreakable and **autoclavable** polypropylene, designed for staining 5 standard microscope slides.

Rectangular container with rounded base and screw ribbed flat cap with an inner ring for preventing leakage.

Used as a storage system, it can hold up to 10 slides (2 per groove).

Dimensions: Base diameter: 60 mm.

Height of jar: 110 mm. Height of jar with cap: 114 mm.

It is recommended to use slides up to 1.1 mm thick.

code	description	case quantity	case weight	case volume

Slidefolders

Available in 2 materials, in polystyrene or in cardboard. They can contain 20 standard slides.

Polystyrene model: The base containing the slides is numbered from 1 to 20. Resistant from **-80 °C to 100 °C**.

Not autoclavable. The transparent cover, by way of two windows, is foldable. Very easy opening. The two covers being closed, for the protection of the slides. The identification of the sample labels can be seen perfectly. For the protection of the slides the two covers may be closed.

The slides are easily removed by pressing with one finger on the side. Stackable.

989919	205 x 340 x 9	paperboard	white	50	15	0.037

* Minimum unit of sale 5 units.

Slide tray

Made of high impact polystyrene. It will hold up to twenty standard slides. The slide tray is easily stackable and will take minimum space on any shelf or laboratory counter.

Not autoclavable.

External dimensions: 206 x 299 x 18 mm.

See our slides on pages 107-109

code	colour	case quantity	case weight	case volume
989956	white	10	0.91	0.013

Slide trays

Very light polystyrene trays.

White colour.

Stackable

Slide mailer

Made of polypropylene. Designed for slide transport and protection. To send by mail we recommend to use special envelopes.
Compartment shape ensures tight fit: no risk of damaging slides.
Easy snaplock. but not indicated for liquid samples.

mod.	code	material	slide capacity	dimensions mm (length x width x height)	case quantity	case weight	case volume

HISTOLOGY, MICROSCOPY AND STAINING

Slide tube mailer

Tube in polypropylene for mailing, staining and storing of 4 standard slides.
Leakproof cap made of high density polyethylene in pink colour.
Incorporates a **tamper evident locking mechanism** that can be activated whenever user decides.
The cap has one space to insert a colour disc as identification (**40911A**, chapter 6. Tubes and microtubes).
Being transparent helps the user to notice if there are slides in it, an advantage in front of the popular white transparent tubes.
Internal volume: 12 ml.

Dimensions: 35 x 87 mm (external). Internal diameter: 27 mm

code	description	case quantity	case weight	case volume
19926	tamper evident tube	100	2.00	0.018

Slide storage boxes

Manufactured in ABS, beige or blue colour. Economical boxes to store or transport 25, 50 or 100 slides.

Safe closing and easy opening.

They include numbered sheets with a labeling space in the bottom of the case and in the inner side of the cover (excepting model 1, which does not include the one in the inner side of the cover).

Models 2 and 3 have a special design assuring a good stability when stacked.

It is recommended to use slides up to 2mm thick.

mod. 2, 3

Cylindrical slide mailer

Polypropylene. Ideal for storing and transporting 5 to 10 slides in complete safety. The deep threaded container provides a leakproof seal for transport.

It is recommended to use slides up to 1.2 mm thick.

code	description	case quantity	case weight	case volume
19922	for 10 slides	10	0,33	0,0028

Slide storage boxes

Manufactured in **ABS** for 100 slides. The internal cork lining prevents damage to stored slides. To ensure proper slide identification, each slot is numbered to correspond to the slide inventory sheet on the inside cover of the box. Stackable.

Dimensions: 208 x 162 x 32.

It is recommended to use slides up to 1 mm thick.

code	description	case quantity	case weight	case volume
19278.2	red, for 100 slides	1	0.37	0.002
19278.3	white, for 100 slides	1	0.37	0.002

Microscope slide boxes

Made of high impact grey polystyrene, those boxes are designed for slides. Each slot is numbered and can be cross-referenced with the corresponding index card supplied with each box.

Boxes are virtually unbreakable. Stackable.

Dimensions mm: 230 x 97 x 35 (50 slides), 230 x 180 x 35 (100 slides).

It is recommended to use slides up to 2 mm thick.

19277.1	for 50 slides	24	3.40	0.018

Automatic slide dispenser

Made of ABS and PS, this dispenser can hold up to 50 standard slides. Slides are dispensed individually by rotating the knurled knob on either side of the moulded base.

It is recommended to use slides up to 2 mm thick.

code	description	case quantity	case weight	case volume
19540	for 50 slides 26 x 76 mm	1	0.20	0.002

Slide storage system for 100 slides. Stackable

Made of high impact polystyrene. It can hold up to 200 standard slides.

Made of a box with a transparent lid with an easy opening and an internal removable rack.

This removable rack is divided into two parts with 50 numbered slots in each one, so 100 slides can be separately placed and their strips can be read. For space saving purposes, you can double the amount of slides simply by storing 2 slides per slot, so each part can hold up to 100 slides resulting in a total capacity of 200 slides. They can also be used without the internal rack, so the capacity reaches 400 slides.

Stackable. The internal rack allows discarding all the slides at the same time. The frontal part of the box can be written.

External dimensions: 82 x 245 x 86 mm.

code	colour	case quantity	case weight	case volume
19279.5	blue	10	3.30	0.023
19279.7	green	10	3.30	0.023

Other colors: consult with sales department minimum sale quantity and delivery time.

Slide storage system for 50 slides. Stackable

Same characteristics as previous codes, it has half capacity. Each part of the inner rack can hold up to 25 separate slides with a total capacity of 50 slides, or for space saving purposes it has a total capacity of 100 slides by storing 2 slides in each slot.

External dimensions: 82 x 140 x 86 mm.

code	colour	case quantity	case weight	case volume

Maximum volume: 31,1 ml.

Recommended volume: 25 ml.

CONTAINERS. SAMPLING

30 ml container with boric acid

This container includes a boric acid preservative which allows the storage and transport of the urine sample to the laboratory. The boric acid supports the viability of the bacteria while preventing further multiplication. This preservative does not alter the characteristics of the urine and will not affect analysis. The bacteria remain viable for 24-48 hours or more, depending on the type of microorganisms. Boric acid quantity: 0.4 g. **Sterile by ethylene oxide.**

Recommended volume: 50 ml.

STERILE A STERILIZATION TYPE: in this case the parts are not sterilized at the end of its manufacture process since is the process by itself which is able to obtain a sterile product. This is because the entire process from injection of different plastic components to the assembly is protected by a sterile atmosphere, thanks to the cowl of the entire installation and the placement of laminar flows that create an overpressure sterile air inside the facilities.

CONTAINERS. SAMPLING

Graduated 60 ml containers

Made of transparent polypropylene.
Moulded graduation in 5 ml increments.
Red polyethylene cap, biflex.
For other cap colours ask the minimum order quantities.
Supplied capped.

Dimensions:

Urine container set

Urine collection system designed to save space in the lab, and to be used when urine samples need to be collected into tubes for a subsequent centrifugation. Designed to be user friendly. The patient urinates in the 150 ml plastic cup and then pours the urine into the tube. Once the tube is filled up, the patient caps it and delivers the sample to the lab, where the health assistant will fill in the label with the required data. The patient just has to follow the hospital or laboratory instructions. **Manufactured under aseptic conditions.** Bag printed with batch number and expiry date. Easy pouring. We can manufacture sets with boric acid.

"Fast read" plate for urinary sediment cell count

Disposable plate for determining µl cells in the sample. Using this system a smaller number of epithelial cells present in each field can be achieved, reducing the possibility of overlapping with other cells. Ensures a more careful and precise result, providing technical staff to determine presence of cellular elements.

code	description	case quantity	case weight	case volume

60 ml vacuum container with an innovative sterility seal

New urine sample collection bottle with vacuum system manufactured in Deltalab under sterile conditions (Sterile A).

Advantages:

- Plastic packaging is eliminated due to the incorporation of the sterility seal on the bottle itself and this means a significant reduction in plastic waste of approx. 32%.
- This new bottle has a large mouth diameter of 56mm which offers great convenience to the user.
- A large amount of raw material is saved, resulting in a much more sustainable product.
- Thanks to its smaller size, it saves considerable space in transport and storage.
- The label is also a key element of this new product, containing all the necessary and regulatory information for its use and guaranteeing total traceability of the sample.
- Its innovative design with the needle overmoulded (and not threaded) avoids any kind of leakage.
- The low needle position minimises the residual dead volume that will remain in the bottle.
- Compatible with the vast majority of vacuum urine tubes on the market.

Environmentally friendly

60 ml vacuum container with an innovative sterility seal

Its 60ml volume allows optimisation of the collection space, adapting to health protocols and at the same time achieving clear functional, logistical and environmental advantages.

The vacuum system ensures safe transfer of urine from the bottle to the tube, eliminating the risk of leakage, splashing or cross-contamination in the collection tube.

This is a completely hygienic and safe system.
It prevents sample loss and avoids the contamination of the sample, the user or the work environment.

code	description	steril	case quantity	case weight	case volume	cases pallet

409520	60ml flask with seal + vacuum 9ml tube	STERILE A + R	250	8.84	0.11	16

* Consult with the sales department for individual bagged vacuum containers and customization options.

* This new container is compatible with the 408900.K and 408910.K vacuum tubes and other tubes on the market.

Dimensions:

A: 47.0 mm; B: 61.3 mm; C: 51.4 mm.

Maximum volume (without lid): 82 ml.

Recommended volume: 60 ml.

CONTAINERS. SAMPLING

Containers and tubes for vacuum system

120 ml containers designed to use with vacuum tubes. It allows a clean transfer of the urine from the container to the vacuum tube.

Manufactured in transparent **Polypropylene**.

Leakproof cap made of yellow **polyethylene**, with an internal obturating ring. It includes a cannula with a needle inside protected by a rubber cap and a plastic suction nozzle.

The cap features a label that seals the cannula in order to prevent contact with the collection needle. The container features a wide marking area for sample identification and a graduation that helps to quantify the sample when uncapped. Once capped, the graduation is inaccurate as the volume is altered by the cannula.

Maximum volume with cap: 120 ml,

Recommended volume: 60 ml.

Tubes in PET produced with the inner cap in caoutchouc and outer cap in yellow polyethylene. Incorporating a label for sample identification, with white background and a transverse line in yellow to easily see that it is a tube for urine. Printed with the lot, expiration date, CE mark, volume of suction, manufacturer, and only one-use symbol.

Label dimensions: 36 x 20 mm.

Supplied in foam racks of 100 units, shrink-wrapped and labelled.

**This is a completely hygienic and safe system.
It prevents sample loss and avoids the contamination of the sample, the user or the work environment.**

Rectangular graduated until 3 litres container with handle

Product designed for collection of 24 hours urine samples.
Container made of polyethylene and cap of polypropylene.

Brown opaque body and cap depending on the model:

- **408600** Yellow cap with vacuum system
- **408601** Yellow cap with vacuum system with long cannula
- **408610** Standard white cap

The three of them are completely leakproof thanks to its sealing ring and ensure a total sealing of the sample.

The vacuum system ensures a clean transfer of the urine from the container to the vacuum tube and prevents the risk of cross contamination in the handling of the sample. It also avoids sample loss by splashing or outpouring.

The container has a handle with ergonomic empty space to facilitate a much more comfortable dump and the manual transport of the sample.

It incorporates a translucent vertical stripe on one side where the graduation allows the control of the level of sample containing. Graduated each 100 ml, to 3,000 ml.

Total capacity: 3.3 l.

Unit weight (without cap): 115 g (\pm 3 g).

Cap weight (vacuum system): 8.2 g (\pm 0.2 g).

Cap weight (standard system): 5.5 g (\pm 0.2 g).

*Suitable for vacuum tubes **408900.K** and **408910.K**.

Security screw cap containers

Ultra clear polypropylene containers with yellow polyethylene cap.
They have moulded graduations in ml.

Supplied uncapped with the caps and containers in the same box.

Ideal for the pneumatic transport of liquid samples, including those that have phormaline, because they have a watertight closure. The cap, with an innovative inner shape, has a double closure. (see the figure). The base and the cap are ribbed so the handling with gloves is comfortable and reliable. There is a ring in the upper part of the body, in order to avoid the dripping in case of liquid decanting.

For other cap colours (blue, orange, magenta), ask for the minimum order quantities.

Leak proof screw cap containers

Specially designed for histology, they are provided with double internal security closure. Manufactured in translucent polypropylene with polyethylene ribbed yellow cap. They have moulded graduations.

Their leakproof closure makes them ideal for liquid or solid sample storage. They meet the standard UNE-EN 14401.

Supplied uncapped.

See more information about this product in the **chapter Histology, microscopy and staining**

Cylindrical container graduated up to 2 litres with handle

High density polyethylene container and cap. Ideal for 24 hour urine collection and any other liquid samples.

We recommend references with white and ribbed cap, that features a pharmaceutical grade liner, **which eliminates the need for an insert plug**, allows a better handling and provides a watertight seal.

Containers are graduated in 50 ml increments up to 2 l. Include a convenient handle for an easy single-handed use.

Base diameter: 108 mm.

Height, cap included: 290 mm.

Cases per pallet: 16.

Codes **408001.1** and **408001.0** are individually wrapped by retractile system.

Ask for other versions cap colours, capped containers and sterile containers.

Rectangular containers, graduated up to 2 litres

2-litre rectangular bottles made of high-density **polyethylene**. Natural translucent or opaque brown body graduated in relief every 50 ml up to 2,000 ml. Includes a side slit for easy handling. Screw cap made of high-density polyethylene.

Internal diameter of the mouth: 66.5 ± 1 mm. **Weight without cap:** 95 ± 3 g.

Height without cap: 251 ± 1.5 mm.

Length: 125.5 ± 1.5 mm. **Width:** 85 ± 1 mm.

Overflow capacity: 2,360 ± 50 ml.

The bottles are supplied with caps in a separate bag.

Code 407001/T is supplied capped. Codes 407008, 407008.0 and 4070080BT are supplied capped and shrink-wrapped.

Various versions of the cap according to the reference (see table below).

The white cap has an internal seal that acts as a shutter and guarantees total tightness and is ribbed for a better grip.

* Internal joint that acts as a shutter and guarantees a tightness

Squared containers, graduated up to 2.7 l

High density polyethylene container and cap. Ideal for 24 hour urine collection and other liquid samples. The ribbed cap features a polexan liner, which **eliminates the need for an insert plug**, allows a better handling and provides a watertight seal. Containers are graduated in 50 ml increments up to 2.7 l. Ergonomically designed for single-handed use. A ring on the neck of the containers avoids dripping when pouring.

Length x width: 131 x 124 mm (± 1 mm).
 Height, cap excluded: 244 mm (± 1.5 mm).
 Individually wrapped models are supplied capped.
 Cases per pallet: 12.

50 ml hinged lid container

Specially designed for **milk, wine and agroalimentary oil**, although it is also suitable for other liquid or solid samples.

Recommended for its use with **FOSS® and DELTA® analytical systems**, among others.

Made of **autoclavable** polypropylene. Tamper evident Lid, attached to the body by means of a hinge.

The lid is conceived to maintain 90° after its opening, enabling this pot to be used with just one hand. It has a frosted squared surface for identification. Excellent mechanical and chemical resistance.

* Consult the sales department for bottles in different colors.

Security screw cap containers

Natural colour high density polyethylene containers. Capacities: 30, 60 and 125 ml. Ideal for liquids. 60 and 125 ml containers: Bottles with screw cap, leakproof closure with child-proof system and split seal. The cap is compound by two pieces that turn around themselves avoiding the cap to be opened, working as a security closure avoiding the accidental manipulation. To open the cap push it down following the figure on the cap. The sealed caps need to be unscrewed to break the seal, showing that it has not been manipulated. 30 ml container **444603202** has a security seal, not the child-proof system closure. Pallet cases quantity: 16.

Whirl-Pak® bags

Made of a **low density polyethylene** blend, resulting in a **very resistant** and **transparent bag**. Suitable for both solid and liquid samples. The plastic thickness depends on the model (57 to 102 µ). **Hermetic closure** by rounded and flat metal rods (code 200356). Whirl-Pak® bags stand out for their unique feature: the seam of each bag is **made in one piece, which eliminates the risk of loss by the corners of the bag**. All bags (except code 200372) are **sterile by ethylene oxide**. All bags (except code 200372) are **made with materials suitable for food use**. All bags have rounded rods except code 200356 which has flat rods. There are some codes with white bands to write.

Instructions for use of Whirl-Pak® bags

1. Tear off top of bag along perforation.

2. Use pull tabs to open bag.

3. Place sample in bag.

4a. Hold bag by wire ends and whirl three times to close.

4b. Or, fold the tab over tightly three times to close (used to close larger bags).

5. Bend wire ends onto bag.

Whirl-Pak® bags with flat wires

Same features as those from the following page but with a flat thicker wire instead of rounded wire resulting in a safer closure.

With white write-on strip.
Made with materials suitable for alimentary use.
Sterile by ethylene oxide.

1. Rounded wire
2. Flat thicker wire

code	capacity ml	dimensions cm	thickness microns	case quantity	case weight	case volume
200356	540	11.5 x 23	64	500	2.18	0.0074

Whirl-Pak® stand-up bags

Same characteristics as Whirl-Pak® standard bags. However, they have a flat bottom which permits them to remain stand up when the sample is inside the bag. This allows to have both hands free when working so you can add or to extract the content comfortably. No need of any rack. Working as a beaker or bottle, when they are empty they take up much less space.

They have a write-on white strip.
Made with materials suitable for alimentary use.
Sterile by ethylene oxide.

code	capacity ml	dimensions cm	thickness microns	case quantity	case weight	case volume
200361	540	11.5 x 23	64	500	2.50	0.017
200365	2,070	19 x 38	102	250	4.52	0.019

Sterile Whirl-Pak® sampling bags

Suitable for both solid and liquid samples.

Leakproof closure by several metallic rounded sticks when you turn closure bands three times (see picture).

No autoclavable. Do not use temperatures over to 82 °C.

Sterile by ethylene oxide.

Made with materials suitable for alimentary use.

Suitable for liquid nitrogen.

Without strips

Syringes

3-piece syringes made of body, plunger and sealing gasket. Transparent PP cylindrical body, with support fins and provided with a ring Safety that prevents accidental exit of the piston.

With an indelible graduated scale according to the International System of Measurements.

In unitary container, sterilized by ethylene oxide.

Non-pyrogenic and latex free product, PVC and Phthalates.

For version with needle, contact the sales department.

Isothermal bags

Isothermal bags for the transport of biological samples, manufactured from PEVA, PE and polyurethane (foam). The isothermal bags have two functions: keeping the temperature of samples for 6 hours while being transported, whatever the climatic conditions; protecting the samples and their contents. Available in green.

Description: for added security, isothermal bags feature three different locks: by velcro (excepting 6 l model), by zip fastener and by a coded padlock. Bags include the following elements:

- An inner pocket designed to hold the cold packs,
- A transparent outer pocket, at the front of the bag, for laboratory identification,
- A transparent pocket, over the top of the bag, to insert documents.
- Two cold packs (except **900073** which incorporates only 1) consisting of HDPE packs filled with a non toxic gel.

Before use, place cold packs in the freezer and keep at $-20\text{ }^{\circ}\text{C}/-24\text{ }^{\circ}\text{C}$ for 24 hours.

Quality features:

- Bags manufactured from sturdy and shockproof materials.
- Stand out from other isothermal bags existing on the market for their lightness and convenience.
- Offer a total security seal thanks to padlock.
- Space-saving and supplied folded in to reduce volume by 50 %.
- To clean, simply use standard detergents.
- Corners are rounded and reinforced by a double seam. Handles are sewn all around the bag for increased strength.
- Isothermal bags are traditionally manufactured (non-automated production), and each product undergoes rigid quality controls.

Bottles for water sampling

Sterile bottles, designed according to ISO standards for sampling of consumption water.

Available with thiosulfate (microbiological analysis) and without thiosulfate (physico-chemical analysis).

Bottles are available in polyethylene or PET.

Capacities vary from 500 to 1,000 ml.

Different options available:

- Personalized labels,
- Individually bagged bottles,
- Special dosifications of thiosulfate,
- Other bottles or jars from the catalogue, etc.

See more information in chapter **Microbiology**

Cytology brush

Blue ABS shaft. For cervical specimen collection, designed for taking cell samples without damaging them.

Includes a soft tip to provide more comfort for patients.

Sterile model is sterilized by ethylene oxide and includes instructions.

Total length: 19.5 cm.

code		description	case quantity	case weight	case volume
440150		non sterile	50 x 50	3.55	0.009
440151	STERILE EO	individual peel-pack	2 x 500	3.23	0.029

Vaginal speculum

Made from ultra-transparent material that allows excellent total visibility during gynecological examination. Being single-use, they eliminate the risk of cross-contamination and infections. This way, cleaning, packaging and re-sterilization, which is required with traditional reusable specula, is avoided. Highly resistant, they offer maximum safety due to their design and manufacture.

Packaged in medical paper + plastic.

444150	STERILE EO	individual peel-pack	2 x 500	5.10	0.029

AYRE plastic spatula

Made of **autoclavable** polypropylene.

Rounded edges.

Sterile model is sterilized by **ethylene oxide** and include instructions.

Total length: 179 ± 1 mm.

code		description	case quantity	case weight	case volume
440142		non sterile	5 x 500	7.00	0.025
444142	STERILE EO	individual peel-pack	2 x 500	4.60	0.029
444242	STERILE EO	individual flow-pack	2 x 500	4.60	0.029

Minimum ordering quantity: 500.

06. TUBES, MICROTUBES AND CRYOVIALS

Round bottom polystyrene tubes

Manufactured from high technology, new generation moulds to ensure the reproducibility of each tube.
Tubes are made in one piece to ensure uniformity and dimensional accuracy from tube to tube.

mod.	code	dimensions mm	volume ml	case quantity	case weight	case volume	cases per pallet
1	300500	11 x 55	3	2 x 2,000	6.50	0.046	32
2	300300	11 x 70	4	3 x 1,000	6.20	0.045	32
3	300800	12 x 75	5	4 x 1,000	9.52	0.075	20
4	300800.2	12 x 75 thick wall	5	4 x 1,000	10.70	0.075	20

6	300400	12 x 88	6	4 x 1,000	11.30	0.082	20

Codes 300800 and 300400 are graduated (in-mould).

Suitable for centrifugation up to **7,500 xg**.
All tubes are suitable for laboratory use.
A complete range of test tube caps is detailed on page 155 of this catalogue.

Dimensions (±0.09)

code	internal diameter mm	external diameter mm	total length mm	maximum volume ml
300500	10	11.5	54.4	3.5

* Codes with internal graduations.

Codes **301213** (mod. 3) and **301212** (mod. 4) are flared at their top for easy pouring and have a special sedimentation base.

Codes **301200** (mod. 1), **401200** (mod. 2) and **301202** (mod. 7) have an external rim.

All models are suitable for centrifugation.
PS tubes: **7,500 xg**; PP tubes: **15,000 xg**.
Except code **301212** and **301213** to **3,000 xg**.

Other colours available on request, minimum order quantity is 6,000 units.

General features of our caps

Includes an internal chamber for more liquid filling, thus compensating for the loss of space inside the tube caused by the insertion of a cap.

code	internal diameter mm	external diameter mm	total length mm
3050	13.95	19.30	13.15

Includes a small internal chamber. Light-weighted. Ergonomical. Ribbed for a better handling while using gloves.

code	internal diameter mm	external diameter mm	total length mm
3053	10.00	11.85	11.30

Those three flange plug caps present significant advantages over other flange caps existing on the market.

code	internal diameter mm	external diameter mm	total length mm
3055	14.50	17.05	21.77
3072	15.40	17.00	21.60
3071	11.25	13.30	17.40

Light-weighted. Includes a lifting tab for easy opening.

code	internal diameter mm	external diameter mm	total length mm
3066		23.30	5.90

Includes a small internal cavity designed to prevent possible drop spillage. Ergonomical. Ribbed for a better handling while using gloves.

code	internal diameter mm	external diameter mm	total length mm
3058	10.60	15.00	15.30

One of the caps offering the largest chamber on the market, thus compensating for the loss of space inside the tube caused by the insertion of a cap.

code	internal diameter mm	external diameter mm	total length mm
3081	13.80	19.68	19.00

It has the same characteristics than the previous cap.

code	internal diameter mm	external diameter mm	total length mm
3082	14.55	20.45	18.50

12 ml screw cap tubes, round bottom

Made of **autoclavable (121 °C)** transparent polypropylene or polystyrene. Green cap made of high density polyethylene. **Dimensions:** 15 x 102 mm. The external skirt allows the tubes to remain **free-standing**. Supplied screwed. Recommended volume: 12 ml. The sterile model (ethylene oxide) is supplied individually in flow-pack bag, with indication of batch, expiration date, etc. According to the guidelines for sterile products.

Attention: For autoclaving, the cap should be loose on the thread and not tightly fitted.

Resistance to centrifugation:
PS: 7,500 xg. PP: 15,000 xg.

Sterile culture tubes in polystyrene

Tubes supplied with either a two position ribbed polyethylene cap, which can be left loose for aerobic work or sealed for anaerobic cultures. They are biologically inert, exempt from mold release agents, and at a temperature between **-190°C to 120°C**. Packaged in self-standing resealable zip-lock bags of 125 units.

Resistance to centrifugation: 1,400 xg

Loose position
for aerobic work

Sealed position for anaerobic
cultures

300808	17 x 100	14	8 x 125	7.14	0.060

15 ml and 50 ml centrifugal tubes

Made of polypropylene, suitable for both clinical and research applications.

Latex and heavy metal free material. **Only non-sterile models are free of DNase, RNase, ATP, human DNA and endotoxins.** High transparency of the material for a clear visualization during experiments specially for molecular biology.

Tube and cap designed with the system of flat threads for complete leakproof. Highly smooth hydrophobic surface for minimum disturbance during centrifugation. Silk-screen black graduation in the tube and large white frosted portion for easy writing.

Autoclavable at 121 °C.

Centrifugation resistance: **14.000 xg**, except code **429931: 7.500 xg** and codes **429950, 429951: 3.500 xg**

It is recommended to use adapters to centrifuge and avoid malformations.

Available models: 15 ml non-skirted and 50 ml skirted and non-skirted.

It is recommended that the centrifuge caps fit in size and shape to the tubes to be centrifuged.

15 ml and 50 ml conical tubes

Tubes made of transparent polypropylene, conical bottom. Suitable for centrifugation tests in immunology laboratories, microbiology, etc. With continuous thread and molded external graduation each 0.5 ml in 15 ml tubes, and each 5 ml in 50 ml tubes. Blue polyethylene cap with internal elastic obturation to assure an hermetical closure.

Resistance to centrifugation:

15 ml tubes, non sterile models until **7.000 xg**, sterile models **5.000 xg**. The 15ml tubes have a matt area.

50 ml tubes, non sterile models until **12.000 xg**, sterile models **7.000 xg**.

Sterile models are not suitable for autoclaving.

Non sterile models are **autoclavable at 121 °C**, with the cap positioned on the thread but uncapped.

50 ml tubes have skirted and non skirted models.

It is recommended that the centrifuge caps fit in size and shape to the tubes to be centrifuged.

New warehouse in Asia

Deltalab member of SCGP, has inaugurated a new warehouse in Thailand, the Deltalab Asia Hub.

This modern storage center, located in a free trade zone in Thai territory, houses products manufactured at the plant in Spain. The Deltalab Asia Hub will serve as a key redistribution point for customers in Southeast Asia and Oceania.

In this way, Deltalab member of SCGP, strengthens its competitive position in the region and significantly improves service to customers in the area.

GLASS TUBE RANGE

The high quality of our range of disposable glass culture tubes and screw threaded tubes is reflected in the uniformity of their wallthickness, shape of their bottoms, close tolerances, well formed bottoms and well moulded screw-neck. All of our tubes are fully treated at temperatures above **500 °C** to eliminate contamination, reduce breakage and increase strength. The majority of our tubes are packaged in plain outer cases. Each tube is polished individually.

Culture tubes:

They are available in either borosilicate or soda lime glass. Both glasses differ primarily in their chemical composition and their chemical resistance.

Borosilicate glass is a type of glass with a higher resistance to thermal shock. For this reason borosilicate glass is more suitable when tubes are intended to be heated or cooled rapidly.

Soda lime glass is a more economical alternative and suits for most culture medium, bacteriological and laboratory applications where the tube will not be subjected to extreme temperature changes.

Screw-neck tubes are ideal for tissue culture and general bacteriological work. Tubes are supplied with standard GPI finishes.

The screw – neck vials are made of borosilicate glass and are basically used for diagnosis, pharmaceuticals, chemicals, laboratory analysis, storage of liquids and powders. The caps presented are manufactured in autoclavable polypropylene with internal silicone joint.

Different packagings are available, depending on the model of tube:

Boxes: sturdy cardboard boxes. Each box contains small shrink-wrapped cases. Tubes are presented horizontally.

Trays: sturdy shrink-wrapped cardboard trays. Tubes are presented vertically.

Pressure cap for glass tubes

Made of polypropylene, **autoclavable** up to **121 °C**.
Recommended for glass tubes.
Codes **916100, 816100, 916150, 816150** and **816160**.
Vented caps (with inner flats).

code	recommended for tubes Ø mm	colour	case quantity	case weight	case volume
617402	16	naturel	4 x 1,000	5.15	0.059

Round bottom glass tubes

Made of **borosilicate** or **soda glass**.

The high quality of those tubes is reflected in the uniformity of their wall thickness and of their diameter and height dimensions.

Supplied in small quantities per case for a more convenient use in laboratory.

0.4 ml microtubes, Beckman® type

Manufactured in polyethylene.

It can be used at temperatures from **-50 °C to 75 °C**.

Dimensions: 5.50 x 47.50 mm (Ø x h), capped.

Withstand centrifugation up to **11,000 xg**

See our wide range of racks for microtubes in chapter **Sample Storage**

code	description	case quantity	case weight	case volume
900007	Beckman® type microtube 0.4 ml	1,000	0.63	0.004

0.5 ml microtubes, Vitatron® type

Manufactured in polypropylene.

Autoclavable. Graduated.

Easy handling caps: they can be opened and closed with one hand.

Dimensions: 7.87 x 31.8 mm (diameter x height) capped.

Withstand centrifugation up to **14,000 xg**

code	description	case quantity	case weight	case volume
900118	Vitatron® type microtube 0.5 ml	12 x 1,000	7.00	0.052

0.5 ml microtubes, Vitatron® type

Made of **autoclavable** polypropylene. Ideal for little sample volumes, microtechniques, microsedimentation, etc.

Suitable for transport, storage and freezing of biological samples.

Watertight closing system. Easy handling caps: they can be opened and closed with one hand.

Easily pierceable.

The rim in the inner part of the cap assures an optimum watertightness.

Resist temperatures from **-10 °C to 130 °C**.

Dimensions: 7,50 x 31,25 mm (Ø x h) capped.

Will withstand centrifugation up to **11,000 xg**.

code	description	case quantity	case weight	case volume
900117	Vitatron® type microtube 0.5 ml	14 x 1,000	7.30	0.069

0.5 ml microtubes

Made of ultra clear polypropylene. **Autoclavable.** Tubes have a frosted writing surface one side and on the closure area for better sample identification. Caps are easy to handle and can be opened and closed with one hand. Lids are easily pierceable. Tubes have moulded-in graduations in 100 µl increments from 0.1 to 0.6 ml.

Model **4092.1NS**, with a low adhesion surface, is specially designed for research procedures such as protein work and nucleic acid amplifications.

Made from special resins to minimise liquid retention and ensure optimum sample yield, thus eliminating the use of lubricants that may be harmful to samples. The proprietary formulation is completely **non-reactive**.

RNase, DNase and PCR inhibitors free.

Can be used from **-80 °C** to **121 °C**.

Dimensions: 30 x 8 mm.

Will withstand centrifugation up to **17,000 xg**.

code	description	case quantity	case weight	case volume
4092.1N	natural graduated	10 x 1,000	7.28	0.053
4092.1NS	low adherence natural graduated	10 x 500	3.42	0.028

Minimum order quantity: 1000.

Standard 1.5 ml microtubes

Made of ultra clear polypropylene. **Autoclavable.**

Attached flat caps.

Tubes can be easily opened and closed with one hand. Ideal for the storage and freezing of any kind of biological material (cells, sperm, bacteria, etc.).

Can be used at temperatures down to **-100 °C**.

Will withstand centrifugation up to **21,000 xg**.

code	dimensions Ø x h mm	colour	case quantity	case weight	case volume
200400	10.86 x 39.06	natural	5 x 1,000	5.40	0.051

200410	10.86 x 39.06	orange	5 x 1,000	5.40	0.051

1.5 ml microtubes

Manufactured in polypropylene. **Autoclavable.**

Easy opening and closing.

Graduated tube.

It features a frosted area for writing. Flat cap.

Will withstand centrifugation up to **21,000 xg**.

code	dimensions Ø x h mm	case quantity	case weight	case volume
200400P	10.2 x 39.9	12 x 500	7.4	0.055

1.5 ml safety lock microtubes

Made of ultra clear polypropylene. Featuring a special "snap-seal" secure lock. A special locking clasp with a distinctive audible snapseal design ensures tubes will not open during centrifugation. Tubes have a frosted writing surface one side and the attached closure for better sample identification.

Caps are easy to handle and can be opened and closed with one hand. Lids are easily pierceable. Tubes have moulded-in graduations in 0.5 ml increments. Resistant between -86 °C and 121 °C.

Autoclavable.

Withstand centrifugation up to **15,000 xg**.

code	dimensions Ø x h mm	case quantity	case weight	case volume
4092.4N	11 x 39	10 x 500	7.00	0.046

Premium 1.5 microtube. Safety lock

Same features as code 4092.4N besides is **free of DNA, DNase, RNase and pyrogens**.

Autoclavable. Can be used from -90 °C to 121 °C.

Withstand centrifugation up to **20,000 xg**.

code	dimensions Ø x h mm	case quantity	case weight	case volume
4092.5N	11 x 39	500	5.76	0.055

1.5 microtubes with secure lock pick-up tab

Same characteristics as code 4092.5N but these microtubes include a pick-up tab for easier handling without actually touching the tube.

Pierceable cap.

Autoclavable.

Withstand temperatures from -175 °C to 121 °C.

Withstand centrifugation up to **17,000 xg**.

code	colour	case quantity	case weight	case volume
4091.1N	natural	500	4.94	0.045

1.5 ml graduated microtubes. DNase, RNase free

Made of ultra clear polypropylene.

Autoclavable.

Featuring a frosted writing surface on the side and on the closure area for better sample identification. Caps are easy to handle and can be opened and closed with one hand. Lids are easily pierceable.

Can be used from **-170 °C to 121 °C**.

Dimensions: 39 x 11 mm.

Caps specially designed to reduce popping when centrifugation, freezing, boiling, storing or shipping is required.

- when the objective is to avoid liquid remaining on the wall of the tube, just push the cap slightly and a little centrifugation time is required.
- when centrifugation is required, push the cap firmly to achieve complete closure.

Certified RNase and DNase free.

Withstand centrifugation up to **20,000 xg**.

code	colour	case quantity	case weight	case volume
4092.2N	natural	10 x 500	6.82	0.048

Other colours under request. Minimum order quantity: 500.

1.5 ml microtubes. DNase, RNase free

Made of ultra clear polypropylene. **Autoclavable.**

Attached flat caps.

Graduated from 100 µl.

Tubes can be easily opened and closed with one hand. Ideal for the storage and freezing of any kind of biological material (cells, sperm, bacteria, etc.).

Can be used at temperatures from **-90 °C to 121 °C**.

DNase, RNase, DNA and PCR inhibitors free.

Dimensions (Ø x h): 10.7 x 39.1 mm.

Withstand centrifugation up to **20,000 xg**.

code	colour	case quantity	case weight	case volume
4092.3N*	natural colour	10 x 500	6.77	0.054
4092.3NS	natural colour, clear siliconised	10 x 250	3.70	0.026

2 ml microtubes with attached caps

Made of ultra clear polypropylene. **Autoclavable.**

Certified RNase and DNase free. Pyrogen-free.

Featuring a frosted writing surface on the side and on the closure area for better sample identification. Easy handling: tubes can be opened and closed with one hand.

Lids are easily pierceable.

Tubes have moulded-in graduations in 100 µl increments up to 2 ml.

Dimensions: 9 x 40 mm. Can be used at temperatures from **-90 °C up to 121 °C**.

Model **4092.6NS** has a low adhesion surface for special applications such as protein work.

Withstand centrifugation up to **17,000 xg**.

code	colour	case quantity	case weight	case volume
4092.6N	natural colour	10 x 500	7.27	0.053
4092.6NS	natural colour, clear siliconised	10 x 250	4.09	0.036

Minimum order quantity: 500 and 250 units respectively.

2 ml graduated microtube

Microtubes made of ultra clear polypropylene. **Autoclavable.**
2 ml graduated tubes with frosted area for writing.
Flat cap that features a secure lock with safety shield.
Easy handling with just one hand.
They can be used at temperatures from **-86 °C** up to **121 °C**.

Withstand centrifugation up to **10,000 xg**.

Please find racks for these microtubes on chapter
Sample Storage

code	dimensions Ø x h mm	case quantity	case weight	case volume
4092.7N	10.3 x 40.5	10 x 500	5.89	0.056

5 ml graduated microtube

5 ml microtubules are the perfect choice for intermediate volume between microcentrifuge tubes and 15 ml conical tubes.
Made of transparent polypropylene. The microtubes are graduated each 250 µL and are supplied with a matte band able to write in.
Flat cap is attached to the tube. Easy handling: microtube can be opened and close with one hand.
Can be used from Resistant to temperatures from **-80 °C** to **121 °C**.
Autoclavable. Free of DNA, DNase, RNase and PCR inhibitors.

Withstand centrifugation up to **25,000 xg**.

See **M-015** pag. 220

Screw cap microtubes, with cap. Sterile

Tubes and caps in medical grade, transparent polypropylene. The cap embodies a non-reactive ethylene-propylene o-ring. Suitable for **autoclave, liquid nitrogen (gas) and boiling processes**. Perfect for long term storage.

Withstand temperatures from **-190 °C**.

Graduated models feature a frosted area for writing.

The non-graduated model incorporates an external grip for an easy handling. Microtubes are supplied capped, in bags of 50 units.

Withstand centrifugation at **20.000 xg**.

COLD STORAGE

Screw thread microtubes

Made of transparent polypropylene. Suitable for use in liquid nitrogen, **autoclave** and for boiling applications, and can be used at temperatures down to **-190 °C**. **Certified RNase, DNase and PCR inhibitors free.**

Products ideal for long term sample storage. The codes **409111/4**, **409111/5** and **409111/6**, with external moulded slots for better handling with gloves.

Dimensions: 10.3 x 44.5 mm (except code **409111/2**: 10.3 x 43.6 mm).

Caps are supplied separately, see below.

Withstand centrifugation at **20.000 xg**.

mod.	code	description	graduation	case quantity	case weight	case volume

Screw thread tamper evident microtubes

Microtubes and caps are made of autoclavable ultra clear polypropylene. Ribbed cap with internal silicone O-ring for a positive **leakproof seal**. Super fast ¼ turn thread design. **Tamper evident** seal which notices if microtube has been opened. **Rnase, Dnase and Pyrogen free.** They can be used at extreme temperatures from **-196 °C** to **121 °C**. **Microtube dimensions:** 11 x 44 mm.

Cap dimensions (with tamper-evident ring): 15 x 9 mm.

Used on:

- Test of fertility and DNA testing
- Packaging of diagnostic kits and reagents
- Forensic laboratories

Withstand centrifugation at **17.000 xg**.

COLD STORAGE

STERILE CRYOVIALS

Tubes made of **autoclavable** polypropylene. Designed for the storage of biological material at temperatures as low as **-196 °C**. (Liquid Nitrogen but in gas state). Cryovials have printed graduations and feature a white marking area for sample identification. Caps and tubes have both the same coefficient of expansion, which further enhances their leakproof qualities at changing temperatures. Caps are manufactured in polyethylene¹ and embody a silicone O-ring that guarantees leakproof. Colour code inserts can be fitted into the caps for identification. **All cryovials are certified RNase, DNase and pyrogen free.** Cryovials are **sterilized by radiation** and are packaged in safety-lock bags of 100. Supplied capped.

Cryovials with external threads

Minimize liquid retention. Non skirted versions withstand centrifugation up to **17,000 xg**.

110 ml cryovial (code **401410**) features a polyethylene cap which does not accept inserts.

mod.	code	volume ml	skirt	dimensions mm*	case quantity	case weight	case volume

Colour coded inserts

Made of polypropylene. Very convenient for colour identification in freezers, on benchtops etc. Fit precisely into the caps of cryovials. They feature a little hole in order to help removing them from the cap. Not suitable for code **401410**.

code	colour	case quantity	case weight	case volume

COLD STORAGE

NON STERILE CRYOVIALS WITH EXTERNAL THREADS

Made of polypropylene. Designed for the storage and transportation of biological material. The external thread design provides a smooth and uniform inner surface, thus reducing the risk of contamination. Tubes can be **autoclaved to 121 °C** and withstand temperatures down to **-190 °C**. The closures and tubes are both manufactured of polypropylene having the same coefficient of expansion, which further enhances their leakproof qualities at changing temperatures. Cryovials withstand centrifugation up to **17,000 xg**. Skirted tubes are not recommended for centrifugation. Available with or without graduation and white band. Caps suitable for these cryovials are supplied separately, see code **409110** and series.

Cryovials printed without graduation

* Capped

Caps for the above tubes

Made of polypropylene. Featuring a long skirt and a special thread design allowing them to be removed or sealed with a single turn and assuring a better protection of the content. A silicone washer ensures a positive leakproof seal at all temperatures. Caps are made of polypropylene having the same coefficient of expansion as the above cryovials. See the previous page for colour inserts to fit into these caps.

SOLUTIONS FOR CRYOPRESERVATION

Wilmut offers a **wide range of biological sample storage tubes** that fit in the 96-well plate SBS standard format, and single tubes which are compatible with any freezing box format.

With volumes in between 0.5 ml and 1 ml and different options of codification that allows Wilmut system **adapt to the needs of any laboratory or biobank**. They are products designed and oriented exclusively to the user.

Main features

- It is the tube with more capacity in the minimum space: maximum space optimization of the freezers (from 15 % to 75 % of space saving)
- Maximum traceability: 2D datamatrix code, legible code at the tube, and bar code in the rack
- Traceability files available at www.wilmut.es or using software management

WILMUT tubes:

Made with high quality polypropylene, with volume indicator in the tube, **autoclavables at 121 °C** and allows storage up to **-86 °C**.

WILMUT Cryoboxes:

Polypropylene Cryoboxes with standard SBS 96-well format with security closers easy to open even when are frozen.

Accessoires WILMUT:

Wilmut has a large range of accessories to complete the range of coded and non coded tubes: caps, lockers, cappers, decappers, labels, scanners, etc.

Non Coded Tubes

Wilmut Seroteca (W-SER)

For users who need to process and store biological samples. Low adherence PP, low cytotoxicity and extractable levels, and **DNase, RNase, human DNA and endotoxines free**.

code	gross volume ml	net volume ml	presentation	min. order quantity	case quantity	case weight	case volume

* 10 racks to 96 tubes.

COLD STORAGE

Tubes with W-2D Datamatrix coding

Designed for laboratories and biobanks that need maximum security and requirements on the traceability and management of their samples.

W-2D tubes simplify the identification and traceability of the samples during the processing, storage and sending, while offering the highest standards of quality. We present a range of 0.65 ml and 1.40 ml volume tubes, with the possibility of choosing the type of coding that suits the laboratory requirements the best.

- **Laser engraved codes.** The codes are laser engraved directly on each tube so that the codes are permanent, non-transferable and unique.
- **2D Datamatrix coding on the tube.** For an automatic management of traceability using any scanner.
- **Human readable alphanumeric coding on the side of the tube.** For a visual confirmation of the traceability without the need of a scanner.
- **Solid one-piece construction.** Avoids the use of tags or liners that can rip or come off at low temperatures or because of an accidental fail.
- **DNase, RNase, human DNA and Endotoxines free.** Certified by an accredited external laboratory.
- **Low adherence in the interior of the tube.** Manufactured with low binding polypropylene to allow the lowest retention in the tube.
- **Volume visual indicator of the tube.** From 0.5ml to 1ml. Allows a visual identification of mistakes in the dispensation of volume.

W-2DRP | Tubes with coding and Right Position System

W-2DRP tubes have an exclusive coding system that visually links the tube code with the rack code and moreover every tube has a defined position on the rack.

MANAGEMENT OF TRACEABILITY

- Downloading of data files through the website. Avoids the scanning of the rack to register it in the management software downloading a file through the data file of the rack, which includes the codes and position of the tubes in the rack.
- Files are compatible and can be integrated with the management software and the aliquot equipment.
- Editable files in excel or TRX format to print or save.
- File management by reading the code of the tube or rack. There are 2 options: manual introduction of the code or by the reading of the rack barcode.

COLD STORAGE

Metalic cryoracks for sample storage

Made with high quality materials compatible and adaptable to any storage format: boxes, racks, tubes, moulds, etc., and all types of cryostorage equipment: refrigerators, freezers, deep freezers, nitrogen tanks, walk in cool rooms, etc. We produce all sort of metallic racks: vertical, horizontal, cell system racks, tray racks, etc., including also customized solutions to adapt to the customer needs.

Horizontal metal racks

Horizontal racks in hi-performance stainless steel type AISI 304. With FB system of no-slip trays for easy storage and search of samples. Maximum size of the boxes to storage: 55mm height and 136 mm width

code	number of trays	measures (Z x Y x X) mm	type A boxes capacity (90x130)	type B boxes capacity (135x135)	type C boxes capacity (135x270)	weight	volume

Sample storage system

96 round bottom tubes, supplied in twelve strips of eight tubes each, held in a rack with lid. Rack, lid, tubes and caps are made of **autoclavable** polypropylene, manufactured with the **SBS** standard footprint. Compatible with all robotic applications and multichannel pipetting systems.

Alphanumeric numbered wells, indelibly printed in black, allowing identification in short light conditions. **DNase, RNase, DNA and PCR inhibitors free.** Used for serial dilutions, mixing, storage and harvesting of cells, cell growth for cell culture assays and DNA screening, and as an ideal long-term storage system. Caps are sold separately in strips of eight units; every cap has a tag to make an easy opening and closing.

Tube dimensions (height): 8 x 44 mm

Rack dimensions (with lid): 128 x 86 x 48 mm

code	description	case quantity	case weight	case volume

409011	strips of 8 caps each	125 strips	0,11	0,012
409012	loose tubes	1.000	0,63	0,005

Sample storage system

Compact sample storing system. It consists on a blue rack with a translucent lid, holding 96 loose round bottom tubes (1,2 ml) arranged in 8 x 12. Robotics suitable version (**RC845TP**). **Autoclavable** and stackable, it resists up to **-100 °C**, and embodies a moulded alphanumeric identification.

Rack, lid and tubes made of polypropylene. Caps made of low density polyethylene.

Caps are sold apart in strips of eight units; every cap has a tag to make an easy opening and closing.

Tube dimensions (height, closed): 8,8 x 45 mm.

Rack dimensions (with lid): 118 x 82 x 50 mm.

DNase, RNase free. *Pyrogen Free.

code	description	case quantity	case weight	case volume

845	tubes in bulk	1.000	0,60	0,004

COLD STORAGE

Sample storage system

It consists on a white rack and a transparent lid, with 96 tubes (12 x 8) 1.2 ml (capped, 1.1 ml).

Tubes and rack are manufactured in polypropylene, being autoclavable.

Caps in non **autoclavable** polyethylene.

Caps are acquired apart, in strips on eight units.

It is ideal to work with robots and multichannel pipetting systems, as well as for sample transport, storage, or freezing (it can withstand up to **-80 °C**).

It stands up the majority of chemical agents.

Both lid and rack embody an alphanumeric identification. The top left edge of the lid is cut for an exact orientation.

Tube dimensions (capped): 9 x 48 mm.

Rack dimensions (with lid): 126 x 81 x 53 mm.

According to **SBS** standard.

code	description	case quantity	case weight	case volume

08. LIQUID HANDLING

Our range of tips meet almost every liquid handling need, as they are available in a wide scope of options:

- Made of polypropylene
- With or without filter in bulk or rack (with hinged, sliding, or free lid).
- Sterile, DNase and RNase free, with Standard or Extra filter, in rack.
- Sterile, without filter, packed in individual bag.

Tips without filter

The perfect aid for a **safe, easy, quick and accurate** liquid handling.

- Low retention
- Autoclave resistant
- Good subsection
- High transparency
- Uniformity
- Free of metals
- Traceability

Our self-manufactured tips are compatible with most pipettes available on the market. For each model in this catalog, we specify its compatibility with the main pipette brands. However, it is important to note that pipette cones from the same brand may vary depending on the model or year of manufacture. We recommend that users consult with our sales department or request samples before using the tips with new pipette models.

Types of presentation

Individually wrapped flow-pack

Tips in bulk

Refill for reusable racks

Rack for tips

Rack for long tips

Rack for macro tips

All our tips and racks are made of **autoclavable** polypropylene, although it is not recommended to autoclave tips with filters.

If you autoclave tips without filters, it is recommended to do so in the rack to avoid deformations.

Tips with filter

The filter tip avoids aerosols and prevents pipette and / or sample contamination.

1. It **purifies the air** that goes through the filter, **removing aerosol and contaminants**
2. It partially **absorbs the sample** in case of overaspiration (10-20%)
3. It **protects the sample** from an accidentally **non sterile pipette**

0.1 - 10 µl tip

Natural colour universal crystal tip, graduated. Gilson® type.
Rack made of **autoclavable** polypropylene up to **121 °C**.

Recommended for use with:

Colour codes:

● RNase and DNase free ● Metal free ● Pyrogen free

1 - 200 µl tip

Natural colour universal tip. Designed to work with viscous fluids like glycerol or thick tissue homogenates. Suitable also for fragile cellular structures, minimizing the risk of tearing or rupture.

Recommended for use with:

Eppendorf®, Socorex®, Nichiryo®, Finnpiquette®, Biohit®, Oxford®, Pipetman®, Rainin®, Costar Corning®, Volac®.

code	description	sterile	case quantity	case weight	case volume
● 327-40	tips in bulk	no	10 x 1,000	4.20	0.020

Minimum unit sale: 1 bag.

5 - 200 µl tip

Eppendorf® universal tip.

Rack made of **autoclavable** polypropylene up to 121 °C.

Suitable (not exclusive)

Eppendorf®, Gilson®, Brand®, Biohit®, Dsg®, Elkay®, Finnpiquette®, Genex®, Jencons®, Nichiryo®, Socorex®, HTL® and Handrop®.

Robotic and conductive tips for TECAN

Manufactured in clean room class ISO 8.
Racks and tips in conductive polypropylene.
Free of DNase, RNase and endotoxins.

High precision tips.

The conductivity allows the system to recognize the filling height and guarantees a minimum immersion of the tip in the liquid, to ensure safe pipetting and dispensing.

Recommended for use with: Tecan Genesis® and Tecan Evo Freedom®.

code	description	rack colour	tips number	case quantity	case weight	case volume

318003	1,000 µl conductive tip	●	96	5 x 2	2.00	0.0046

For transparent models, please contact the sales department.

Robotic Tips for Qiagen (300µl and 1,100µl)

Manufactured in clean room class ISO 8.
Racks and tips in conductive polypropylene.
Free of DNase, RNase and endotoxins.

High precision tips. The conductivity allows the system to recognize the filling height and guarantees a minimum immersion of the tip in the liquid, to ensure safe pipetting and dispensing.

Recommended for use with: BEP 2000®, Biorobot®, Elysis Quattro®, Etimax®, Evolis®, Triturus® and others.

LIQUID HANDLING

Single channel and variable volume NICHIPET PREMIUM pipettes

Single channel and variable volume NICHIPET PREMIUM pipettes. These white or pink pipettes have the same features as NICHIPET EXII, and the following advantages:

Nozzle with a high level of tolerance to abrasion, ceramic piston made of non-corrosive materials, and body made as solvent resistant. 4 position to lock the volume. *HyperBlow* system to improve dispensation efficiency.

Body designed to minimize fatigue and corrosion resistance ejector.

5-year warranty

Single variable volume NICHIPET EXII

1 Fully **autoclavable** and UV rays resistant blue or yellow pipettes. Easy digital volume setting. Ceramic piston for volumes bigger than 200 μl . Easy lock with one hand and thermal insulation of the handle. Easy calibration. PTFE Chamber that maintains its tightness and reproducibility for a long time.

2 Model **EXII Plus** is specifically designed for using with chemical solvents without any danger of corrosion. A Perfluoro rubber O-ring is installed in **Nichipet EXII Plus**.

LIQUID HANDLING

Circular support to house 6 single-channel pipettes

Made of ABS

Recommended for use with:

Nichipet premium LT, Nichipet Premium, Nichipet EX II, Nichipet EX Plus II and Nichiryo Le.

code	case quantity	case weight	case volume
MLTSTD2	1	0.407	0.0057

Handrop® stand for pipettes

The linear and round stands have been designed to fit perfectly Handrop digital pipettes.

The stands are convenient to hold up 6 pipettes both of single and multi-channel.

Dimensions: 287 x 276 x 143 mm.

code	case quantity	case weight	case volume
999802	1	0.40	0.002

Pipetting reservoir

Reservoir specially designed for use with multichannel pipettes. Made of polystyrene.

See our plates for liquid handling on chapter **Cell culture. Molecular biology**

M-211	100 ml	STERILE R	100	1.99	0.060

Double-sided pipetting reservoir

Double-sided reagents reservoir.

By one side is a multichannel reservoir that allows pipetting up to 12 different reagents and by the other side is an only reservoir to use with one reagent type. Easy pour-spouts.

It incorporates a lid.

Made of polypropylene **autoclavable** up to 121 °C.

code	description	case quantity	case weight	case volume
M-205	Double-sided reagents reservoir	25	1.07	0.008

Graduated pipettes

Made in transparent, inert and low density polyethylene.

Sterile models are ethylene oxide sterilized.

Volumetrical tolerance: $\pm 10\%$.

LIQUID HANDLING

General purpose pipettes

Pasteur pipettes of **small volume** made from transparent, inert, and non-toxic low-density polyethylene (LDPE). Low adhesion surface. Volumetric tolerance $\pm 10\%$.

The **fine-tip models** are excellent for dispensing micro volumes and small drops. They can be frozen in liquid nitrogen.

Fine-tip types:

- Ultracapillary: 210003, 210004, 210023, and 210024
- Fine: 210002 and 210022
- For test kits: 210003, 210023, 210022 (e.g., HIV, pregnancy; serum separation mainly in pediatrics, filling chromatography vials, microvials, microplates, gels in electrophoresis, ELISA, etc.)
- For techniques: 210024 (PCR, ELISA, DNA samples, protein assays, hybridomas, atomic absorption, and all types of additions in microtechniques, electrophoresis, etc.)

Codes 210023, 210022, and 210024 are presented in individual peel-pack packaging sterilized by ethylene oxide. The product code, batch number and expiry date are printed on the paper side of the pack.

Codes 210003, 210002 and 210004 are supplied in non sterile bags.

Glass Pasteur pipettes with open an closed tip

In neutral soda glass, closed at the tip and with cotton in the mouth. The opening of the closed part is simple, by lightly pressing with the fingers.

Open tip measurements:
 Ø of the mouth: 6.95 ± 0.15 mm
 Ø tip: 1.2 ± 0.15 mm
 thickness: 0.53 ± 0.03 mm

Closed tip measurements:
 Ø of the mouth: 7.0 mm
 Ø of the tip: 1.4 to 1.6 mm
 thickness: 0.50 mm

Sterile serological pipettes

Made of glass polystyrene. Single use only.
Serological pipettes have an accuracy of +/- 2% at full scale.

Sterilized by radiation.

Manufactured in one, two or three pieces depending on the volume.

They guarantee maximum precision without liquid retention at the welding level and offer total dispensing. Pyrogenic, non-cytotoxic and non-hemolytic. Volumes from 1 ml to 50 ml, identified with a polyolefin (does not contain synthetic fibers) white cotton and screen printed in colour according to volume. The peel-pack of the models presented in this way is fiber-free and easy to open. Black graduations, bright and unalterable. Negative scale and double inverted scale (ascending and descending graduations).

DNase and RNase free.

Manufactured in a room with controlled environment, class 100,000.

BSE / TSE free.

This product does not contain latex.

Three models of tips available:
A = TAPE END,
B = WIDE TIP,
C = OPEN TIP
(recommended for viscose samples).

Find trays, rotary stands and other products for pipettes in chapter **Safety and General Labware**

See our plastic Pasteur pipettes in chapter **Liquid Handling**

Please find racks for these tubes in chapter **Sample Storage**

Pipetting nipple

Designed for pipetting with plastic and glass pipettes.

	code	material	total length mm	Ø max. mm	capacity ml	bag quantity	bag weight	bag volume
1	193914	latex	40	10	3	100	0.22	0.002
2	19195	silicone	40	15	1.5 - 1.8	50	0.22	0.0009

Pipetting bulb

This one-handed design is the simplest safety pipette filler to use available. Manufactured in natural orange rubber. Approx. drawn capacity: 25 ml. Single hand use, only two operating points. Evacuate via the automatic valve. Standard model, accommodates all pipettes. The inside bulb can be cleaned by removing the patented valve and rinsing out.

1. Evacuate the air by pressing the bulb, as the drawing indicates.

2. Intake by pressing on point B ⤴

3. Drain the liquid by pressing on point A ⤵

4. Blow out the pipette by pressing as the drawing indicates (point C).

code	description	bag quantity	bag weight	bag volume
19200	pipetting bulb	1	0.05	0.0004

Pipetting bulb

Made of rubber. Used to avoid mouth pipetting and contamination risk. Can be opened, cleaned and **autoclaved**. Ideal for Wintrobe and Westergren pipettes.

code	description	bag quantity	bag weight	bag volume
19201	red pipetting bulb	1	0.04	0.0002

Pipette trays

Made of white PVC.

Resistant to temperatures from **-20 °C to 80 °C**.

Model 1, code **19252**, is perfect to fit inside drawers. It includes four compartments that can hold up to thirty pipettes of 1, 2, 5, or 10 ml.

Model 2, code **19996**. Sixteen pipettes up to 10 mm diameter can be accommodated longitudinally; laterally, seven pipettes up to 20 mm diameter. Tray edges are ergonomically designed for a better handling. It is also useful with other instruments.

mod.	code	dimensions mm	case quantity	case weight	case volume
1	19252	426 x 300 x 30	1	0.53	0.006
2	19996	283 x 216 x 40	6	1.38	0.017

Pipette pumps

Several models for various pipette volumes.

Designed for fast and efficient pipetting with simple, one handed operation.

Pipettes fit smoothly into collar.

Rotate the knurled thumb wheel on the side for precision filling or dispensing, and press the fast release lever for quick emptying.

Easy to use and easily disassembled for cleaning.

Sizes are colour coded. Pipette pumps resist acids and alkalis.

Presentation in individual box.

See our chapter **Sample storage**

09. SAMPLE STORAGE

Polystyrene racks for cryovials

Made of **polystyrene**, those boxes are designed to hold 1 and 2 ml cryovials at temperatures from **-80 °C** to **80 °C**. Stackable.

Boxes with white base and numbered inner rack. Boxes are stackable and have air vents.

Covers are keyed to the base to prevent misalignment.

Each box is supplied with an innovate vial picker for easy vial removal.

Dimensions: 133 x 133 x 52 mm.

Capacity: 81. **Ø wells:** 12.8 mm.

code	colour	capacity	case quantity	case weight	case volume
M-036B	●	81	4	0.62	0.0045
M-036AM	●	81	4	0.62	0.0045

Polycarbonate racks for cryovials

These racks provide ultra low temperature storage (from **-196 °C** to **121 °C**), holding 2 or 5 ml cryovials (depending on the model).

Compatible with other storage systems, they can be sterilized using **autoclave** protocols.

They can also be immersed in liquid nitrogen, where its design means minimal issues with excess liquid on their removal.

* The capacity of codes M-064V and M-064AM is halved when used with capped cryovials with external threads.

SAMPLE STORAGE

Polycarbonate racks for cryovials

Made of extra strong polycarbonate, these boxes are designed to be used at temperatures between **-190 °C** and **121 °C** and are **autoclavable**. Racks can hold either 81 or 100 tubes from 1 ml to 5 ml. They can be immersed in liquid nitrogen. Transparent covers are printed with an alphanumerical grid.

- Boxes made to accept 81 tubes have a white base and a coloured grid (in which each well is numbered) (**A photo**).
- Boxes made to accept 100 tubes* have a coloured base, with each place numbered in the lid, instead of a grid (**B photo**).
- Each box is supplied with an innovative vial picker for easy vial removal (**C photo**).

Boxes are stackable and have air vents. Covers are keyed to the base to prevent misalignment. The racks have boxes of 12x12 mm.

Rack 9x9 height 45

Polypropylene rack. Dimensions with lid: 133 x 133 x 45 mm. Available in fluorescent colours with transparent lid to help identification. **It resists -100 °C** and is **autoclavable** up to **121 °C**. Sections will hold 81 microtubes (0.5, 1.5 or 2 ml) or cryotubes (1.2 ml) up to 12 mm diameter and 42 mm height. The capacity is reduced when storing external screw cryotubes. It embodies an alpha numeric grid printed on the base and over the upper rims for a clearer identification of samples.

Suitable for tubes: **200400, 200401, 200405, 200407, 200410, 4092.2N, 4092.5N, 4092.6N, 4092.6NS, 409001.**

SAMPLE STORAGE

Rack 8x8 round hole height 45

Polypropylene rack, **autoclavable** up to **121 °C**.

Dimensions with lid: 133 x 133 x 53 mm.

Available in fluorescent colours with transparent lid to help identification.

Resists -100° C.

Sections will hold 64 microtubes (0.5, 1.5 or 2 ml) or cryotubes (1.2 ml) up to 11 mm diameter and 42 mm height.

Alphanumeric identification.

Suitable for tubes: **4092.1N, 4092.1NS, 4092.2N, 4092.5N, 4092.6N, 4092.6NS, 200400, 409111/1.**

SAMPLE STORAGE

Freezing cardboard storage box, pre-assembled compartments

Designed for storage and preservation of frozen samples. Made of white treated cardboard and covered by special white paper hand-stuck and hand-assembled for a better quality. Pre-assembled compartments.

Temperature range between -196°C and 121°C. There are alphanumeric identifications printed on each box.

The boxes are presented assembled inside.

Adaptable to horizontal freezer racks.

Rack 4x4 height 45

Polypropylene rack.

Dimensions with lid: 67 x 67 x 45 mm.

Available in fluorescent colors with transparent lid. It can be frozen up to **-196 °C**, and **autoclaved up to 121 °C.**

16 sections (15x15 mm)

It may be used with taller tubes as the lid lies on their caps (up to 60 mm high).

Suitable for tubes: screw cap microtubes (range **409110.1** for example), cryovials (as code **409001**), snap cap microtubes type Eppendorf® (see codes **200400** or **4092.2N**), and short tubes (codes **300500, 400500, 401100**).

SAMPLE STORAGE

Reversible racks with removable handles

Made of polypropylene, **autoclavable** up to **121 °C**.

Dimensions: 223 x 67 x 27mm

The racks have two sides for different tubes: one side holds up to 80 tubes of 12 mm diameter (for example 10 x 75 mm or 12 x 75 mm tubes, microtubes, etc.) and the other side holds up to 60 microtubes or PCR tubes (8 mm Ø, 0.2 or 0.5 ml).

By removing the handles, units can be firmly anchored laterally to one another and more units can be added on top of each other, thanks to small pins supplied with the racks.

M-563NA	●	10	1.60	0.008

80 well racks

Made of **autoclavable polypropylene**, those racks are designed for freezer storage and are rated to **-80 °C**.

Racks are designed to accommodate microtubes of diameter up to 11 mm. They are space-saving, as they feature 80 wells in a 5 x 16 configuration. An alpha-numeric matrix allows accurate sample identification.

Lateral handles allow easy handling of the racks. Racks can be used alone or placed into the box **M-011.1** (made of translucent plastic).

Racks are compatible with the Gilson FC80 dispenser, for example.

Isofreeze Rack with temperature indicator

Manufactured from **polypropylene**, this rack is filled with a non-toxic gel that maintains **4 °C** temperature for almost three hours and a half when the rack is removed from the freezer (or in case of freezer failure), protecting PCR reagents, cells, enzymes, etc. from fast temperature changes.

Moreover, the plastic changes its colour from green to yellow as long as the temperature of the rack changes (see figure). It can hold up to 96 0,2 ml single microtubes, strips, and plates.

Dimensions with lid: 141 x 99 x 44 mm.

Dimensions without lid: 141 x 99 x 38 mm.

ATTENTION: Freeze for a minimum of eight hours at **-20 °C** before use. Keep it covered while being used. Store at the freezer while not being used.

See our PCR tubes and plates in chapter **Cell culture. Molecular biology**

Rack at room temperature

Rack at -20 °C

PCR racks with lid

Base and cover made of **autoclavable polypropylene**.

Designed for storing and working 0,2 ml PCR tubes, separate or in strips. 96-well plates can also be accommodated. Both base and cover have an alphanumeric identification.

Once covered they are stackable.

Racks can be horizontally attached to each other in order to build-up any configuration.

Dimensions with cover: 132 x 91 x 32 mm

It withstands from **-90 °C** to **121 °C**.

The wells are conical with **diameters** of 6mm and 4mm.

SAMPLE STORAGE

24 well incubation rack

Made of **autoclavable polypropylene**.

This floating rack will incubate up to 24 microtubes in a water bath and can accommodate either 0.5 ml or 1.5 ml tubes.

Tubes are held snugly and then released when the rack is pressed down on a benchtop.

The rack is alphanumerically labelled for better sample identification.

Dimensions: 119 x 78 mm.

code	description	case quantity	case weight	case volume
M-022	incubation rack	4	0.29	0.0024

Round incubation racks

Made of **autoclavable polypropylene**, those racks are designed to hold either 8 or 20 microtubes (1.5 ml) in 10.8 mm holes.

Even when the rack is fully loaded, tubes are completely immersed while tops rest above the rack, floating in a beaker of water.

Perfect for use in benchtop incubation.

The rack is easily unloaded by lightly pressing it down against the bench until the legs touch, releasing the tubes.

Racks are 6.4 mm thick with 19 mm long legs and a central handle.

code	capacity	Ø rack	case quantity	case weight	case volume

IsoFreeze reversible racks with lid

Manufactured from virtually unbreakable **polycarbonate** and filled with a non-toxic gel, those Isofreeze temperature maintenance racks provide consistent thermal protection for PCR reagents, cells, enzymes or other temperature sensitive agents when removed from the freezer or refrigerator for extended periods of time, and provide safe storage on the event of freezer failure.

Each rack can accommodate up to 20 1.5/2.0 ml microtubes on one side (Ø holes: 12.1 mm), or 20 0.5 ml microtubes (Ø holes: 8.33 mm) on the reverse side.

Racks feature a transparent lid for better sample viewing. Each well in the rack is numbered. Available in two temperature ranges.

Model **M-570** (white) will maintain a temperature of **0 °C** on the bench top for 5 hours.

Model **M-571** (blue) will maintain a temperature between **-10 °C** and **-20 °C** on the bench top up to 3 hours.

Dimensions with lid: 172 x 180 x 70 mm.

SAMPLE STORAGE

20 well interlocking tube racks

Made of blue **autoclavable polypropylene**.

These racks slide together on both sides to allow the user to attach several for larger experiments.

They are designed to accommodate 1.5/2.0 ml Eppendorf® type tubes on two levels of 10 wells each of 10 mm Ø, with easy-to-read numbers for better tube viewing and identification.

The innovative front finger slot makes them easy to handle when working with gloves. **Dimensions:** 210 x 90 x 48 mm.

PCR workstations

Autoclavable manufactured in polypropylene. This storage/working rack, with lid, is designed to work with different PCR volumes at the same time. It can accommodate up to 32 individual 0.2 ml PCR tubes (Ø: 6,35 mm), 16 0.5 ml microtubes (Ø: 8,20 mm) and 24 1.5/2.0 ml (Ø: 11,43 mm). Tube wells are alpha-numerically matrixed with raised bold type for accurate sample identification. The rack also has a transparent lid for easy viewing of samples. Frosted writing panels on four sides allow labelling or writing. The rack is supplied with a removable rack accommodating 0.2 ml PCR tubes. The removable rack can be purchased separately: see product code below.

Dimensions: main rack: 215 x 118 x 50 mm.

Removable rack: 125 x 85 x 15 mm.

Both racks withstand from **-90 °C to 121 °C**.

Stacking PCR work up rack

Autoclavable polypropylene. The stacking PCR work-up rack is a robust and convenient workstation or storage rack for plates, strips or tubes.

Dimensions with lid: 98 x 138 x 39 mm.

Dimensions without lid: 98 x 138 x 30 mm.

It withstands from **-90 °C to 121 °C**. The conveniently small footprint ensures it is an equally useful tool whether it is used on the bench, in the freezer or some other laboratory situation. The positive click ensures the lid will not become easily dislodged. Yet only a gentle squeeze on each side will allow you to lift off the clear lid. It accommodates every different type of 0,2 ml PCR plate; including fully skirted types, strips or tubes. The imaginative shaping of the rack's feet make this system easy to use, providing a stable platform as well as enabling **stacking with or without the lid** and whether the vessels are open or sealed.

The racks are manufactured in distinctive colours and are packaged as an assortment.

COMBI Rack for PCR tubes

The box is made of (**non autoclavable**) PVC and the rack is made of **autoclavable** polypropylene. Rack and box can be used both together and separately.

The box: can be used not only as a storage rack but also as a work station. The white base accepts both 96 and 384 well plates and a transparent cover.

It is stackable, and its low height helps to save space. Lid dimensions: 108.0 x 148.6 x 35.6 mm. Box dimensions: 108.0 x 148.6 x 24.9 mm.

The rack: can hold up to 96 PCR tubes or plates or 12 strips of 8 tubes with caps. Each hole is identified with an alpha numeric numbering system.

It features a writing area. It is stackable.

Can withstand temperatures from **-80 °C to 121 °C**.

Dimensions: 84.6 x 125.5 x 28.9 mm.

STAINLESS STEEL RACKS AND BASKETS

For over 40 years we have been producing stainless steel racks and baskets by hand. We use the highest quality materials to obtain excellent racks as a final product, both in terms of finish, strength, robustness and durability. The base of the racks is made of very robust, dense stainless steel mesh.

We can optionally manufacture most models with a side plate for identification.
For transporting samples we can manufacture them with a safety cover.

SAMPLE STORAGE

10. HYGIENE, SAFETY AND GENERAL LABWARE

Classification of sanitary waste by type:

Type I waste: medical waste treated as municipal waste. Easy management (cardboard, paper, office equipment, kitchens, garages, gardening and non-infectious patients waste).

Type II waste: non specific medical waste. Preventive measures in the handling, collection, storage and transport in the field of health center (dressing materials, plasters, clothing and single-use material contaminated with blood, secretions and/or excretions).

Type III waste: specific health waste or risk waste. Preventive measures in the handling, collection, storage, transportation, treatment and disposal, as they may pose a health risk to workers and the public. They can be divided into 5 groups: medical waste or infectious anatomical waste, blood and blood products in liquid, needles, sharps and live attenuated vaccines.

Type IV waste: waste specified in singular regulations. Subject to especial requirements from the point of view of hygiene and environment. Include: cytostatic waste, chemical residues, expired pharmaceuticals, minerals and synthetic oils, waste metals, radioactive waste and human anatomical remains entity.

Source: NTP 372 – Spanish National Institute of Safety and Health at Work.

Safety containers

Containers manufactured with virgin raw materials enabling incineration; four and six liters containers are made in autoclavable polypropylene, the rest in polyethylene. **Suitable for solid waste type II and III.**

They are made of a body bearing the hazard warning label, and two lids:

- The first offers an entire opening, taking advantage of the total diameter of the mouth of the container; very useful to throw away bigger volume waste. May be closed hermetically and definitively
- The secondary one presents a partial opening, which may be closed temporarily or definitively. It embodies two devices in order to easy the extraction/ disconnection of dental and analytical needles, and a 70 x 42 mm rectangular hole. All containers, except code **241500**, embody a handle.

mod.	code	capacity l	material (body and lid)	Ø mouth mm	Ø base mm	height mm	case quantity	case weight	case volume	cases per pallet

Safety containers

These containers are manufactured in virgin raw materials enabling incineration. Suitable for solid waste type II and III. They are made of a body bearing the hazard warning label, a handle, and two lids, allowing two using options:

- Total opening, taking advantage of the total diameter of the mouth of the container; very useful to throw away bigger volume waste
- Partial opening, 120 mm diameter, usable for syringes, contact plates, and midsize waste

Code **240028** is total opening only.

mod.	code	capacity l	material (body / lid)	Ø mouth mm	Ø base mm	height mm	sales unit	sel.ut. weight	sel.ut. volume	cases per pallet

3	240028	26	PP / PP	322	278	391	10	9.71	0.100	100

In accordance with ONU standards and major European standards.

Safety labelling

Permanent adhesion labelling to alert from risk or danger. Labels are shiny and fluorescent. In compliance with international safety standards. Recommendable temperature of use:

- Codes **901531**, **901533**: from **-50 °C** to **105 °C**

mod.	code	description	bag quantity	bag weight	bag volume
1	901531	roll of 500 labels (labels size 25 x 25 mm)	500	0.07	0.0002
2	901533	bag of 10 units 200 x 250 mm	10	0.06	0.0010

Needle collection container

Made of high density polyethylene. Instructions for use (in English and Spanish) are printed on the containers. Capacity: 1 l. It features two caps. The first one has a mouth which embodies three different devices to remove needles. The other one is designed to close the container temporarily or definitively.

code	colour	dimensions mm	case quantity	case weight	case volume
90	yellow	Ø mouth 70; Ø base 100; height with cap 173	76	7.90	0.150

Safety containers

Design that aims to reduce sharps injuries by bringing boxes as close to the point of care as possible in trays designed with multiple depressions. Sharps are safely disposed of at the "point of use", eliminating many risks of injury. Made from recycled plastic.

Fit for purpose and tailored to the demands of all types of healthcare and technical departments such as treatment rooms and laboratories and technical facilities.

One-handed disconnect. Strong handle for carrying.

Puncture resistant.

Autoclavable at 134°C for 18 minutes, with the lid open.

A
mod. 1, 2, 3

Oval opening for syringes and lancets.

B
mod. 4

Removal of needles with non return system and luerlock and pen needles.

C
mod. 5, 6, 7

Five kinds of aperture: a wide one to discard elements of medium size; another one designed to remove scalpel blades; one to remove luerlock and blood collection systems; to remove butterfly and luerlock needles and the last one for insulin pen.

Complies with ISO 23907-1:2019; TRBA 250 and ADR UN 3291 standards. Directive 94/62/EC on Packaging and Packaging Waste. Law 11/1997 on packaging and packaging waste.

These models are constantly updated; design can be slightly modified.

Rectangular waste container (PP)

Made of yellow, perforation resistant, virgin polypropylene. Suitable for solid or semi-solid waste, II and III groups. Lids feature a central handle for a better handling in the daily use and also while carrying containers. Secure closure thanks to their fourteen closing points. Lateral handles for further help carrying. Can be incinerated with no release of toxic fumes. Stackable when empty, or full and closed. Minimum wall thickness: 2.5 mm. Closing sealed for air and gas.

Manufactured following new French Standard NFX 30 505.

Cardboard waste containers

Cardboard containers with lid, designed for storage and disposal of group II solid and semi-solid waste. With an integrated low density polyethylene bag (stuck in their interior). They can be incinerated without release of toxic fumes. The lid features two seals. One temporary that will avoid unpleasant smells and eliminate the risk of contamination while using the container. The second one is a definitive, positive seal: closing the bag with a belt already included, sealing the lids, and reinforcing them with an adhesive tape. These containers embody lateral handles.

Model 2, code **270055**, 50 l capacity, is made of cardboard 2.7 mm minimal thick. PEBD 60 µ bag, adhered to the base and the walls. **Its height allows users not to need to lean forward as they throw away waste.** Easy to assemble thanks to its auto-mountable bottom. A maximum filling line is printed on its body.

Model 3, code **270060**, 50 l capacity, is manufactured in **reinforced cardboard, double thickness** (4 mm minimum). PEBD bag 54 µ adhered to the base. Safe closure with the help of raised edges. Both are printed with the biohazard anagram and text; assembling and closing instructions and drawings; identification form, and standards. Suitable for liquid and solid products or products with a certain level of humidity. Containers are supplied folded up for space-saving. Those containers are not suitable for needle disposal. For this purpose see the special containers on previous pages.

In accordance with UN ADR (road transport), and manufactured pursuant new French Standard NFX 30 507.

Sterilization indicator tapes

Self-adhesive sterilization indicator tapes made of semicreped paper. It sticks on different surfaces such as plastic, metal, fabrics, paper, cardboard, etc. The tapes have high tack adhesive and they offer good resistance to heat and moisture. Also, the tapes are resistant and it is hard to break them.

1. Code 191049

Tape designed to check what individual units have been exposed to Ethylene Oxide (EO) sterilisation. Also, it is used to distinguish between sterilized and non sterilized units during their storage. The orange printed stripes turn yellow after ethylene oxide EO sterilization, by the following specifications:

- Exposition to 600 mg/l EO and 60% of relative humidity (RH) for minimum 20 min. at **54 °C**.
- Exposition to 600 mg/l EO and 60% of relative humidity (RH) for minimum 25 min. at **37 °C**.

2. Code 191048

Tape designed to use with individual units, to check if the units have been exposed to dry heat/poupinel sterilisation, and to distinguish between sterilized units and non sterilized units during their storage. It must not be used in wet processes. Signals in V shape convert themselves from green to brown when it has been sterilized according to the following specifications:

- Exposition in dry air at **160 °C** or more for minimum 40 minutes.

3. Code 191047

Tape designed to be used with individual units to show that they have been exposed to steam (autoclave) sterilisation, and to distinguish between sterilized units and non sterilized units. Not to be used in any other process than steam sterilisation (autoclave). The tape is lead free. The printed stripes change colour from light green to medium dark green after the sterilisation of the tape by the following specifications:

- Exposition at **121 °C** for 15 min.
- Exposition at **134 °C** for 10 min.

mod.	code	type of sterilisation	length. m	width mm	case quantity	case weight	case volume
1	191049	ethylene oxyde gas	50	19	12	0.324	0.009
2	191048	dry heat (poupinel)	50	19	12	0.324	0.009
3	191047	autoclave	50	19	12	0.324	0.009

Expiration date Mod. 1: 24 months from the production date.

Expiration date Mod. 2 & 3: 30 months from the production date.

Sterilization indicator tapes

For steam **autoclave**.

Resistance to coldness: **-40 °C**.

Model 1: The tape has printed on it **CONTAMINATED**.

After sterilisation to **121 °C** the word **STERILIZED** appears.

Model 2: The tape has printed on it **-Batch, -Con. (Control) and -Date**.

After sterilisation to **121 °C** the word **STERILIZED** appears.

Bags for Autoclave

Printed with the biohazard graphic symbol and instructions of use in five languages. Do not close the bags hermetically when placing them in the autoclave a **121°C**.

Code 200100 is made of an autoclavable polyethylene, while the rest of the codes are manufactured in autoclavable polypropylene.

code	dimensions cm	materiel	aprox. capacity l	tickness microns	bag quantity	bag weight	bag volume
200310	30 x 60	PP	12	37.5	500	5.99	0.013

Minimum order quantity: 50.000 pieces.

Autoclave resistant red bags

Heavy duty, high impact biohazard bags made of a 0.055 mm thick high molecular weight polypropylene blend.

They are **autoclavable to 138 °C**, saving autoclave time.

Bags printed with the standard biohazard warning symbol and warning procedures in four languages: English, Spanish, French and German.

They feature a **sterilization indicator** patch that darkens when exposed to steam sterilization. Do not close the bags hermetically when placing them in the autoclave.

Coloured adhesive tapes for sample identification

Ideal for use in freezers, autoclaves, etc. Peel off without leaving a sticky residue. Withstand temperatures from **-50 °C** to **130 °C**.

High resistance to oils, acids, water, etc.
Suitable for glass, plastic, paper, metal and rubber surfaces.

Can be marked with pencil, ball-point pen, etc. All tape models are 19 mm wide.

The code **191220** is a 8 roll tape metal dispenser that accepts 13 m rolls. The dispenser has the following **dimensions**: 31x7x13 mm. 55 mm tapes not compatible.

19386	glasses	12	0.69	0.004

Emergency eyewash bottle

Made of low density polyethylene, the bottle is flexible and easy to squeeze. The bottle has an eyecup with a snap-on cap. The eyecup has a perforated plate to break up the stream providing a gentle spray to the eye. A capped air vent valve prevents drawback of contaminated eye wash into bottle. Contaminated wash exits through a drain tube, which rotates in any direction.

Instructions for use printed in various languages.

Bottle capacity: 1 l.

Supplied empty.

code	capacity ml	case quantity	case weight	case volume
19384	1,000	1	0.26	0.004

Pipetting bulb

This one-handed design is the simplest safety pipette filler to use available. Made of natural orange rubber. Approx. drawn capacity: 25 ml. Single hand use, only two operating points. Evacuate via the automatic valve. Standard model, accommodates all pipettes. The inside bulb can be cleaned by removing the patented valve and rinsing out.

code	description	bag quantity	bag weight	bag volume
19200	pipetting bulb	1	0.05	0.0004

Pipetting bulb

Made of rubber. Used to avoid mouth pipetting and contamination risk. Can be opened, cleaned and **autoclaved**. Ideal for Wintrobe and Westergren pipettes.

code	description	bag quantity	bag weight	bag volume
19201	red pipetting bulb	1	0.04	0.0002

Pipette pumps

Several models for various pipette volumes. Designed for fast and efficient pipetting with simple, one handed operation. Pipettes fit smoothly into collar. Rotate the knurled thumb wheel on the side for precision filling or dispensing, and press the fast release lever for quick emptying.

Easy to use and easily disassembled for cleaning. Sizes are colour coded. Pipette pumps resist acids and alkalis.

Presentation in individual box.

Wash bottles

Made a combination of high and low density polyethylene. Translucent bottle, with HDPE cap (blue), delivery tube and seal cap (natural).
Bottle caps are ribbed for a better handling.
High resistance to all liquids, acids and bases.
Include a large neck for safe and easy filling.

code	capac. ml	neck mm	base mm	height mm	case quantity	case weight	case volume

Wide mouth wash bottles

Translucent low density polyethylene bottles, with screw cap and delivery tube available in 4 different colours (natural, blue, yellow and red) for easy identification. Feature a one piece cap and delivery tube assembly, thus eliminating air or liquid absorption through the cap. Include a wide neck for safe and easy filling. Ribbed caps for a better handling while opening and closing. Moulded-in graduations.
250 ml model is graduated in 25 ml increments, 500 ml model, in 100 ml increments.

Integral wash bottles

Made of translucent polyethylene. Feature a one piece cap and delivery tube assembly, which eliminates air or liquid absorption through the cap and ensures a positive leaktight seal. To increase liquid flow, cut the tip of the delivery tube; close the tip by means of the cap attached to the delivery tube. Caps are ribbed for a better handling while opening and closing. Tagging points on neck and cap for a tamper proof closure. Bottles include a fill in line.

Wood tongue depressors

Tongue depressor with smooth rounded edges. Made from high-quality wood to provide a smooth, splinter-free finish. Odour and taste-free. Maintains a high tensile strength. In addition to their traditional use, depressors can be used for spreading balms and ointments, for stirring liquids or mixing medicine, etc. The sterile models are supplied with "instructions for use".

Size: 15 x 1.8 cm.

Absorbent paper

This 125 g/m² absorbent paper provides a total protection thanks to its two layers. The top side consists of a layer of cellulose of great liquid absorption power; the reverse side consists of a layer of polyethylene ensuring that it is completely waterproof. For use in the following applications:

- laboratory trays and tables protection.
- seed germination (between-paper method).
- spillage recovering using its leaktight surface.
- particularly suitable for working with materials that are valuable (precious metals) or hazardous (toxic or corrosive materials)

Paper thickness: 0.250 mm. Absorption: 240 g/m². Klemm absorption: 86 mm.

code	description	case quantity	case weight	case volume

120002	50 x 50 cm sheets	1 x 100 sheets	2.90	0.008

Filter paper

Our range of filter paper reams is made from high quality cellulose fibers to ensure a good resistance to humidity and a high absorption capacity. Pore diameter: ± 30-40 microns. For use in the following applications:

- laboratory worktop protection
- simple filtering operations for varied products
- labware sterilization
- pharmaceutical product preparation

NEW	3	C05 without lid, without handle	1 l	70	6.71	0.150	16

* Supplied with bag with printed "instructions for use".

Bed pan

Made of copolymer polypropylene with white dye, using an injection process. This material is highly resistant to bleaches and detergents, knocks and tears. It can withstand 120°C without deformation.

Rounded edges to prevent cuts. Especially suitable for hospital use, as it can be sterilised by autoclave and is suitable for washing in automatic washing machines due to its design and physicochemical characteristics.

The product is presented in a single low-density polyethylene bag, printed according to EN ISO 15223.

Capacity: 2000 ml.
Unit weight: 435 ± 2.5% g.

code	dimensions mm	case quantity	case weight	case volume	cases per pallet
19586	430 x 93	20	10.69	0.140	12

Supplied with "instructions for use".

Dental containers

Manufactured in polypropylene and intended for the hygienic storage and preservation of dental prosthesis, orthodontic sections and dental splints. It has flexible and waterproof walls and closure system by means of a front flange.

The open container is stackable, which reduces the space of storage, and stackable once closed, thanks to the projections in the base and the lid.

Contact the sales department for individual packaging.

Nitrile gloves

Single-use gloves made of blue nitrile. Powder-free. Non sterile.

Suitable for medical and laboratory use. Supplied in convenient dispenser boxes of 100 units. Opening box with pre-dilled area at the top. Easy and convenient removal of the glove. Indication of height in dispenser box and carton. Maximum safety and waterproof gloves, they are three times more resistant than latex gloves. Ambidextrous and ergonomic.

Beaded cuff, reinforced ensuring easy installation and preventing it from rolling. High sensitivity to touch. Finish: microtextured outer surface on the fingertips, it provides greater grip strength. Chlorinated inner surface, smooth and comfortable. Use temperature range: -20 °C to 50 °C. Free of protein. Made of materials suitable for food use.

Made of **TPX®**. **Autoclavable up to 170 °C.**
In compliance with ISO 6706 standard.

TPX® is a trade name of Mitsui Plastics Inc. PTX (polymethylpentene) is a lightweight, high-temperature polyolefin with exceptional acoustic and electrical properties. TPX has low moisture absorption and excellent chemical resistance.

Burette clamps

Made of **autoclavable polypropylene**. Clamps can fit onto rods \varnothing 8 to 14 mm. Stainless steel centre arm includes a spring and firmly holds in place the burette by means of rubber pads. Burette clamps do not obscure graduations. Suitable for all burettes. Base is supplied separately.

mod.	code	description	case quantity	case weight	case volume
1	19139	for 1 burette	5	0.22	0.006
2	19140	for 2 burettes	5	0.32	0.013

Rectangular base for burettes

Base made of **autoclavable polypropylene**, with chromium plated steel rod. Rods can be screwed one onto the other to obtain different heights. All models come with 2 rods of \varnothing 250 x 12 mm. 2 models available: base with central hole, and base with off centre hole.

mod.	code	description	case quantity	case weight	case volume
3	19266	base with central hole and + 2 rods	1	0.75	0.001
4	19267	base with off-centre hole and + 2 rods	1	0.80	0.005

Rods available separately. Please contact our sales department.

Pipette stand

Material: **polypropylene**. Consists of a rounded base with a rod, and a circular pipette stand to hold up to 28 pipettes.

Base and pipette stand are supplied separately.

- Code **19262**, rounded base with rod, is specially designed to hold the pipette stand.
- The stand code **19265** accommodates 18 pipettes \varnothing up to 10 mm, and 10 pipettes \varnothing up to 15 mm.

The lower disc has little holes for liquid draining. The ring included with the stand allows its raising and lowering on the rod.

See chapter **Microbiology**

code	description	case quantity	case weight	case volume
19262	rounded base	1	0.24	0.002
19265	18 small and 10 large holes stand	1	0.35	0.007

Rotary pipette stand

This stand which can hold 94 pipettes consists of 2 discs rotating on a central vertical axis for convenient pipette selection. The lower rotating disc has tapered sides and open bottoms to protect tips and allow water run off. Rotating discs are 18 cm diameter.

The pipette stand comes unassembled with instructions for quick and easy assembly.

Material: **polypropylene. Autoclavable.**

Can accommodate all our serology pipettes presented on page 41 and 204, except the 25 ml model.

code	dimensions mm (\varnothing x h)	case quantity	case weight	case volume
19254	230 x 480	1	0.39	0.005

Flask weight ring

Heavy vinyl covered ring ideal to improve stability of Erlenmeyer flasks in water bath. High chemical resistance.

code	erlenmeyer capacity	internal Ø mm	quantity	weight	volume
192470	125 - 500 ml	48	1	0.32	0.0003

192472	500 - 2,000 ml	57	1	0.64	0.0004

Vacuum pump

Material: **polypropylene**. This vacuum pump combines excellent suction capacity with limited water consumption, under low pressure (0.5-1 kg/cm²) as well as high pressure (10 kg/cm²). The built-in, non return valve protects the pump from possible water back-flow. **Autoclavable**. Can be disassembled for easy cleaning.

code	description	quantity	weight	volume
191395	water jet vacuum pump	1	0.03	0.00001

Minimum order quantity: 1.

Pipette and burette rinsing set

Made of **polyethylene and polypropylene**. Can hold pipettes and burettes of length up to 60 cm. Ensures a fast, safe washing. Ideal for use in labs where caustic and toxic materials are used.

Suggested sets:

For pipettes	1 x 19217
	2 x 19219
	1 x 19218
For shorter pipettes	1 x 19217
	1 x 19221

code	description	height mm	Ø mm	case quantity	case weight	case volume
19217*	pipette washer	734	165	1	3.35	0.08000
19218	pipette jar	650	165	1	1.80	0.04200
19219	pipette basket	650	130	2	2.00	0.02600
19221	pipette jar	500	165	1	1.50	0.03000

* Code 19217 requires a 13mm inner diameter tube. It is not included.

Drying rack

Wall mountable high impact polystyrene drying rack for general labware. This rack is made of a single mould 4 mm plate with 72 peg sockets.

Push-in pegs can be placed in any configuration on the rack, and are easily removable to accommodate odd shaped items.

Peg sockets have closed ends to avoid dripping and eliminate the risk of biological contamination.

Rack suitable for items with diameter of the mouth larger than 15 mm.

A **drip channel** collects dripping that drains via a drain tube provided. Includes 11 additional peg sockets (Ø 6 mm) for smaller parts.

Comes complete with a mounting kit and fixing template.

Peg sockets Length: 100 mm

code	dimensions mm	case quantity	case weight	case volume
19213	450 x 630 x 110	1	4.00	0.045

Drying rack

PVC coated steel wire drying rack for general labware.

It embodies 55 pegs, and 5 brackets specially designed to hold erlenmeyer flasks and beakers. Pegs are plastic coated for better protection.

Two rings on the rack allow the rack to be mounted on the wall.

It includes a tray in order to avoid drops on the surfaces where the rack is placed.

The protectors can be either red or blue in colour.

Peg sockets Length: 90 mm

code	dimensions mm	case quantity	case weight	case volume

PVC Pipette tray

Made of white PVC, resistant to temperatures from $-20\text{ }^{\circ}\text{C}$ to $80\text{ }^{\circ}\text{C}$. **Model 1**, code **19252**, is perfect to fit inside drawers. It includes four compartments that can hold up to thirty pipettes of 1, 2, 5, or 10 ml.

Model 2, code **19996**. Sixteen pipettes up to 10 mm diameter can be accommodated longitudinally; laterally, seven pipettes up to 20 mm diameter. Tray edges are ergonomically designed for a better handling. It is also useful with other instruments.

See our range of pipettes on pages 45 and 205.

Silicone tubing. Non toxic

Silicone for numerous applications in laboratories, medicine, pharmacy and industry. Excellent transparency. No smell. Chemical excellence in general. Excellent durability. Excellent mechanical properties. Made with materials suitable for food use. Material free of latex, phthalates and BPA. **Autoclavable.**

General technical characteristics:

Material: Silicone elastomer (VMQ) for high temperature vulcanization (HTV). Service temperature: -40° to 200°C. Tips up to 250°C. Hardness: 60° (+/-5) Sh A. Water-repellent and non-stick. Gas permeable. Excellent resistance to UV rays, oxygen, ozone. Good thermal insulator.

* See the sketch.

Flow indicator

Material: SAN. Perfectly transparent.

The rotation of the red ball allows an immediate visual indication of glass or liquid flow. Very useful for connecting tubes of different diameter from 6.5 to 10 mm.

	code	dimensions mm	tubing mm	bag quantity	bag weight	bag volume
1	19538	102 x 14 x 57	6.5-10	5	0.07	0.0002
2	19539*	90 x 15 x 40	6-11	5	0.08	0.0004

*Not for use with corrosive fluids or temperatures over 85 °C.

Cylindrical or octahedral stirring bar assortment pack

Assorted cylindrical or octahedral stirring bars supplied in a convenient transparent plastic box including dividers for magnet classification.

Box includes 2 units of the following stirring bars:

Code 19400: (diameter x length in mm): 8x13, 8x15, 10x25, 10x38, 10x51 and 10x64.

Code 19400.1: (diameter x length in mm) 6x10, 4,5x15, 6x20, 6x25, 6x30, 8x40, 8x50, 10x60, 10x70.

code	description	quantity	weight	volume
19400	box with 12 octahedral stirring bars	1	0.25	0.0006
19400.1	box with 18 cylindrical stirrings bars	1	0.25	0.0006

One-hand timer

60 Minute times model "Onehand" non-slip surface. Can be rewound with one hand only.

code	description	Ø x h mm	quantity	weight	volume
19901	one-hand timer	72.5 x 29.5	1	0.24	0.0003

Digital timers

Digital timer with hours, days and months, 24 h. programme facility, 60 seconds, alarm, includes clip and small bench stand.

These digital timer count forward and down. Both include a LR44 battery.

Code **900400** includes instructions in English and German and code **900600** includes instructions in Spanish, English and French.

MAGNETIC STIRRING BARS

This section details our vast range of PTFE magnetic stirring bars. A variety of different sizes and colours is available.

- **Micro stirring bars:** for use in the smallest containers.
- **Cylindrical stirring bars:** these are the most common and lend themselves to many general applications. The diameter of the bar chosen will depend on the diameter of the flask used although it is recommended to select the largest stirring bar possible to achieve optimum results.
- **Octagonal stirring bars with pivot ring:** ideal where the base of the container may be slightly curved or irregular.
- **Triangular stirring bars:** these are used primarily to help dissolve solids or sediments. Also used for higher viscous liquids.
- **Ovoid stirring bars:** used in rounded bottom or Erlenmeyer flasks.
- **Special shape stirring bars:** cruciform stirring bars are used in round bottom tubes.

Stirring bar retriever

Polypropylene coated.
For the removal of stirrer magnets from vessels of all kinds.
Includes a magnetic tip, so it is easy to remove the magnets.

High-quality laboratory glassware

Deltalab presents its new and complete range of laboratory glassware, designed to meet the needs of our customers.

The Dglass range stands out for its high quality and is made up of graduated flasks and pipettes, as well as graduated beakers, test tubes and bottles. These products are characterized by their high durability, precision in measurements and resistance to chemicals.

The entire Dglass range is made from transparent glass with a resistance equal to or greater than HGB3. In addition, they have quality certifications according to the ISO 17025 standard, which guarantees their total reliability in the laboratory.

All graduation marks are made using dyes or enamels tested to meet the requirements of the ISO 4794 standard.

All products can be cleaned manually or using an industrial washing machine. However, to reduce the erosion of the glass and graduations, we recommend gentle cleaning with low-alkalinity detergents at a temperature below 70°.

Volumetric flask

CLASS AS volumetric flasks made of borosilicate glass 3.3 and certified as standard per piece. Adjusted by content (IN).
Produced in accordance with ISO 1042 standards.
Calibration certificate accredited to ISO 17025, on request.

Glass Pasteur pipettes with open an closed tip

In neutral soda glass, closed at the tip and with cotton in the mouth.
The opening of the closed part is simple, by lightly pressing with the fingers.

Open tip measurements:
Ø of the mouth: 6.95 ± 0.15 mm
Ø tip: 1.2 ± 0.15 mm
thickness: 0.53 ± 0.03 mm

Closed tip measurements:
Ø of the mouth: 7.0 mm
Ø of the tip: 1.4 to 1.6 mm
thickness: 0.50 mm

Graduated pipette

Graduated pipettes made of Soda-lime standard glass with serial certificate per piece. Pour-adjusted (Ex).

Graduated pipettes, class AS, are manufactured with a 5s hold time, pour-adjusted (EX + 5s) with colour-coded identification card.

Produced in accordance with ISO 835 standards.

Available with Schellbach stripe for better reading accuracy.
Calibration certificate accredited to ISO 17025, on request.

code	description	capacity ml	quantity	weight	volume
725	Graduated pipette class AS	1 ml	5	0.166	0.0010

Bottles for sterilization

Made of soda glass 3.3. **Autoclavable** up to **140 °C**.
 Graduations printed in white colour. Screw caps (**GL45**) made of blue polypropylene.
 Ribbed screw caps for a better handling. Drip ring on bottle neck to avoid dripping. Ideal for chemical reagents and culture media.
 They can be used to freeze substances up to **-40 °C**.
 It is recommended to freeze them in an inclined position (ca 45°) and filled up to max. 3/4.

Produced in accordance with ISO 4796 standards.

11. LABORATORY AND INDUSTRIAL PACKAGING

Polyethylene wide mouth jars with lid and insert plug

Cylindrical jars made of **high-density polyethylene**, with a ribbed screw-on lid and stopper. Body and stopper in translucent natural colour and standard black lid. Supplied unthreaded (except for sterile models, which are supplied covered and bagged).

Sterilised under minimum order of 6 boxes per model. Sterile by radiation (sterile models).

Made of materials suitable for food use.

* This model is supplied with lid.

Please consult minimum order and delivery time for other body or lid colours. They can also be supplied in individual bags.

Polyethylene beakers

Volumes available range from 60 ml to 1,000 ml.

All models come without lid, except the 1,000 ml beaker, which is available with or without lid.

For use with liquid and solid samples. Manufactured in a flexible material for easy pouring.

Jars with lid

Body and lid in white **autoclavable polypropylene**.

Self sealing security lid.

Code **241013**, **241014** and **241015** embody a plastic handle.

Jars are supplied uncapped.

Cases per pallet: 24, excepting code **241010**, palletized in 40 cases.

Made with materials suitable for food use.

Graduated narrow neck bottles

Made of translucent **polyethylene**.

Designed for the storage of acids and bases. Include a ribbed screw cap for a better handling, and an insert plug.

Feature sloping shoulders for easy pouring.

Tagging points on neck and cap for a tamper proof closure and for labeling.

Bottles have the following moulded-in graduations: code **19317**, every 10 ml; **19319**, every 20 ml; **19323**, every 25 ml, **19324**, every 50 ml, **19325** and **19326**, every 100 ml.

Supplied capped.

Drum with screen and childproof cap

Made of white colour **high density polyethylene**.

They embody a handle and a graduated screen which allows the user to see the content.

Childproof, tamper evident, ribbed screw cap with insert plug.

Drums are supplied non screwed.

Dimensions: 132.5 x 187 x 290 mm

Made with suitable for food use and ADR approval.

code	capacity l	total cap. ml	Ø int. mouth mm	body weight g	case quantity	case weight	case volume	pallet quantity

Cylinder with handle

Made of **polypropylene**. **Autoclavable at 121 °C**.

The handle provides a secure, solid grip for superior control, specially when handling large volumes.

Pouring is safer and more convenient, as the cylinder is specially designed to ensure a total liquid delivering. 89 x 29 mm hand opening for easy handling.

Hexagonal base to prevent tipping and rolling.

Accurate and easy to read graduated double scale on the cylinder.

Stackable drum with tamper evident screw cap

Made of **high density polyethylene**.

It is provided with a sealing screw cap with grip.

This drum has four flat sides suitable for sticking information labels.

They are differentiated by two main characteristics: they can be easily stacked joining the tops and the bottoms together, and they can be palletised thanks to their reduced overall dimensions.

All of them are **ONU ADR** compliant, meeting all the standards for the transport of hazardous, toxic and noxious products.

Made with materials suitable for food use.

Wide mouth storage drums with tap and plug

Body and cap made of **polyethylene**. Screw cap with non hermetical plug. Using Teflon at thread tap is recommended to ensure a complete sealing. They embody a tap, and two black folding handles at the top. Not designed to transport liquids. External mouth diameter: 150 mm.

Industrial drums

These drums are produced in **high density polyethylene**. Their particular top, which has a **perfectly stiffened rim obtained** during the moulding phase, prevents the opening from becoming deformed and the lid from becoming detached as a consequence of any drops or violent shocks.

They feature a metal washer that ensures a perfect closure also suitable to place a tamper evident seal.

Thanks to their **airtight seal**, they are **suitable for transport by sea, road or railway** and, thanks to their construction characteristics and qualities; they **fully meet the current ONU ADR standards for transport of hazardous products**.

Incinerable (excluding the metal closure).

These drums are produced using selected top-quality raw materials, they feature excellent drop-impact resistance even at low temperature (−20 °C) and stability against corrosion from chemical agents which may cause stress cracking.

Their **internal surface is perfectly smooth**, and this makes it easy to fully empty and completely clean the inside from any powder, paste or semi-dense products. All references have two handles for easy carrying except code **208128**.

STERILISATION METHODS

TYPES OF STERILIZATION

METHOD	Dry heat	Autoclave, Super Heated Steam under pressure	Ethylene Oxide ("EO Gas")
PROCEDURE	Direct action of dry heat. For example: 171 for 60', 160 for 120' or 140 for 180'.	Action of 3 elements: temperature, water steam and pressure 121 °C (20') (+1 atm)	Exposure of the material to the gas for a time that can reach up to 8h, at a temperature between 40°C and 50°C and with a relative humidity between 50% and 60%.
RECOMMENDED FOR	Glassware, metals and liquids.	Glassware, fabrics, liquids etc. All materials resistant to heat above 121°C and moisture.	All materials with some exceptions. It is often used when materials to be sterilized are sensitive to steam or radiation.
PRECAUTIONS	High temperatures may damage fragile metals.	It is not recommended for some types of plastic. In the case of closed containers, the caps must not be adjusted (steam must be allowed to enter and exit easily).	Requires a subsequent ventilation to ensure sterilised products are free of residual gases that may be toxic.
LIMITATIONS	The own material's limitations. High heat soaking may unacceptably affect material properties.	Generally for low volume products.	Ethylene oxide is toxic and explosive.

STERILE A STERILIZATION TYPE: in this case the parts are not sterilized at the end of its manufacture process since is the process by itself which is able to obtain a sterile product. This is because the entire process from injection of different plastic components to the assembly is protected by a sterile atmosphere, thanks to the cowl of the entire installation and the placement of laminar flows that create an overpressure sterile air inside the facilities.

CENTRIFUGATION

Conversion G y R.P.M.

The **relative centrifugal force (RCF)** can be determined using the formula:

$$FCR = 1.118 \times 10^{-6} \times r \times n^2$$

r= radius of the rotor (mm); distance between the axis of the rotor and the farthest wall of the tube.

n= rotating speed (revolutions per minute).

The result is expressed in terms of acceleration (g); 1 g is equal to 9.807 m/s².

It is recommended that the centrifuge caps fit in size and shape to the tubes to be centrifuged.

CONVERSION (°F - °C - °K)

°F (Fahrenheit) = (°C x 1.8) + 32	°C (Celsius) = (°F - 32) x 0.556	°K (Kelvin) = °C + 273.15
-----------------------------------	----------------------------------	---------------------------

TYPES OF STERILIZATION

METHOD	By ionizing radiation (gamma rays)	By ionizing radiation (beta rays)
PROCEDURE	Photons emitted by the radioisotope Co-60.	High energy electrons generated in a particle accelerator.
RECOMMENDED FOR	Widely used in industries to sterilise single use material. Sterilisation doses are calculated from bioburden counts.	Widely used in industries to sterilise single use material. Sterilisation doses are calculated from bioburden counts.
PRECAUTIONS	Limitations in some applications, as some material properties may be unacceptably altered by this method.	Limitations in some applications, as some material properties may be unacceptably altered by this method.
LIMITATIONS	The effects are cumulative, so the material that has been sterilized by this method cannot be re-sterilized by many other conventional methods (eg ethylene oxide), after its initial use.	The electron beam has limited penetration power, so the density of the product to be sterilized must be taken into account. The effects are cumulative, so the material that has been sterilized by this method cannot be re-sterilized by many other conventional methods (eg ethylene oxide), after its initial use.

The sterilization indicator labels are small round stickers that change their colour when the material is properly sterilized:

Radiation: from yellow to red.

Ethylene oxide: from violet to green.
